<i>Foreword I</i>	<i>xxiii</i>
<i>Foreword II</i>	<i>xxv</i>
<i>Preface</i>	<i>xxvii</i>
<i>Acknowledgments</i>	<i>xxxii</i>
1. Atoms and Molecules as Bound Quantum Systems	1
1.1 Introduction – A Brief History of the Study of Electron Scattering	1
1.2 The Hydrogen Atom and Multi-Electron Atoms	6
1.3 Atomic Properties – Atomic Radii	9
1.4 Molecular Structure and Properties	11
2. Quantum Scattering Theories	14
2.1 Definition of Electron Scattering Cross Sections	14
2.2 Description of Experimental Measurements	16
2.3 High Energy Electron Scattering	25
2.4 Partial Wave Complex Potential Formalism	27
2.5 Scattering from Atomic and Molecular Hydrogen	30
2.6 Conclusions	45
3. Electron Atom Scattering and Ionization	46
3.1 Introduction	46
3.2 Inert Gas Atoms	48
3.3 Oxygen, Nitrogen, and Carbon	58
3.4 Other Atomic Targets	64
3.5 Metastable Atomic Species	73
3.6 General Trends and Correlations in Electron–Atom Scattering	80
4. Electron Molecule Scattering and Ionization – I: Small Molecules and Radicals	83
4.1 The Nitrogen Molecule	84
4.2 Other Diatomic and Well-Known Targets	89

4.3	The Water Molecule, Its Derivatives OH, HO ₂ , H ₂ O ₂ , and the Water Dimer (H ₂ O) ₂	105
4.4	Methane, CH ₄ , and the Radicals CH _x (x = 1, 2, and 3)	114
4.5	Other Common Molecules and Their Radicals	119
4.6	Reactive Species CN, C ₂ N ₂ , HCN, and HNC; BF	123
4.7	Metastable Species of Molecular Hydrogen and Nitrogen	126
4.8	General Trends and Correlations	128
5.	Electron Molecule Scattering and Ionization – II: Other Polyatomic Molecules and Radicals	130
5.1	Small Polyatomic Molecules	131
5.2	Two-center Systems, Small Hydrocarbons, etc.	140
5.3	Larger Tetrahedral and Other Molecules	147
5.4	Heavier Polyatomics	159
5.5	Larger Hydrocarbons and Fluorocarbons	165
5.6	Molecules of Biological Interest	172
5.7	General Trends and Correlations	175
6.	Applications of Electron Scattering	177
6.1	Electron Scattering Processes in Nature and Technology	178
6.2	Electron Scattering in Different Phases of Matter	180
6.3	The Terrestrial Atmosphere	188
6.4	The Role of Electron Collisions in Planetary Atmospheres and Comets	190
6.5	The Role of Electrons in Astrophysics and Astrochemistry	198
6.6	Electrons and Nanotechnology	202
6.7	Scattering under External Plasma Confinements	206
6.8	Biomolecular Targets and Radiation Damage	208
6.9	Positron Atom/Molecule Scattering	212
6.10	Conclusions: the Future of Electron Scattering	217
	Bibliography	219
	Index	249
