

## Index

**Bold type** refers to tables; *italic* to figures

Abbreviations used in subheadings

CHC theory = Cattell–Horn–Carroll theory

GCA = general cognitive ability

- ability 6, 16–18, 33, 54, 60–61, 80, 84–85; *see also* general cognitive ability; primary mental abilities theory; profiles of ability; reasoning ability; verbal ability
- achievement 14–15, 88, 186–187, 202, 208; *see also* educational outcomes; occupational attainment
- accelerated longitudinal research designs 285
- accidents, predictive value of GCA 404–405
- accommodation 33–34
- Accutane (acne medication), prenatal effects 267
- Ackerman, P. L. 88, 129–130, 290, 296, 299, 417, 419, 421, 426–427, 430–432
- acquired knowledge, CHC theory 88–89
- adaptation to the environment  
 cultural perspectives 187–189  
 definitions of intelligence as 185–189, 185  
 early theories 51  
 genetics/genomics 237  
 intellectual disability 330  
 successful intelligence 208
- adaptive behavior 74, 77, 329–330
- adolescence-limited delinquents 398
- Africa/Africans 179–180, 179, 184, 187–188, 187–189, 233–234
- age effects 14, 282–284, 290  
 dementia 270–271
- environmental perspectives 265
- GCA, correlation with job outcomes 395
- individual differences 295–301, 298
- plasticity of intelligence 302
- preserving intellectual functioning in old age 304
- relative roles of genes and environment 264
- training programs targeting cognitive strategies 302–303  
*see also* lifespan perspectives
- aggression, relationship to *g* 430
- agreeableness, relationship to *g* 428, 433  
 and aggression 430  
 compassion and politeness 428–429
- emotional intelligence 429–430
- alcohol  
 lifespan perspectives 300–304  
 prenatal influences 267
- Alien* brain-training game 453–454, 454
- alleles 229–230; *see also* genetics/genomics
- Alzheimer's disease (AD) 270–271, 403; *see also* dementia
- American Association on Intellectual and Developmental Disabilities (AAIDD) 329
- analytical intelligence  
 lifespan perspectives 280–284, 287  
 successful intelligence 208  
 testing 10, 211–213
- Anastasi, A. 294
- anatomical correlates of intelligence 155–157
- animal studies of intelligence  
 distinction from human intelligence 174  
 environmental perspectives 353  
 lesion studies 142–144  
 sex differences 363  
 species-level differences 4, 6
- anthropological perspectives 35–38, 37–46
- anxiety, and neuroticism 427–428
- apophenia 422
- ARCO word problem example 454–455, 455
- Aristotle 5–6, 78–79
- artificial intelligence overview 16
- artistic creativity 423; *see also* creative intelligence
- Asian Americans 367–368
- assessment  
 giftedness 324–325  
 intellectual disability 329–330  
*see also* IQ (intelligence quotient) tests
- assimilation 33–34
- associative learning, factor analysis 78, 78

- attentional processes 122–124, 129  
 CHC theory 90–91  
 relationship to *g* 419–420  
 speed of mental processing 116  
*see also* executive function  
 auditory processing 73, 89  
 autistic savants 334  
 autonomy, human 264–265  
 average evoked response (AER) 141  
 Avon Longitudinal Study of Parents and Children (ALSPAC) 239
- Baltes, P. B. 285–287, 289–291, 302, 426  
 behavior-genetic data 29–30  
 behaviorism 105  
 bell curve (normal distribution), IQ 23, 317  
*The Bell Curve* (Herrnstein and Murray) 357  
 between-groups comparisons 261–262  
 bias  
 ideological 58–59  
 IQ tests 15  
 predictive 355–356  
 racial differences 365  
*see also* underperformance  
 Big Five personality traits  
*see* five-factor model  
 binding theory, working memory capacity 123  
 Binet, Alfred 50–52, 68  
 Binet–Simon Scale 50–52, 56–59  
 biological perspectives 29, 139–140, 162–165  
 advantages/disadvantages 33  
 anatomical correlates 155–157  
 brain scan data 30–31, 31–32  
 brain-damaged patients 32  
 comprehension/reflection questions 165  
 connectivity studies 157–159  
 developmental perspectives 159–160  
 electrophysiological data 32–33, 140–142  
 future developments 161–162  
 genetic/imaging studies 160–161  
 group differences 350–351  
 head/brain size 32  
 lesion studies 142–144  
 molecular-genetic and behavior-genetic data 29–30  
 neurochemistry 153–155  
 neuroimaging studies 144–161, 163–164  
 parieto-frontal integration theory 151–153  
 racial/ethnic differences 366–367  
 sex differences 361–363  
 biopsychosocial hypothesis 353–354, 354  
 bipolar disorder 428  
 biracial children 366–367  
 black–white test score gap 364–367, 370–371; *see also* racial differences  
 blank slate approach 364  
 bodily–kinesthetic intelligence 203  
 BOLD (blood oxygen level-dependent) signal 158; *see also* functional magnetic resonance imaging  
 Bouchard, T. J. 84, 139, 156, 416–417  
 brain 8–9, 12, 29; *see also* biological perspectives  
 brain chemistry 153–155  
 brain connectivity 32, 157–159  
 sex differences 362  
 brain-damaged patients 12, 32  
 anatomical correlates of intelligence 155–156  
 IQ tests 73  
 multiple intelligences theory 204–206  
*Rain Man* (film) 334  
 stroke 12, 73 *see also* lesion studies  
 brain efficiency hypothesis 145–146, 150–151  
 brain scan data *see* neuroimaging studies  
 brain size  
 biological perspectives 32  
 neuroimaging studies 148–150, 161  
 sex differences 361–362  
 brain training *see* cognitive training  
 Brazilian street children 185, 185–186  
 breastfeeding 269  
 broad abilities 82  
*Buros' Mental Measurements Yearbook* 9  
 Burt, Sir Cyril 58
- camels and German cities  
 example of reasoning 256  
 Cantor, N. 6  
 cardiopulmonary health, predictive value of GCA 401  
 Carroll, John 7, 9, 84–85; *see also* Cattell–Horn–Carroll (CHC) theory  
 Cattell, James McKeen 49–50  
 Cattell, Raymond 82–84; *see also* Horn–Cattell model  
 Cattell–Horn–Carroll (CHC) theory 85–91, 280–284, 281  
 Ceci, S. J. 11, 185, 190, 220, 272, 358  
 ceiling effect 320  
 central tendency measures, processing speed 115  
 change-detection tasks 118–119  
 CHC theory *see* Cattell–Horn–Carroll theory  
 children and infants  
 exposure to toxins 269–270  
 nutrition 269  
 relative roles of genes and environment 262–263  
 postnatal effects on intelligence 268–270  
 China/Chinese 178  
 Chinese Americans 367–368  
 chromosomes 227  
 chronic illness, age effects 301  
 chronological age 22–26, 23, 68–69  
 citizenship 322

- clustered regularly interspaced short palindromic repeats-associated protein *see* CRISPR-Cas9 system
- cognitive ability *see* general cognitive ability
- cognitive components 27; *see also* mental processes
- cognitive consequences  
 research 449–450, 450
- cognitive correlates method 27, 109–111
- cognitive exploration 418
- cognitive mechanics 289–290
- cognitive perspectives 9, 26–27, 104, 107–108, 130–132  
 advantages/disadvantages 28–29
- componential analysis  
 method 111–112
- comprehension/reflection questions 132
- definitions 108–109
- experimental and differential traditions 106
- generative learning strategies 445
- history 104–105
- IQ tests 70–73
- processing speed 112–117
- psychological vs. psychometric *g* 106–107
- sex differences 357–360, 359
- theoretical challenges 129–130
- test-operate-test-exit sequences 27, 28
- types 27–28
- working memory capacity 117–130
- cognitive pragmatics 289–290
- cognitive processing skills 443–444, 448–449, 452–454, 454, 463; *see also* cognitive training; computer games
- cognitive psychology 104
- cognitive reserve 270
- cognitive resource theory 297–299
- cognitive strengths/weaknesses measurements 70–73; *see also* mental processes
- cognitive training (brain training)  
 cognitive processing skills 302–303, 452–454  
 intellectual disability 335–339  
 lifespan perspectives 302  
 relationship between intelligence and cognition 27  
*see also* exercising the brain
- coherence principle 461
- college admissions *see* graduate admissions testing
- compassion, relationship to *g* 428–429, 434–435
- compensation, theory of 431
- compensatory model, identification of giftedness 324–325
- complex span tasks 118, 118
- componential analysis method, 208–210, 210  
 analytical skills 211–213  
 cognitive perspectives 111–112  
 creative intelligence 213–214, 213–214  
 practical intelligence 215–216, 215–217  
*see also* successful intelligence
- components of intelligence, structural models 77
- composition of intelligence, structural models 77
- computer games 449–452, 450; *see also* Tetris
- concrete method 457, 458–459
- conjunctive model, identification of giftedness 324–325
- connectivity studies *see* brain connectivity
- consanguineous marriages 238
- conscientiousness 430–431  
 future discounting 431–432  
 giftedness 327  
 and intelligence 433  
 theory of compensation 431
- context 210, 280; *see also* cultural perspectives; environmental perspectives; successful intelligence
- contextually important skills 187–188, 187–189
- continuum of intelligence 186–187
- control, early theories 51–52
- converging operations 176, 207
- Conway, A. R. A. 106–107, 110, 115, 122, 125, 131, 176, 420
- core operations 204–206
- corpus callosum 362; *see also* brain connectivity
- corrective feedback 457
- correlation, GCA with life outcomes 381–382, 383–385
- correlational (differential) research 106
- cortisol 301
- counterproductive work behavior 394, 399–400
- court cases 74
- creative intelligence 213–214, 213–214, 221
- creativity  
 and giftedness 327  
 predictive value of GCA 391–392  
 relationship to intelligence 15–16, 422–425  
 testing 10, 241–242
- criminal conviction, predictive value of GCA 398–399
- CRISPR-Cas9 system (clustered regularly interspaced short palindromic repeats-associated protein) 244–247
- criterion-related validity, predictive value of GCA 384
- cross-sectional studies, developmental research 284–285  
 crystallized and fluid intelligence 287–289  
 methodological challenges 285–287, 289
- crystallized intelligence  
 age effects 14  
 cultural perspectives 187–189  
 genetics/genomics 236

 Wechsler Adult Intelligence Scale (WAIS) 9, 54–55  
 Wechsler Intelligence Scale for Children (WISC) 54–55  
 weight discrimination test 48–49  
 well-being, predictive value of GCA 403  
 Western conceptions of intelligence 176–179, 181; *see also* cultural perspectives; developed countries  
 white matter, neuroimaging 148–149, 156–169  
 whole-genome sequencing (WGS) 233  
 wisdom 4, 38, 179, 322, 425–426; *see also* judgment  
 Wissler, Clark 105  
 wit, constructs of intelligence 5–6  
 within-groups comparisons 261–262  
 Woodcock, R. W. 69, 86, 93  
 Woodcock–Johnson–Revised (WJ-R) test 288, 297  
 word problems, knowledge needed to solve 454–455, 455  
 work capacity, early theories 47–48  
 working memory capacity (WMC) 27, 110  
 CHC theory 90–91  
 cognitive mechanics and cognitive pragmatics 289–290  
 cognitive resource theory 297–299  
 cognitive training 338–339  
 measures 71, 117–122, 118  
 personality traits 419–420  
 and reading comprehension 127–129  
 relationship to intelligence 124–127, 419–420  
 theoretical challenges 120–122  
 theories 122–124 *see also* executive function  
 workplace outcomes, use of GCA to predict 393, 393  
 catch-up fallacy 396  
 comprehension/reflection questions 407  
 job complexity 394–395  
 occupational attainment 397  
 personnel selection, IQ tests 74–76  
 predictive validation studies 394  
 as predictor of task performance 394  
 rate and amount of learning correlations 396  
 salaries/salary trajectories 396–397  
 skills taught after hiring 393  
 threshold levels fallacy 395  
 workplace safety, predictive value of GCA 404–405  
 World War I, military IQ testing 59  
 worst performance rule 116  
 Yup'ik Eskimo study 188–189  
 Zambia, genome-wide association studies 233–234  
 Zika virus, prenatal influences 268  
 zone of proximal development (ZPD) 34–35, 189
