<i>Acknowledgments</i>	<i>xxiv</i>
Introduction: Getting and Evaluating Information for Making Decisions about Conservation	1
Sources of Information about the Natural World	1
Evaluating Information about the Natural World	10
<b>Part I Maintaining Populations of Featured Species: A Utilitarian Approach to Conservation</b>	
1 Historical Context: Beginnings of Formal Utilitarian Conservation	15
1.1 Royal Reserves and Sacred Groves	15
1.2 Colonial Expansion	18
1.3 Changes from 1800 to 1950	22
1.4 Diagnosing the Problem	32
1.5 Response	33
2 Central Concepts: Populations, Succession, and Ecosystems	38
2.1 Populations	38
2.2 Succession	55
2.3 Ecosystems	59
2.4 Implications: Equilibrium and Stability	63
3 Strategies: Managing Harvests and Habitats for Valued Species	64
3.1 Classifying Species and Habitats on the Basis of Utilitarian Values	64
3.2 Managing Harvest	64
3.3 Managing Habitats	80
3.4 Conserving Soil	86
	vii

3.5	Managing Habitats for Multiple Uses	87
3.6	Evaluating Harvest and Habitat Management	87
4	Strategies: Managing to Minimize Conflicts between Pests and People	88
4.1	What Is a Pest?	88
4.2	Types of Control	89
4.3	Historical Background	92
4.4	Integrated Pest Management	97
4.5	Pests That Compete with People or Valued Species	99
4.6	Pests That Transmit Diseases to People or Domestic Animals	102
4.7	Pests with Recreational Value	105
4.8	Pests That Are Both Rare and Dangerous	107
4.9	Values and Tradeoffs	110
4.10	Evaluating Pest Management	112
 <b>Part II Protecting and Restoring Populations and Habitats: A Preservationist Approach to Conservation</b>		
5	Historical Context: Rising Concerns about Human Impacts	117
5.1	Economic, Demographic, and Technological Changes after World War II	117
5.2	Awareness of Environmental Impacts	118
5.3	Diagnosing the Problem	135
5.4	Response: Protection of Species and Habitats	140
6	Central Concepts: Evolution, Adaptation, and Extinction	141
6.1	Natural Selection	141
6.2	Speciation: The Formation of Species	146
6.3	Classifying Species	148
6.4	Extinction: The Disappearance of Species	155
6.5	Contemporary Extinctions	159
6.6	Implications: Connections between Evolution and Conservation	171
7	Strategies: Protecting and Restoring Species	173
7.1	Overview of Options: Strategies for Preventing Extinctions	173
7.2	Keeping Track of Species in Trouble	173
7.3	Addressing Immediate Causes of Rarity	176
7.4	Managing Intrinsic Limits on Population Growth	182

	<i>Contents</i>	ix
	7.5 Enhancing or Restoring Population Size and Geographic Range: Reintroduction	187
	7.6 Managing Genetic Diversity in Reintroduced Populations	190
	7.7 Setting Priorities: Which Species Should We Try to Save?	193
	7.8 Evaluating Efforts to Protect and Restore Species	194
8	Strategies: Protecting and Restoring Ecosystems	196
	8.1 What Is a Reserve?	196
	8.2 Historical Background	197
	8.3 Designing Reserves	200
	8.4 Setting Priorities: Which Ecosystems Should We Save?	206
	8.5 Managing Reserves	212
	8.6 Restoring Ecosystems	214
	8.7 Rewilding: A Landscape Approach to Restoring Large Animal Populations	216
	8.8 Evaluating Ecosystem Conservation	218
 <b>Part III Promoting Biocultural Diversity and Resilience: A Stewardship Approach to Conservation</b>		
9	Historical Context: New Opportunities and Challenges	223
	9.1 Practical Considerations: What Is Feasible?	224
	9.2 Scientific Considerations: Science for a Complex and Rapidly Changing World	224
	9.3 Socioeconomic and Political Considerations: Contrasting Interests and Perspectives	226
	9.4 Ethical Considerations	234
	9.5 Philosophical Considerations: People and Nature	238
	9.6 Legal Considerations: Indigenous Rights	241
	9.7 Diagnosing the Problem	244
	9.8 Response: Stewardship Conservation	244
10	Central Concepts: Complexity and Change	246
	10.1 Revisiting Equilibrium Theories	247
	10.2 Before the Wilderness: Anthropogenic Landscapes	260
	10.3 Climate Change	262
	10.4 An Alternative Perspective: Nature in Flux	270
	10.5 Implications: Stewardship	271

x	<i>Contents</i>	
11	Strategies: Stewardship to Conserve Complex, Resilient Ecosystems	273
11.1	Responses to Disturbances	273
11.2	Restoring Natural Disturbance Agents: Fire and Water	282
11.3	Restoring Interactions	285
11.4	Managing Ecosystem Structures	287
11.5	Managing Ecosystems for Carbon Storage	292
11.6	Evaluating Management for Complex, Resilient Ecosystems	295
12	Strategies: Stewardship to Integrate Conservation of Biological and Cultural Diversity	297
12.1	Introduction	297
12.2	Extractive Reserves	298
12.3	Economic Incentives for Conservation	303
12.4	Conserving Biocultural Diversity	311
12.5	The Kuna-Yala’s PEMASKY: An Uneasy Alliance	314
12.6	Co-management following Indigenous Challenges to Regulatory Agencies	316
12.7	Local Management of a Small-Scale Fishery in Costa Rica	319
12.8	Evaluating Conservation of Biocultural Diversity	322
	<i>Postscript</i>	324
	<i>Appendix: Types of Ecosystems</i>	325
	<i>Bibliography</i>	337
	<i>Index</i>	362
