

Journal of Radiotherapy in Practice

INSTRUCTIONS TO AUTHORS

Submission to the Journal is exclusively via Editorial Manager:

<http://www.edmgr.com/jrp/>

A paper is accepted for publication on the understanding that it has not been submitted simultaneously to another journal.

Papers that contain the results of human and/or animal studies will only be accepted for publication if it is made clear that a high standard of ethics was applied in carrying out the investigations. In the case of invasive studies of humans, papers should include a statement that the research protocol was approved by a local ethics committee.

The Editor reserves the right to make editorial and literary corrections. Any opinions expressed or policies advocated do not necessarily reflect the opinions or policies of the Editor.

COPYRIGHT

In order for us to ensure maximum dissemination and copyright protection of material published in the Journal, copyright must be explicitly transferred from author to the publisher.

The copyright transfer agreement to be used for the Journal will be sent to the corresponding author at proof stage. A copy of this agreement must be signed by the corresponding author before any paper can be published.

We assure you that no limitation will be put on your personal freedom to use material contained in the paper without requesting permission, providing acknowledgement is made to the Journal as the original source of publication.

PRESENTATION OF TYPESCRIPTS

Please follow instructions found at Editorial Manager submission site.

- Turn off the automatic hyphenation option. Only use hyphens when they are part of a word.
- Never use the letter 'I' for the number 1. Never use the letter 'O' for the number 0.
- Always insert a space between a number and unit, e.g. 5 mm.
- Do not indent lists. However, if preparing a list within a list, use a tab, not a space to indent the subsets. Bullets, numbers, alphabet characters or dashes may be used but please use rationally and consistently.

FULL PAPERS

Papers should be set out as follows, with each section beginning on a separate page; title page, summary, text, acknowledgements, references, tables, captions to illustrations.

Title page. The title page should give the following information: 1) title of the article; 2) initial and name of each author, with the highest academic degree(s); 3) name and address of the department or institution to which the work should be attributed; 4) names, address, telephone and fax number of the author responsible for correspondence and to whom request for reprints should be sent and 5) sources of support in the form of grants.

Abstract. This should consist of not more than 200 words summarizing the contents of the article.

Text. Headings should be appropriate to the nature of the paper. In general those for experimental papers should follow the usual conventions. Other papers can be subdivided as the author desires; the use of headings enhances readability. Do not use 'he', 'his', etc. where the sex of the person is unknown; say, 'the patient' etc. Avoid inelegant alternatives as 'he/she'. Patients should not automatically be designated as 'she' and the doctor as 'he'.

References. The accuracy of references is the responsibility of the author. References should be entered consecutively by Arabic numbers in parentheses in the text. The reference list should be listed in numerical order on a separate sheet in double or triple spacing. References to journals should include the author's name and initials (list all authors when six or fewer; when seven or more, list only the first three and add et al.), full title of the paper, journal's title abbreviated, using Index Medicus abbreviations, year of publication, volume number, first and last page numbers.

For example: Albert M J, Faruque S M, Ansaruzzaman M et al. Sharing of virulence-associated properties at the phenotypic and generic levels between enteropathogenic *Escherichia coli* and *Hafnia alvei*. *J Med Microbiol* 1992; 37: 310-314.

References to books should be set out as follows: Facklan P, R, Carey P, B. *Streptococci and areococci*. In: Lennetti E H (ed) *Manual of Clinical Microbiology*, 4th edn. Washington, D.C. American Society for Microbiology 1985: 156-157.

CASE REPORTS

Case Reports which add important new information will be considered for publication. Articles published in this section should have no more than three authors, 1000 words, a summary (of about 60 words), 3-6 key words, two figures or tables, and 10 references.

LETTERS TO THE EDITOR

Readers are encouraged to write about any topic that relates to the Journal. Such letters will be published in a distinct section. They should be no longer than 500 words.

REVIEWS

Reviews of recent developments are welcome. Authors are encouraged to contact the editor to determine the appropriateness for inclusion.

ILLUSTRATIONS

Tables. Tables should follow the style as demonstrated in issues to date, and be essential to the understanding of the text. Tables should have short descriptive titles and should be numbered (1, 2, 3 etc.) as they appear sequentially in the text. If only one Table is included, it should be referred to as Table. Submit each Table on a separate sheet of paper. All abbreviations and symbols should be defined in a footnote below the Table.

Figures. To ensure that your figures are reproduced to the highest possible standards, Cambridge Journals recommends the following formats and resolutions for supplying electronic figures. Illustrations in colour will be charged at the standard rate of £200 per page.

Please ensure that your figures are saved at final publication size and are in our recommended file formats. Following these guidelines will result in high quality images being reproduced in both the print and the online versions of the journal.

Line artwork

Format: tif or eps

Colour mode: black and white (also known as 1-bit)

Resolution: 1200 dpi

Combination artwork (line/tone)

Format: tif or eps

Colour mode: grayscale (also known as 8-bit)

Resolution: 800 dpi

Black and white halftone artwork

Format: tif

Colour mode: grayscale (also known as 8-bit)

Resolution: 300 dpi

Colour halftone artwork

Format: tif

Colour mode: CMYK colour

Resolution: 300 dpi

If you require any further guidance on creating suitable electronic figures, please visit http://dx.sheridan.com/guidelines/digital_art.html. Here you will find extensive guidelines on preparing electronic figures and also have access to an online preflighting tool (<http://dx.sheridan.com/index.html>) where you can check if your figures are suitable for reproduction.

Please ensure that all graphs are exclusively submitted as 2-dimensional images.

Photographs should have the magnification and details of staining techniques shown.

Where illustrations must include recognizable individuals, living or dead and of whatever age, great care must be taken to ensure that consent for publication has been given. If identifiable features are not essential to the illustration, please indicate where the illustration can be cropped. In cases where consent has not been obtained and recognizable features may appear, it will be necessary to retouch the features to mask the eyes or otherwise render the individual so not 'officially recognizable'.

Written permission to reproduce borrowed material (figures and tables) must be obtained from the original publisher and authors, and provided with the submission. Borrowed material should be acknowledged in the captions in this style: 'Reproduced by kind permission of ... (publisher) from ... (reference)'.

PAGE PROOFS

Page proofs are sent to the author for checking. The proofs, with any minor corrections, must be returned within 48 hours of receipt. All typescripts undergo some editorial modifications, so it is important to read your proofs carefully.

PROPRIETARY NAMES

Proprietary names of drugs, instruments, etc, should be indicated by the use of initial capital letters.

ABBREVIATIONS AND UNITS

Avoid abbreviations in the title and abstracts. All unusual abbreviations should be fully explained at their first occurrence in the text. All measurements should be expressed in metric units. For more detailed recommendations, authors may consult the Royal Society of Medicine publication entitled Units, Symbols and Abbreviations: A Guide for Biological and Medical Editors and Authors or USA equivalent.

OFFPRINTS

Authors may purchase offprints if required. An offprint order form will be sent to the author with the page proofs.

(Revised 05/11/2008)
