List of Tables	xii
List of Figures	xiv
Preface	xix
Glossary of Notation	xxv
I Probability Functions, Probability Density Functions, and Their Cumulative Counterparts	1
1 Discrete Probability and Cumulative Probability Functions	3
1.1 Overview	3
1.2 Parametric Probability Function Estimation	5
1.3 Nonsmooth Probability Function Estimation	8
1.4 Smooth Kernel Probability Function Estimation	11
1.4.1 Estimator Properties for Unordered Categorical Variables and Kernels	12
1.4.2 The SMSE-Optimal Smoothing Parameter and Rate of Convergence	16
1.4.3 Asymptotic Normality	18
1.4.4 Kernel Estimation and Shrinkage	18
1.4.5 Estimator Properties for Ordered Categorical Variables and Kernels	19
1.5 Nonsmooth Cumulative Probability Function Estimation	22
1.6 Smooth Kernel Cumulative Probability Function Estimation	25
1.7 The Multivariate Extension	27
1.8 Practitioner's Corner	29
1.8.1 Estimating Probability Functions in R	29
1.8.2 A Monte Carlo Comparison of Probability Estimators	34
Problem Set	45

2	Continuous Density and Cumulative Distribution Functions	49
2.1	Overview	49
2.2	Parametric Density Function Estimation	50
2.3	Nonsmooth Density Function Estimation	51
2.3.1	The Histogram Density Estimator	51
2.3.2	The Naïve Density Estimator	52
2.4	Smooth Kernel Density Function Estimation	56
2.4.1	Properties of the Rosenblatt-Parzen Kernel Density Estimator	58
2.4.2	The IMSE-Optimal Bandwidth and Rate of Convergence	66
2.4.3	The IMSE-Optimal Kernel Function	67
2.4.4	Asymptotic Normality	69
2.4.5	Bandwidth Selection	71
2.4.6	Bias-Reducing Kernel Functions	75
2.5	Smooth Kernel Cumulative Distribution Function Estimation	77
2.5.1	Properties of the Kernel Cumulative Distribution Function Estimator	77
2.5.2	IMSE-Optimal Bandwidth	80
2.5.3	Asymptotic Normality	81
2.5.4	Bandwidth Selection	81
2.6	Smooth Kernel Quantile Function Estimation	82
2.7	The Multivariate Extension	85
2.7.1	Properties of the Multivariate Kernel Density Estimator	87
2.7.2	Properties of the Multivariate Kernel Cumulative Distribution Function Estimator	88
2.8	Entropy and Information Measures	89
2.8.1	Statistical Mechanics and Information Functions	89
2.8.2	Relative Entropy	91
2.8.3	Joint and Conditional Entropy	93
2.8.4	Mutual Information	93
2.8.5	Entropy and Metricness	94
2.8.6	Entropy and Axiom Systems	94
2.8.7	Entropy, Inference, Robustness, and Consistency	95
2.8.8	Kernel Estimation and Entropy	96
2.9	Practitioner's Corner	97
2.9.1	The Smoothed Bootstrap	103
2.9.2	Testing Univariate Asymmetry	104
2.9.3	Testing Equality of Univariate Densities	106
2.9.4	Testing Nonlinear Pairwise Independence	108
2.9.5	Testing Nonlinear Serial Independence	109

CONTENTS

vii

2.9.6	Bounded Domains and Boundary Corrections	111
2.9.7	Nonlinear Optimization and Multi-Starting	118
2.9.8	Confidence Bands and Nonparametric Estimation	123
Problem Set		129
3	Mixed-Data Probability Density and Cumulative Distribution Functions	131
3.1	Overview	131
3.2	Smooth Mixed-Data Kernel Density and Cumulative Distribution Function Estimation	132
3.2.1	Properties of the Mixed-Data Smooth Kernel Density Estimator	133
3.2.2	Properties of the Mixed-Data Smooth Kernel Cumulative Distribution Estimator	135
3.3	The Multivariate Extension	135
3.4	Smooth Kernel Copula Function Estimation with Mixed-Data	137
3.4.1	Copulae and Dependence	139
3.5	Practitioner's Corner	142
3.5.1	Testing Equality of Mixed-Data Multivariate Densities	142
3.5.2	Generating Copula Function Contours	143
Problem Set		145
4	Conditional Probability Density and Cumulative Distribution Functions	147
4.1	Overview	147
4.2	Smooth Kernel Conditional Density Function Estimation	148
4.2.1	Bandwidth Selection	149
4.2.2	The Presence of Irrelevant Covariates	150
4.3	Smooth Kernel Conditional Cumulative Distribution Function Estimation	152
4.3.1	Bandwidth Selection	153
4.4	Conditional Quantile Function Estimation	154
4.4.1	Parametric Conditional Quantile Function Estimation	154
4.4.2	Smooth Kernel Conditional Quantile Function Estimation	157
4.5	Binary Choice and Multinomial Choice Models	158
4.5.1	Parametric Binary Choice and Multinomial Choice Models	158
4.5.2	Smooth Kernel Binary Choice and Multinomial Choice Models	159
4.6	Practitioner's Corner	162
4.6.1	Generating Counterfactual Predictions	166

4.6.2	Bootstrapping Counterfactual Predictions	166
4.6.3	The Smoothed Bootstrap	170
4.6.4	Assessing Model Performance	172
4.6.5	Average Treatment Effects and Propensity Score Matching	179
	Problem Set	185
	II Conditional Moment Functions and Related Statistical Objects	187
	5 Conditional Moment Functions	189
5.1	Overview	189
	6 Conditional Mean Function Estimation	193
6.1	Overview	193
6.2	Parametric Conditional Mean Models	195
6.2.1	(Re)-interpretation of Conditional Mean Models	197
6.2.2	Counterfactual Experiments and Conditional Mean Models	199
6.3	Local Constant Kernel Regression	206
6.3.1	Estimator Properties	208
6.3.2	The IMSE-Optimal Bandwidth and Kernel Function	218
6.3.3	Asymptotic Normality	219
6.3.4	Outlier-Resistant Local Constant Kernel Regression	219
6.3.5	Bandwidth Selection	220
6.3.6	A Coefficient of Determination for Nonparametric Regression	222
6.3.7	Local Constant Marginal Effects	223
6.4	Local Polynomial Kernel Regression	226
6.5	The Multivariate Local Polynomial Extension	229
6.6	Local Polynomial Kernel Regression and Shrinkage	232
6.7	Multivariate Mixed-Data Marginal Effects	235
6.7.1	A Consistent Test for Predictor Relevance	236
6.8	Time Series Kernel Regression	240
6.9	Shape Constrained Kernel Regression	245
6.10	Practitioner's Corner	248
6.10.1	Kernel Regression Is Weighted Least Squares Estimation	248
6.10.2	Joint Determination of the Polynomial Degree and Bandwidth	249
6.10.3	A Consistent Nonparametric Test for Correct Parametric Specification	253

CONTENTS	ix
6.10.4 Shape Constrained Kernel Regression	257
6.10.5 A Multivariate Application of Local Linear Regression	260
6.10.6 Confidence Bands and Nonparametric Estimation	263
6.10.7 Assessing Model Performance	264
6.10.8 Fixed-Effects Panel Data Models	269
Problem Set	273
7 Conditional Mean Function Estimation with Endogenous Predictors	275
7.1 Overview	275
7.2 Ill-Posed Inverse Problems and Identification	276
7.2.1 Kernel Smoothing and Ill-Posedness	277
7.2.2 Singular Design Matrices and Ill-Posedness	279
7.3 Parametric Instrumental Regression	280
7.4 Nonparametric Instrumental Regression	281
7.5 Practitioner's Corner	285
7.5.1 Estimation of Engel Curves	285
7.5.2 Nonparametric Instrumental Regression with a Linear DGP	285
Problem Set	289
8 Semiparametric Conditional Mean Function Estimation	291
8.1 Overview	291
8.2 Robinson's Partially Linear Model	291
8.3 Varying Coefficient Models	294
8.4 Semiparametric Single Index Models	296
8.4.1 Ichimura's Method (Continuous Y)	297
8.4.2 Klein and Spady's Method (Binary Y)	298
8.5 Summary	300
8.6 Practitioner's Corner	300
8.6.1 A Specification Test for the Partially Linear Model	300
8.6.2 Assessing Model Performance - Continuous Y	301
Problem Set	307
9 Conditional Variance Function Estimation	309
9.1 Overview	309
9.2 Local Linear Conditional Variance Function Estimation	309
9.3 Practitioner's Corner	311
9.3.1 A Simulated Illustration	311
Problem Set	313

III	Appendices	315
A	Large and Small Orders of Magnitude and Probability	317
A.1	Big and Small O Notation	317
A.2	Big and Small O in Probability Notation	319
B	R, RStudio, TeX, and Git	323
B.1	Installation of R and RStudio Desktop	323
B.2	What Is R?	323
B.2.1	R in the News	324
B.2.2	Introduction to R	324
B.2.3	Econometrics in R	324
B.3	What Is RStudio Desktop?	325
B.3.1	Introduction to RStudio	325
B.4	Installation of TeX	325
B.5	Installation of Git	325
C	Computational Considerations	327
C.1	Binning Methods	327
C.2	Transforms	328
C.3	Parallelism	328
C.4	Multipole and Tree-Based Methods	328
C.5	Computationally Efficient Kernel Estimation in R	328
D	R Markdown for Assignments	333
D.1	Source Code (R Markdown) for This Document	333
D.2	R, RStudio, TeX, and Git	333
D.3	What Is R Markdown?	333
D.4	Creating a New R Markdown Document in RStudio	334
D.5	Including R Results in Your R Markdown Document	334
D.6	Reading Data from a URL	334
D.7	Including Plots	335
D.8	Including Bulleted and Numbered Lists	336
D.9	Including Tables	337
D.10	Including Verbatim (i.e., Freeform) Text	337
D.11	Typesetting Mathematics	337
D.12	Flexible Document Creation	338
D.13	Knitting Your R Markdown Document	338
D.14	Printing Your Document	338
D.15	Troubleshooting and Tips	339
E	Practicum	343
E.1	Overview	343
E.2	Getting Started with R	343

CONTENTS

xi

E.2.1	Reading Datasets Created by Other Software Programs	344
E.2.2	Nonparametric Estimation of Density Functions	345
E.3	Introduction to the R Package np: Working with <code>npudens()</code>	346
E.3.1	Introduction to the <code>npksum()</code> Function	348
E.3.2	Applied Nonparametric Density Estimation	349
E.3.3	Introduction to Applied Nonparametric Regression	351
E.3.4	Advanced Use of the <code>npksum()</code> Function	352
E.3.5	Consistent Nonparametric Inference	354
E.3.6	Non-nested Model Comparison	357
E.3.7	Semiparametric Models	359
E.3.8	Nonparametric Discrete Choice Models	360
E.3.9	Shape Constrained Nonparametric Regression	362
	Bibliography	367
	Author Index	391
	Subject Index	397
