

Journal of Diagnostic Radiography and Imaging

Instructions to Authors

Original articles, editorial correspondence, case reports, notices, suggestions for review articles, product reviews and so forth should be sent to:

Journal of Diagnostic Radiography and Imaging, STM Journals, Cambridge University Press, Edinburgh Building, Shaftesbury Road, Cambridge, CB2 2RU

Tel: +44 (0)1223 312 393; Fax: +44 (0)1223 325 802
Email: jdr@cambridge.org

Authors are requested to submit three copies of their typescript and two copies of any illustrations (we encourage authors to include an electronic copy of the manuscript and images with their submission).

Rejected papers will not be returned to authors except on request. The Editor cannot accept responsibility for damage to or loss of material or disks.

A paper is accepted for publication on the understanding that it has not been submitted simultaneously to another journal in the English language.

Papers that contain the results of human and/or animal studies will only be accepted for publication if it is made clear that a high standard of ethics was applied in carrying out the investigations. In the cases of invasive studies of humans, papers should include a statement that the research protocol was approved by a local ethics committee.

The Editor reserves the right to make editorial and literary corrections. Any opinions expressed or policies advocated do not necessarily reflect the opinions or policies of the Editor.

COPYRIGHT

In order for us to ensure maximum dissemination and copyright protection of material published in the journal, copyright must be explicitly transferred from author to the publisher.

The copyright transfer agreement to be used for the journal is reproduced in the first issue of each year. A copy of this agreement must be signed by the principal author before any paper can be published.

We assure you that no limitation will be put on your personal freedom to use material contained in the paper without requesting permission, providing acknowledgement is made to the journal as the original source of publication.

PRESENTATION OF TYPESCRIPTS

These instructions are in accordance with the International Committee of Medical Journal Editors. *Uniform requirements for manuscripts submitted to biomedical journals*. BMJ 1991; 302 (6772).

Disk submission. We encourage submission of the final version of your article in disk. We prefer 3.5" disks prepared on IBM or Apple Macintosh compatible hardware and software (ideally Word 6.0 for PC). We require an identical disk and 3 hard copies (along with tables and illustrations) of the final version. They must be exact copies, as the manuscript may be used to set your paper if setting from the disk proves impracticable.

Please ensure that all sections of your article are in single file in the order set out below and with references in the correct style. Figures and tables will be handled separately and should not be supplied on disk. Tables, with their captions, and figure legends should be supplied on disk on a separate file.

Instructions for typing. Please read these carefully and give a copy to your typist if you are not preparing the disk yourself

- Allow at least 3 cm margin all around on good, white A4 paper.
- Set your line spacing to double space and type on one side of the paper only.
- Do not justify your text - allow it to run ragged on the right-hand margin. Many word processing packages have the justification mode automatically turned on and this must be turned off.
- Turn off the automatic hyphenation option. Only use hyphens when they are part of a word.
- Never use the letter 'I' for the number 1. Never use the letter 'O' for the number 0.
- Never use the carriage return (enter) at the end of lines within a paragraph. Use the carriage return only at the end of paragraphs or after a first heading.
- Use normal type headings. Capitalise the first letter of the word only. Headings should be ranged to the left hand margin and not centred. Code your heading on the printout only by labelling them (1) for a major heading or (2) for a minor heading.
- Do not underline headings. Do not type them in bold or italic, or type a colon or full stop after them.
- If your PC has italics, use sparingly. You may underline words if you want to indicate italics and this is not available on your word processor.
- Always insert a space between a number and unit, e.g. 5 mm. Do not indent lists. However, if preparing a list within a list, use a tab, not a space to indent the subsets. Bullets, numbers, alphabet characters or dashes may be used but please use rationally and consistently.
- Retain a copy of the disk and printout you sent.
- Remove any backup files from the disk before submission.
- Clearly label the disk with your name, the title of the paper, and the details of the hardware and software used.
- Ensure the disk is protected to avoid damage or X-ray inspection.
- Your printout must be identical to your disk as the printout may be used if setting from the disk proves impracticable.

FULL PAPERS

Papers should be set out as follows, with each section beginning on a separate sheet; title page, summary, text, acknowledgements, references, tables, captions to illustrations.

Title page. The title page should give the following information: 1) title of the article; 2) initial and name of each author, with the highest academic degree(s); 3) name and address of the department or institution to which the work should be attributed; 4) names, address, telephone and tax number of the author responsible for correspondence and to whom request for reprints should be sent and 5) sources of support in the form of grants.

Summary. This should consist of not more than 200 words summarizing the contents of the article.

Text. Headings should be appropriate to the nature of the paper. In general those for experimental papers should follow the usual conventions. Other papers can be subdivided as the author desires; the use of headings enhances readability. Do not use 'he', 'his', etc. where the sex of the person is unknown; say 'the patient' etc. Avoid inelegant alternatives as 'he/she'. Patients should not automatically be designated as 'she' and the doctor as 'he'.

References. The accuracy of references is the responsibility of the author. References should be entered consecutively by Arabic numbers in parentheses in the text. The reference list should be listed in numerical order on a separate sheet in double or triple spacing. References to journals should include the author's name and initials (list all authors when six or fewer; when seven or more, list only the first three and add *et al.*), full title of the paper, journal's title abbreviated, using Index Medicus abbreviations, year of publication, volume number, first and last page numbers.

For example: Albert M J, Faruque S M, Ansaruzzaman M *et al.* Sharing of virulence-associated properties at the phenotypic and generic levels between enteropathogenic *Escherichia coli* and *Hafnia alvei*. J Med Microbiol 1992; **37**: 310-314.

References to books should be set out as follows: Facklan P, R, Carey P, B. Streptococci and areococci. In: Lennetti E H (*ed*) Manual of Clinical Microbiology, 4th edn. Washington, D.C. American Society for Microbiology 1985: 156-157.

Tables. Tables on disk should be presented in a separate file. use only one tab (not spaces) to separate each column in a table. Do not worry about the alignment of columns on the screen, but if you wish to lay the table out on the hard copy, set each tab as appropriate.

Each table should be presented on a separate page and should contain only horizontal rules. Do not submit tables as photographs.

Care should be taken to ensure that all units are included. A short descriptive title should appear above each table and any footnotes, suitably identified, should appear below. Ensure that each table is cited in the text.

CASE REPORTS

Case Reports which add important new information will be considered for publication. Articles published in this section should have no more than three authors, 1000 words, a summary (of about 60 words), 3–6 key words, two figures or tables, and 10 references.

LETTERS TO THE EDITORS

Readers are encouraged to write about any topic that relates to the journal. Such letters will be published in a distinct section. They should be no longer than 500 words.

REVIEWS & ILLUSTRATIVE GUIDES

Reviews of recent developments are welcome. Authors are encouraged to contact the editors to determine the appropriateness for inclusion.

ILLUSTRATIONS

Please note that it is the responsibility of the authors to produce and supply artwork at their own cost. Illustrations will be handled conventionally and should be supplied on disk.

Line illustrations. All line illustrations should present a crisp black image on an even white background (127 x 173 mm (5 x 7 in), or no larger than 203 x 254 mm (8 x 10 in)). Figures should be submitted appropriately lettered in capitals. The size of letter should be appropriate to that of the illustration, taking into account the necessary reduction.

Photographic illustrations and radiographs. These should be submitted as clear, highly contrasted black and white prints (unmounted), sizes as above. Photographs should have the magnification **and** details of staining techniques shown.

X-ray film should be submitted as photographic prints, carefully made to bring out the details to be illustrated, with an overlay indicating the area of importance.

All illustrations should be clearly marked (by label pasted on the back or by a soft crayon) with the figure **number** and author's name and the top of the figure should be illustrated with an arrow. Never use ink of any kind. Never use paperclips as these can scratch or mark the illustrations. Illustrations in colour can be accepted with the agreement of the Editors-in-Chief and Publisher. Captions should be typed, double space, on a separate sheet from the main text.

Patient confidentiality. Where illustrations must include recognizable individuals, living or dead and of whatever age, great care must be taken to ensure that consent for publication has been given.

If identifiable features are not essential to the illustration, please indicate where the illustration can be cropped.

In cases where consent has not been obtained and recognizable features may appear, it will be necessary to retouch the features to mask the eyes or otherwise render the individual 'officially recognizable'.

Permission to reproduce borrowed illustrations or tables or identifiable *photographs*. Written permission to reproduce borrowed material (illustrations and tables) must be obtained from the original publisher and authors, and submitted with the typescript.

Borrowed material should be acknowledged in the captions in this style: 'Reproduced by kind permission of ... (publisher) from ... (reference)'.

PAGE PROOFS

Page proofs are sent to the author for checking. The proofs, with any minor corrections, must be returned by fax or post to the Production Editor at GMM within 48 hours of receipt. All typescripts undergo sonic editorial modifications, so it is important to read your proofs carefully.

PROPRIETARY NAMES

Proprietary names of drugs, instruments etc. should be indicated by the use of initial capital letters.

ABBREVIATIONS AND UNITS

Avoid abbreviations in the title and abstracts. All unusual abbreviations should be fully explained at their first occurrence in the text.

All measurements should be expressed in metric units. For more detailed recommendations, authors may consult the Royal Society of Medicine publication entitled *Units, Symbols and Abbreviations: A Guide for Biological and Medical Editors and Authors* or USA equivalent.

OFFPRINTS

Authors may purchase offprints if required. An offprint order form will be sent to the author with the page proofs.
