

ECONOMETRIC THEORY

Notes for Contributors

Contributions. Contributions are welcomed from all countries. They should be written in English.

Manuscripts. Four copies of manuscripts should be submitted to:

Peter C.B. Phillips
Editor, *Econometric Theory*
Cowles Foundation for Research
in Economics
Yale University
P.O. Box 208281
New Haven, CT 06520-8281, USA
E-mail: econometric.theory@yale.edu

Electronic submissions may be made directly to the above e-mail address. These should be in PDF format with all fonts (and graphics) embedded and should be accompanied by a letter of submission.

Manuscripts are accepted for review on the understanding that the same work has not been and will not be published nor is presently submitted elsewhere. While under editorial review, it is the responsibility of the authors to keep the Editor informed about submissions, publication plans, and actual publication of related research or abstracts thereof in other outlets, including letters, journals, review publications, journals in other disciplines, conference proceedings, and published dissertations. It is further understood that all persons listed as authors have given their approval for the submission of the paper and that any person cited as a source of personal communication has approved such citation; written authorization may be required at the Editor's discretion. Authors are responsible for obtaining written permission to publish material for which they do not own the copyright. Articles and other material published in *Econometric Theory* represent the opinions of the authors and should not be construed to reflect the opinions of the Editor, Advisory Board, Editorial Board, or the Publisher.

Notes and Problems (NP). Each paper in the NP series is a self-contained complete publication of a worked exercise or a research-level problem. Readers are invited to contribute different solutions for the problem, to be published one year later, again as a self-contained note. Proposed additional solutions will be selected on the basis of the correctness, conciseness, generality, elegance, and diversity of methods employed. Notes outlining interesting unsolved problems are welcome. All NP papers are refereed.

Submissions are only electronic; please submit papers intended for the NP Series to ET's NP Co-editor, Paolo Paruolo, at:

et@eco.uninsubria.it

NP papers should have a clear title, the author(s) name and affiliation(s), an abstract, and unnumbered sections that follow the suggested format: "Motivation and Results," "Proofs and Discussion," and "References." Additional material may be placed in a technical appendix. Following the publication of an NP paper, comments and alternative solutions may be submitted and should be self-contained (only a brief outline of the problem is necessary). Submission of all papers intended for the NP series should include both a PDF file and all the source files derived from any TeX program (LaTeX, Scientific Word,

Plain TeX, AMS TeX), including graphics files.

Preparation of Manuscript. The entire manuscript (including notes and references) should be typed double-spaced on $8\frac{1}{2} \times 11$ -inch or A4 white paper, with wide margins to accommodate copyediting. Manuscript pages should be numbered consecutively. *Page 1* should provide the article title, author's(s') names (in the form preferred for publication), complete affiliations, and e-mail addresses. At the bottom of *Page 1* place any footnotes to the title or authors, indicated by superscripts *, **, etc. *Page 2* should contain a proposed running head (abbreviated form of the title) of 40 characters or less, and the name and mailing address of the author to whom proofs should be sent. *Page 2* should also contain a short abstract of the paper in less than 150 words. The Abstract will appear at the head of the article when published in the Journal.

Equations. All equations should be typewritten and the numbers for displayed equations should be in parentheses in the right margin. References to equations should simply use the form "(3)." Superscripts and subscripts should be typed clearly above and below the line, respectively. Theorem, lemma, and proposition statements should appear in italic print. End-of-proof signposts should appear as ■. Authors are encouraged to use the following order for enclosures, {{(. .)}}.

Tables and Figures. Tables and figures should be numbered consecutively in the order in which they are mentioned in the text. They should be provided as a separate set of pages following all other pages. Every table or figure should have a title or caption and at least one reference in the text to indicate its appropriate location. Figures must be submitted ready for reproduction. Authors are encouraged to submit figures in electronic form, preferably TIFF (line drawings at least 600 dpi, grey scale at least 300 dpi) or EPS (with fonts embedded) format. If not submitted electronically, figures may be output on a laser printer. Figures should remain legible at a 50% reduction, and letters within a word should not touch one another. Figure labels should correspond to text notation as to italic or roman typeface, and superscripts and subscripts should be in superior and inferior positions.

References. References should be cited in the text by the author's last name and the date. Complete bibliographic information for each citation should be included in the list of references. References should be typed in alphabetical order in the style of the following examples:

- Bergstrom, A.R. (1976) *Statistical Inference in Continuous Time Economic Models*. North Holland.
- Giraitis, L. & D. Surgailis (1986) Multivariate Appell polynomials and the central limit theorem. In E. Eberlein & M.S. Taqqu (eds.), *Dependence in Probability and Statistics: A Survey of Recent Results*, pp. 21–72. Birkhauser.
- Gregory, A.W. & G.W. Smith (1995) Business cycle theory and econometrics. *Economic Journal* 105, 1597–1608.

Woodridge, J.M. (in press) On the limits of GLM for specification testing: A comment on Gormu and Trivedi. *Econometric Theory*.

Journal names should *not* be abbreviated.

Footnotes. When more than a simple source citation is called for, footnotes may be used. These should be numbered consecutively throughout the text and typed together at the end of the page before the references. Source citations within footnotes follow the same style as citations in the text.

Copyediting and Proofreading. The publisher reserves the right to copyedit and proofread all articles accepted for publication, but authors will be asked to review their manuscripts if changes have been substantial. Page proofs of articles will be sent to authors for corrections of typographical errors only.

Offprints. Authors receive 25 offprints of their article free of charge; additional numbers may be purchased if ordered at proof stage (an order form will be sent with proofs). Contributors will be asked to assign their copyrights, on certain conditions, to Cambridge University Press.

EDITORIAL POLICY. Since its inception *Econometric Theory* has aimed to endow econometrics with an innovative and authoritative journal dedicated to advance theoretical research in econometrics. It provides a centralized professional outlet for original theoretical contributions in all of the major areas of econometrics and seeks to foster the multidisciplinary features of econometrics that extend beyond the subject of economics. Among the many aspects of econometrics to come within the scope of *ET* are the statistical theory of estimation, testing, prediction and decision procedures in traditionally active areas of research such as linear and nonlinear modeling, simultaneous equations theory, time series, studies of robustness, nonparametric methods, inference under misspecification, finite sample econometrics, limited dependent variable models, the treatment of panel data, and models of discrete choice. *ET* will provide a receptive arena for theoretical studies that open up new fields of research in econometrics and whose application potential is on a longer term horizon. Particularly welcome are papers that promote original econometric research in relation to modern developments in mathematical statistics and probability theory. Contributions that exposit methodological and technical advances in these fields and that illustrate their potential in econometric research are actively encouraged. Articles that unify earlier econometric work either in productive ways or by the use of more elegant methods also lie within the scope of the Journal.

As well as articles that embody original theoretical research, *ET* publishes historical studies on the evolution of econometric thought and interviews with the subject's leading scholars. *ET* also serves an educational role by the inclusion of a "Problems and Solutions Series" and by the publication of pedagogical papers that deal explicitly with educational issues.
