LIST OF FIGURES ix

1 INTRODUCTION 1

Definition of diapause and quiescence. The diapause stages. Stages of arrest in embryonic diapause.

2 THE ENVIRONMENT AND THE ONSET OF DIAPAUSE 12

The influence of photoperiod on the onset of diapause. The response to constant and changing photoperiods. The sensitivity to illumination; spectral sensitivity. The site of photoreception. The mode of action of the cycle of illumination. Temperature and the onset of diapause. Stages of development sensitive to photoperiod and temperature. The effect of diet on the onset of diapause. The influence of age and other maternal characters.

3 THE INHERITANCE OF DIAPAUSE 40

The effect of the environment on insects with obligatory diapause. The genetics of diapause in *Bombyx mori*. Diapause as a racial character in other insects. Selection for an environmental response.

4 THE ENVIRONMENT AND THE TERMINATION OF DIAPAUSE 50

The temperature requirements for diapause development: the range and optimum. The duration of diapause. The period of sensitivity to low temperature. Evidence for multiple thermal reactions. Photoperiod and other factors. The termination of diapause by chemical and other means.

Contents

5 THE ROLE OF WATER IN THE ARREST OF GROWTH *page* 68

Water and the control of embryonic growth in the Orthoptera. The prolongation of dormancy by water lack in larval and adult insects. The arrest of growth by partial dehydration. The arrest of growth by total dehydration.

6 DIAPAUSE AND QUIESCENCE IN PARASITIC INSECTS 80

The influence of the host on the growth of the parasite. Mechanism of the response to the host. Independent response of parasite and host to the environment. The influence of the parasite on the diapausing host.

7 METABOLIC ADJUSTMENT IN THE DORMANT INSECT 88

The accumulation of reserves during the prediapause period. The level of activity in the dormant insect. The rate of respiration. The utilization of the reserves during diapause. Mechanisms of cellular respiration in relation to growth and diapause. The control of metabolism.

8 THE HUMORAL CONTROL OF DIAPAUSE 101

The humoral regulation of diapause in *Bombyx*. The mechanism of diapause in the egg. The humoral control of diapause in larvae and pupae. The endocrine centres responsive to chilling. The humoral control of imaginal diapause. The environment and the programme of endocrine activity. Theories of diapause.

9 DIAPAUSE AND PHENOLOGY 120

The regulation of the life cycle. Phenological adjustment in geographical races. Synchronization of the growth cycles of insects and plants. Conclusion.
