Introduction xix

Part I General Properties of Fields; Scalars and Gauge Fields 1

1 Short Review of Classical Mechanics 3
1.1 A Note on Conventions 3
1.2 Lagrangean and Equations of Motion 3
1.3 Systems with Constraints 5
1.4 Canonically Conjugate Momentum and Conservation Laws 6
1.5 The Hamiltonian Formalism 7
1.6 Canonical Transformations 9
1.7 Poisson Brackets 10
1.8 Hamilton–Jacobi Theory 11
Further Reading 12
Exercises 12

2 Symmetries, Groups, and Lie algebras; Representations 14
2.1 Groups and Invariance in the Simplest Case 14
2.2 Generalizations: Cyclic Groups and Their Representations 16
2.3 Lie Groups and Abelian Lie Group Invariance 18
2.4 Lie Algebra 19
2.5 Representations for Lie Groups 21
Further Reading 22
Exercises 23

3 Examples: The Rotation Group and *SU*(2) 24
3.1 Rotational Invariance 24
3.2 Example: $SO(2)$ 25
3.3 $SO(3)$ and Its General Parametrization 26
3.4 Isomorphism of $SO(3)$ with $SU(2)$ (Modulo $\mathbb{Z}_2$) 28
3.5 Construction of Representations of $SU(2)$ and Invariant Theories 30
Further Reading 34
Exercises 34

Table of Contents
More Information

4 Review of Special Relativity: Lorentz Tensors 36
4.1 Special Relativity and the Lorentz Group 36
4.2 Characterizing the Lorentz Group 38
4.3 Kinematics of Special Relativity 39
4.4 Dynamics of Special Relativity 41
4.5 Relativistically Covariant Lagrangeans 42
Further Reading 45
Exercises 45

5 Lagrangeans and the Notion of Field; Electromagnetism as a Field Theory 46
5.1 Fields and Lagrangean Densities 46
5.2 Maxwell's Equations in Covariant Formalism 47
5.3 Euler–Lagrange Equations in Field Theory 49
5.4 Lagrangean for the Gauge Field A_μ 50
5.5 Adding Sources to Maxwell's Equations and Their Lagrangean 52
Further Reading 53
Exercises 53

6 Scalar Field Theory, Origins, and Applications 54
6.1 Scalar Fields and Their Equations of Motion 54
6.2 Constructing Lagrangeans 56
6.3 Specific Models (Applications) 59
Further Reading 63
Exercises 63

7 Nonrelativistic Examples: Water Waves and Surface Growth 65
7.1 Nonrelativistic Scalar Action 65
7.2 Hydrodynamics 66
7.3 Water Waves 68
7.4 Korteweg–de Vries (KdV) Equation and Solitonic Water Wave 70
7.5 The Kuramoto–Sivashinsky (KS) Equation 71
7.6 Growth of Surfaces 72
Further Reading 73
Exercises 73

8 Classical Integrability: Continuum Limit of Discrete, Lattice, and Spin Systems 74
8.1 Classical Integrability 74
8.2 Examples of Integrable Systems 75
8.3 Classical Integrable Fields 77
8.4 Spin Systems and Discretization 78
Further Reading 80
Exercises 80

More Information

9 Poisson Brackets for Field Theory and Equations of Motion: Applications 81
9.1 Symplectic Formulation 81
9.2 Generalization to Fields 83
9.3 Examples 85
Further Reading 87
Exercises 88

10 Classical Perturbation Theory and Formal Solutions to the Equations of Motion 89
10.1 General Formalism 89
10.2 Polynomial Potential 91
10.3 Diagrammatic Procedure 92
10.4 Noncanonical Case: Nonlinear Sigma Model 94
Further Reading 96
Exercises 96

11 Representations of the Lorentz Group 97
11.1 Characterization of the Lie Algebra of the Lorentz Group 97
11.2 The Poincaré Group 99
11.3 The Universal Cover of the Lorentz Group 100
11.4 The Wigner Method and the Little Group 100
11.5 Representations in Terms of Fields 102
11.6 The Double Cover of $SO(3,1)$ as $Sl(2,\mathbb{C})$ and the Definition of Spinors 105
Further Reading 107
Exercises 107

12 Statistics, Symmetry, and the Spin-Statistics Theorem 108
12.1 Statistics 108
12.2 Rotation Matrices in Different Lorentz Representations 110
12.3 The Spin-Statistics Theorem 112
12.4 Symmetries 114
Further Reading 117
Exercises 117

13 Electromagnetism and the Maxwell Equation; Abelian Vector Fields; Proca Field 118
13.1 Electromagnetism as a $U(1)$ Gauge Field 118
13.2 Electromagnetism in p-Form Language 120
13.3 General p-Form Fields 123
13.4 The Proca Field 124
Further Reading 125
Exercises 125

14 The Energy-Momentum Tensor 127
14.1 Defining the Energy-Momentum Tensor 127
14.2 Conservation Equations 128

Table of Contents
More Information

14.3 An Ambiguity in $T_{\mu\nu}$ and Ways to Fix It 130
14.4 Interpretation of $T^{\mu\nu}$ 132
14.5 The Belinfante Tensor 132
14.6 Example: The Electromagnetic Field 134
Further Reading 135
Exercises 135

15 Motion of Charged Particles and Electromagnetic Waves; Maxwell Duality 137
15.1 Set of Static Charges 137
15.2 Uniformly Moving Charges 138
15.3 Electrostatics Methods 140
15.4 The Electric and Magnetic Fields Away from a Collection of Particles: Multipole Expansions 141
15.5 Electromagnetic Waves 143
15.6 Arbitrary Moving Charges 145
15.7 Generation of Electromagnetic Waves by Dipoles 147
15.8 Maxwell Duality 148
Further Reading 149
Exercises 149

16 The Hopfion Solution and the Hopf Map 150
16.1 Sourceless Maxwell's Equations and Conserved "Helicities" 150
16.2 Hopf Map and Hopf Index 152
16.3 Bateman's Construction 154
16.4 The Hopfion Solution 154
16.5 More General Solutions and Properties 156
Further Reading 156
Exercises 157

17 Complex Scalar Field and Electric Current: Gauging a Global Symmetry 158
17.1 Complex Scalar Field 158
17.2 Electric Current and Charge 159
17.3 Gauging a Global Symmetry 161
Further Reading 163
Exercises 163

18 The Noether Theorem and Applications 165
18.1 Setup 165
18.2 Noether's Theorem 166
18.3 The Noether Procedure 166
18.4 A Subtlety and a General Form: Extra Terms in the Current 167
18.5 Applications 168
18.6 The Charge as a Function of Fields 170

Further Reading 171
Exercises 171

19 Nonrelativistic and Relativistic Fluid Dynamics: Fluid Vortices and Knots 172
19.1 Ideal Fluid Equations 172
19.2 Viscous Fluid and Navier–Stokes Equation 173
19.3 Relativistic Generalization of Fluid Dynamics 174
19.4 Vorticity and Helicity of Ideal Fluid 176
19.5 Small Fluctuations and Fluid Waves 177
19.6 Fluid Vortices and Knots 178
Further Reading 180
Exercises 180

Part II Solitons and Topology; Non-Abelian Theory 183

20 Kink Solutions in ϕ^4 and Sine-Gordon, Domain Walls and Topology 185
20.1 Setup 185
20.2 Analysis of Classical Solutions 186
20.3 Topology 190
20.4 Domain Walls 191
20.5 Sine-Gordon System 192
Further Reading 194
Exercises 194

21 The Skyrmion Scalar Field Solution and Topology 195
21.1 Defining the Skyrme Model 195
21.2 Analysis of the Model 197
21.3 Topological Numbers 198
21.4 Hedgehog Configuration and Skyrmion Solution 199
21.5 Generalizations of the Skyrme Model 200
Further Reading 202
Exercises 202

22 Field Theory Solitons for Condensed Matter: The XY and Rotor Model, Spins, Superconductivity, and the KT Transition 203
22.1 The XY and Rotor Model 203
22.2 Field Theory and Vortices 204
22.3 Kosterlitz–Thouless Phase Transition 205
22.4 Landau–Ginzburg Model 206
Further Reading 208
Exercises 208

23 Radiation of a Classical Scalar Field: The Heisenberg Model 209
23.1 Scalar Models 209

23.2 Shock Wave Solutions for Relativistic Sources: The Heisenberg Model 211
23.3 Radiation from Scalar Waves 214
Further Reading 216
Exercises 216

24 Derrick's Theorem, Bogomolnyi Bound, the Abelian-Higgs System, and Symmetry Breaking 217
24.1 Derrick's Theorem 217
24.2 Bogomolnyi Bound 218
24.3 Abelian-Higgs System and Symmetry Breaking 220
24.4 Unitary Gauge 222
24.5 Non-Abelian Higgs System 223
Further Reading 225
Exercises 225

25 The Nielsen-Olesen Vortex, Topology and Applications 226
25.1 Setup 226
25.2 Bogomolnyi Bound and BPS Limit 227
25.3 BPS Equations and the Vortex Solution 229
25.4 Applications 233
Further Reading 234
Exercises 235

26 Non-Abelian Gauge Theory and the Yang–Mills Equation 236
26.1 Non-Abelian Gauge Groups 236
26.2 Coupling the Gauge Field to Other Fields 237
26.3 Pure Yang–Mills Theory 239
26.4 The Yang–Mills Equation 241
Further Reading 243
Exercises 243

27 The Dirac Monopole and Dirac Quantization 244
27.1 Dirac Monopole from Maxwell Duality 244
27.2 Gauge Fields on Patches 246
27.3 Topology and Dirac Quantization 249
27.4 Dirac String Singularity and Dirac Quantization from It 251
27.5 Dirac Quantization from Semiclassical Nonrelativistic Considerations 252
Further Reading 254
Exercises 254

28 The 't Hooft–Polyakov Monopole Solution and Topology 256
28.1 Setup for Georgi–Glashow Model 256
28.2 Vacuum Manifold and 't Hooft–Polyakov Solution 258
28.3 Topology of the Monopole 260

More Information

28.4 Bogomolnyi Bound and BPS Monopole 262
28.5 Topology for the BPS and the Dirac Monopole 263
Further Reading 265
Exercises 266

29 The BPST-'t Hooft Instanton Solution and Topology 267
29.1 Setup for Euclidean Yang–Mills and Self-Duality Condition 268
29.2 Chern Forms 270
29.3 The Instanton Solution 272
29.4 Quantum Interpretation of the Instanton 275
Further Reading 276
Exercises 276

30 General Topology and Reduction on an Ansatz 278
30.1 Topological Classification of Scalars and Homotopy Groups 278
30.2 Gauge Field Classifications 280
30.3 Derrick's Argument with Gauge Fields 281
30.4 Reduction on an Ansatz 282
Further Reading 284
Exercises 284

31 Other Soliton Types. Nontopological Solitons: Q-Balls; Unstable Solitons: Sphalerons 285
31.1 Q-Balls 285
31.2 Sphalerons 288
31.3 Sphaleron on a Circle 289
31.4 Other Sphalerons 291
Further Reading 292
Exercises 292

32 Moduli Space; Soliton Scattering in Moduli Space Approximation; Collective Coordinates 294
32.1 Moduli Space and Soliton Scattering in Moduli Space Approximation 294
32.2 Example: ANO Vortices in the Abelian-Higgs Model 296
32.3 Collective Coordinates and Their Quantization 299
32.4 Change of Basis in a Hamiltonian and Quantization 301
32.5 Application to Collective Coordinate Quantization 304
Further Reading 305
Exercises 306

Part III Other Spins or Statistics; General Relativity 307

33 Chern–Simons Terms: Emergent Gauge Fields, the Quantum Hall Effect (Integer and Fractional), Anyonic statistics 309
33.1 Chern–Simons Gauge Field 309

33.2 Topological Response Theory and the Quantum Hall Effect 311
33.3 Emergent (Statistical) Chern–Simons Gauge Field in Solids 312
33.4 Anyons and Fractional Statistics 314
33.5 Anyons and the Fractional Quantum Hall Effect (FQHE) 315
Further Reading 318
Exercises 318

34 Chern–Simons and Self-Duality in Odd Dimensions, Its Duality to Topologically Massive Theory and Dualities in General 319
34.1 Vector Theories in 2+1 Dimensions 319
34.2 Self-Duality in Odd Dimensions 322
34.3 Duality of Self-Dual Action and Topologically Massive Action 324
34.4 Duality in 1+1 Dimensions: "T-Duality" 326
34.5 Comments on Chern–Simons Theories in Higher Dimensions 328
Further Reading 329
Exercises 329

35 Particle–Vortex Duality in Three Dimensions, Particle–String Duality in Four Dimensions, and *p*-Form Fields in Four Dimensions 330
35.1 Maxwell Duality in 3+1 Dimensions 330
35.2 Particle–Vortex Duality in 2+1 Dimensions 331
35.3 Particle–String Duality in 3+1 Dimensions 333
35.4 Poincaré Duality and Applications to 3+1 Dimensions 335
Further Reading 337
Exercises 337

36 Fermions and Dirac Spinors 338
36.1 Spinors, Dirac and Weyl 338
36.2 Gamma Matrices 340
36.3 Majorana Spinors 343
Further Reading 345
Exercises 345

37 The Dirac Equation and Its Solutions 347
37.1 Lorentz Invariant Lagrangeans 347
37.2 The Dirac Equation 349
37.3 Solutions of the Dirac Equation 350
37.4 Normalizations 352
Further Reading 355
Exercises 355

38 General Relativity: Metric and General Coordinate Invariance 356
38.1 Intrinsically Curved Spaces and General Relativity 356
38.2 Einstein's Theory of General Relativity 359
38.3 Kinematics 362

38.4 Motion of Free Particles 363
Further Reading 365
Exercises 365

39 The Einstein Action and the Einstein Equation 367
39.1 Riemann Tensor and Curvature 367
39.2 Turning Special Relativity into General Relativity and Einstein–Hilbert Action 369
39.3 Einstein's Equations 371
39.4 Examples of Energy-Momentum Tensor 373
39.5 Interpretation of the Einstein Equation 375
Further Reading 376
Exercises 376

40 Perturbative Gravity: Fierz-Pauli Action, de Donder Gauge and Other Gauges, Gravitational Waves 378
40.1 Perturbative Gravity and Fierz-Pauli Action 378
40.2 Gauge Invariance, de Donder Gauge and Other Gauges 381
40.3 Gravitational Waves 382
40.4 Exact Cylindrical Gravitational Wave (Einstein–Rosen) 385
Further Reading 387
Exercises 387

41 Nonperturbative Gravity: The Vacuum Schwarzschild Solution 389
41.1 Newtonian Limit 389
41.2 Ansatz and Equations of Motion 390
41.3 Final Solution of Equations of Motion 393
Further Reading 395
Exercises 395

42 Deflection of Light by the Sun and Comparison with General Relativity 396
42.1 Motion of Light As Motion in a Medium with Small, Position-Dependent Index of Refraction 396
42.2 Formal Derivation Using the Hamilton–Jacobi Equation 400
42.3 Comparison with Special Relativity 403
Further Reading 404
Exercises 404

43 Fully Linear Gravity: Parallel Plane (pp) Waves and Gravitational Shock Wave Solutions 405
43.1 PP Waves 405
43.2 The Penrose Limit 407
43.3 Gravitational Shock Waves in Flat Space 410
43.4 Gravitational Shock Waves in Other Backgrounds 413
43.5 The Khan–Penrose Interacting Solution 414

Exercises 416

44 Dimensional Reduction: The Domain Wall, Cosmic String, and BTZ Black Hole Solutions 418
44.1 The Domain Wall: Ansatz 418
44.2 The Domain Wall: Einstein's Equation 418
44.3 The Domain Wall Solutions 420
44.4 Cosmic String: Ansatz 421
44.5 Cosmic String: Einstein's Equations 422
44.6 Cosmic String Solution via Dimensional Reduction 423
44.7 Cosmic String: Alternative Weak Field Derivation 426
44.8 The BTZ Black Hole Solution in 2+1 Dimensions and Anti–de Sitter Space 427
Further Reading 431
Exercises 432

45 Time-Dependent Gravity: The Friedmann-Lemaître-Robertson-Walker (FLRW) Cosmological Solution 433
45.1 Metric Ansatz 433
45.2 Christoffel Symbols and Ricci Tensors 436
45.3 Solution to the Einstein's Equations 438
Further Reading 439
Exercises 440

46 Vielbein-Spin Connection Formulation of General Relativity and Gravitational Instantons 441
46.1 Vielbein-Spin Connection Formulation of General Relativity 441
46.2 Taub-NUT Solutions 445
46.3 Hawking's Taub-NUT Gravitational Instanton 447
46.4 The Eguchi–Hanson Metric and Yang–Mills-Like Ansatz 448
46.5 Instanton Ansätze and Solutions 450
46.6 Gibbons–Hawking Multi-Instanton Solution 452
Further Reading 454
Exercises 454
