

International Journal of Tropical Insect Science

Aims and Scope

International Journal of Tropical Insect Science serves as a forum for original research findings on tropical insects and related arthropods, with special emphasis on their environmentally benign and sustainable management. The Journal is published quarterly both in print and on the worldwide web at <http://journals.cambridge.org/JTI>. The subject areas encompassed by the Journal include: tropical agricultural pests; stored product pests; forest entomology and wood product pests; disease vectors; social insects; beneficial insects; commercial insects; arthropod–host and vector–parasite relationships; arthropod ecology and biodiversity; arthropod physiology, morphology, pathology, immunology and toxicology; arthropod taxonomy; population dynamics and genetics; arthropod molecular biology, biochemistry and biotechnology; behavioural and chemical ecology; economic entomology; biological control; host plant resistance; integrated pest and vector management; pesticide resistance and residue studies; ethnoentomology; socio-economics and technology transfer; and arthropod mass rearing and containment.

In addition to original research articles, the Journal also publishes mini-review articles, short communications, scientific notes, book reviews, new patents, announcements and reports of meetings, and obituaries of prominent scientists. Regular issues of the Journal often contain a review article on a critical or rapidly developing area of tropical insect science and which is normally submitted at the invitation of the Editors. International authorities review all manuscripts prior to publication; however, the Editor-in-Chief reserves the right of final decision.

While *icipe*—**African Insect Science for Food & Health**, (<http://www.icipe.org/>) is the proprietor of the *International Journal of Tropical Insect Science*, the journal pursues its own independent editorial policy.

Authorship

The responsibilities of the senior author when submitting a paper to *International Journal of Tropical Insect Science* are to ensure that the work has not been previously published, is not under consideration for publication elsewhere and has been approved for submission by all its authors and the institution(s) in which the work was conducted. If the paper is accepted for publication, all authors will transfer copyright of their article to the publisher, after which the publication becomes the property of the journal. It is normally the responsibility of the author(s) to obtain copyright permission to reproduce tables or figures first published elsewhere, and to ensure the correctness of all references. The senior author should also obtain explicit permission (preferably in writing) to use unpublished material cited as a 'personal communication' in the paper.

- *Voucher specimens*. Voucher specimens of arthropods serve as future reference for published names used in scientific publications. Although the deposition of voucher specimens is not required as a condition for publication, authors are encouraged to deposit specimens in an established permanent collection and to note in the published article that the expected deposition has been made and its location. The designation and proper labelling of voucher specimens is the author's responsibility, and authors should contact the curator of a voucher repository before deposition concerning the procedures required for curation.

Manuscript Preparation

Papers (including abstracts) are published in English. Authors are encouraged to translate their French manuscripts into English before submission to *International Journal of Tropical Insect Science* and to consult an expert in this language if they are not fluent in it.

Manuscripts should be prepared according to the following guidelines.

- The *title page* should include the article title and the full name(s) and address(es) of all authors, clearly indicating the author to whom correspondence should be addressed. The fax, telephone and e-mail contact of the corresponding author should also be provided. A running title of maximum of 50 characters should be indicated.
- An *abstract* of 250 words or less, to include a brief statement of the objective of the study, the methodology used and the overall conclusions and results.
- *Keywords*. List a maximum of 10 key subjects covered in the paper and including the scientific names of the major organisms studied, and any important chemical compounds.
- *Main text*. This should be divided into an Introduction, Materials and Methods, Results, Discussion, Conclusion and

Acknowledgements. Results and Discussion may be combined.

- *Data treatment.* Means should be reported in the same, or not more than one extra, number of digits as the original individual values. A measure of variability (standard deviation or standard error) should always be presented along with mean values in tabular or graphical forms. When the expression $X \pm A$ is used, always indicate whether A is variance, standard deviation or standard error. It is essential to indicate the sample size or number of replications in tables of means, correlations and other statistical tests results. Whenever the value of a test statistic (e.g. *F*, *T* or Chi-square) is presented, the associated degrees of freedom and probability value should be indicated. Estimates of models parameters (e.g. regression slope) should be accompanied by their standard error values. Mathematical expressions should be carefully written, algebraic symbols should be in italics, while suffixes and operators (e.g. $f(x)$, \log , \exp) should be in roman type. If there are many equations, a number in parentheses should identify each, flush to the right. **Duncan's Multiple Range Test (DMRT) is not acceptable for separation of means.** If necessary, consult a qualified biometrician for adequate analysis of your data. References for the method used should be included under Materials and Methods.
- *All measurements* must be stated in SI units.
- *Nomenclature.* All organisms should be identified by their Latin names, with taxonomic affiliation and authority indicated at first mention in the text. Common names should be stated where appropriate. (Consult the Entomological Society of America's list.) Chemical substances should be described by their generic or common names and defined at least once in the paper by their IUPAC name. For editorial guidelines, consult a recent issue of the journal, or the Council of Biology Editors' *Scientific Style and Format: The CBE Manual for Authors, Editors, and Publishers*, 6th Edition, 1994.
- *Referencing in text (in chronological order).* Throughout the main body of the text, the Harvard (author, date) referencing format must be followed.

Examples:

Single author: (Faleiro, 2006)

Two authors: (Reddy and Bhaskaran, 2006)

Three authors or more: (Kasina et al., 2006)

Multiple authors: (Ajayi, 1990; Nwanze and Harris, 1992; El-Banhawy et al., 2006).

- *Reference list (in alphabetical order with full journal titles).* Only articles that have been published or are 'in press' should be included. (Note that 'in press' is used only if the paper has been accepted for publication.)

Examples:

Journal articles: Delobel A. G. L. (1983) Influence of temperature and host plant condition on preimaginal development and survival in the sorghum shootfly, *Atherigona soccata*. *Insect Science and Its Application* 4, 327–335.

In press: Omoogun G. A. (1994) Design and construction of the Nitse trap. *Insect Science and Its Application* (In press). (The title of the journal/book must be stated in the reference list as well as the expected year of publication).

Books: Mengech A. N., Saxena K. N. and Gopalan H. N. B. (Eds) (1995) *Integrated Pest Management in the Tropics: Current Status and Future Prospects*. John Wiley & Sons, Chichester, New York, Brisbane, Toronto, Singapore. 172 pp. (Include the publisher's name, city of publication and page numbers).

Proceedings: Feldmann U. (1994) Some quality control parameters used in the rearing of tsetse flies, pp. 13–29. In *Techniques of Insect Rearing for the Development of Integrated Pest and Vector Management Strategies* Vol. 1. Proceedings of an International Group Training Course on Development of Integrated Pest and Vector Management Strategies. 16 March–3 April 1992, *icipe*, Nairobi, Kenya (Edited by J. P. R. Ochieng'-Odero). *icipe* Science Press, Nairobi. (Include the sponsor of the conference, dates, city and publisher of the proceedings).

Short Communications

Authors are advised that a short communication reports on a significant piece of completed research that may be either a coherent component of an on-going research project that merits a special mention, or a publication of choice that is conveniently published in a short format. (It is not simply a note of preliminary results or a condensed version of a paper that is intended for an additional publication as a full paper.) Short communications are limited to about 5 journal pages including a maximum of 2 tables and/or figures and limited number of references (maximum 15). The text of the paper should not exceed 2000 words and the abstract not more than 200 words. The basic style and submission should follow the same guidelines as for a full publication. Short Communications seldom exceed 12 typed double-spaced pages in length.

Scientific Notes

Authors are informed that a new category of submission is now possible, the Scientific Note. The Note can be used to announce an important observation or result in a minimal space, of maximum 2 printed journal pages (800 words

maximum), which may include one figure or table. The Note should emphasize the method or results with very limited introduction and discussion. For further information, contact the Editors.

Manuscript Submission

1. Papers submitted for publication should be *typed and double spaced* (including abstracts, tables and figure legends) with 3 cm margins on right and left sides and printed in a legible font, e.g. Times. All pages of the manuscript should be numbered. Tables and figures should be typed or drawn on separate pages to follow the references and not interspersed (embedded) in the text.

2. *Manuscripts* should be exclusively submitted as electronic files (preferably in Microsoft Word) via email to ijt@icipe.org. Authors are requested to maintain a back-up copy in case revision is necessary. Please note that once you have successfully submitted your manuscript you will receive an email from IJT Editorial Office thanking you for your submission. If you do not receive this email within 48 hours please contact dg@icipe.org.

3. *Figures and illustrations* are encouraged where they are a real contribution to the article. **Authors are requested to provide the original data from which Figures are generated.**

Figure legends should be typed on a separate piece of paper and should contain enough information to make the figure self-explanatory without reference to the text.

NB: Figures must be supplied as separate files, and not embedded within the document. Any required lettering or numbering must be inserted by the author.

Please ensure that your Figures are saved at final publication size and are in our recommended file formats. Following these guidelines will result in high quality images being reproduced in both the print and the online versions of the Journal.

Please ensure that all graphs are exclusively submitted as 2-dimensional images.

To ensure that your Figures are reproduced to the highest possible standards, we recommend the following formats and resolutions:

Line artwork

Format: tif or eps

Colour mode: black and white (also known as 1-bit)

Resolution: 1200 dpi

Black and white halftone artwork

Format: tif

Colour mode: grayscale (also known as 8-bit)

Resolution: 300 dpi

Combination artwork (line/tone)

Format: tif or eps

Colour mode: grayscale (also known as 8-bit)

Resolution: 800 dpi

Colour halftone artwork

Format: tif

Colour mode: CMYK colour

Resolution: 300 dpi

NB: Colour artwork may be published at the author's expense. Please ask for costs on submission.

If you require any further guidance on creating suitable electronic Figures, please visit http://dx.sheridan.com/guidelines/digital_art.html. Here you will find extensive guidelines on preparing electronic Figures and also have access to an online preflighting tool (<http://dx.sheridan.com/index.html>) where you can check if your Figures are suitable for reproduction.

4. *Tables* should be numbered consecutively and typed in double-spacing and included at the end of the paper. Table titles should be self-explanatory without reference to the text. Non-standard units of measurement should be defined in footnotes to the tables and at first mention in the text. Authors are requested to 'insert' tables to be able to format the quantities into separate cells.

5. *Supplementary Material*. There will normally be one of the following reasons for you to be supplying supplementary material to accompany the online version of your article:

- You wish to link to additional information which due to its nature does not lend itself to print media (examples- full data sets, movie or sounds files etc...)
- The Editor of the Journal has requested that you extract certain information from the original article in order to allow for space constraints of the print version.
- You have requested additional material to be available to accompany an article that does not normally allow such material to be included (example – tables to accompany a correspondence article).

N.B: Please note that no copyediting or quality assurance measures will be undertaken on supplementary material (other than to ensure that the file is intact). The authors therefore warrant that the supplementary material that they submit is in a suitable format for publication in this manner. The material shall be published online in exactly the form that it is supplied.

Please follow the following instructions to supply supplementary material to accompany the online version of your article:

- Each supplementary file must be supplied as a separate file. Do not supply this material as part of the file destined for publication in the print journal.
- Each supplementary file must have a clear title (e.g, Supplementary Figure 1).
- Provide a text summary for each file of no more than 50 words. The summary should describe the contents of the file. Descriptions of individual figures or tables should be provided if these items are submitted as separate files. If a group of figures is submitted together in one file, the description should indicate how many figures are contained within the file and provide a general description of what the figures collectively show.
- The file type and file size in parentheses.
- Ensure that each piece of supplementary material is clearly referred to at least once in the print version of the paper at an appropriate point in the text, and is also listed at the end of the paper before the reference section.

Format and file size

- File sizes should be as small as possible in order to ensure that users can download them quickly.
- Images should be a maximum size of 640 x 480 pixels at a resolution of 72 pixels per inch.
- Authors should limit the number of files to under ten, with a total size not normally exceeding 3 MB. Sound/movie files may be up to 10 MB per file; colour PDFs/PowerPoint may be up to 5 MB per file; all other general file types may be up to 2 MB per file but most files should be much smaller.
- We accept files in any of the following formats (if in doubt please enquire first):
MS Word document (.doc), Adobe Acrobat (.pdf), Plain ASCII text (.txt), Rich Text Format (.rtf), WordPerfect document (.wpd), HTML document (.htm), MS Excel spreadsheet (.xls), GIF image (.gif), JPEG image (.jpg), TIFF image (.tif), MS PowerPoint slide (.ppt), QuickTime movie (.mov), Audio file (.wav), Audio file (.mp3), MPEG/MPG animation (.mpg).

If your file sizes exceed these limits or if you cannot submit in these formats, please seek advice from the editor handling your manuscript.

6. *Proofs.* Once typeset, you will receive page proofs by email as a PDF file. It is the author's responsibility to keep the publisher informed of change of e-mail address, to check e-mails regularly and to have the software to receive files in PDF format. (You will need to have Acrobat Reader installed; freely available from <http://get.adobe.com/reader/>). The pdf file has been enabled so that you can annotate it and answer queries on screen. Return the corrected pdf proof to Mrs Diana Jones: jones.green@btinternet.com, or alternatively, detail your corrections in an e-mail to her. You should avoid substantial changes to the text. We reserve the right to charge you for any alterations (other than typesetter corrections) of more than 10% of original text.

7. *Reprints and page charges.* CUP will supply each corresponding author of an article (but not book reviewer) with a final PDF file of their article free of charge. If you wish to purchase additional offprints of your article, complete the offprint order form and return with your corrected proof. Orders must be received before the issue has gone to press.

AUTHOR CHECKLIST

It is strongly recommended that authors submitting manuscripts for publication should make a copy of the checklist on the following page and submit it with their manuscripts to the Editor-in-Chief. This will ensure that their MS is in the correct format and should make for more rapid processing and publication.

Updated: 25th July 2011

AUTHOR CHECKLIST

GENERAL

- Files exclusively submitted via Journal's homepage, with copies backed up by author.
- Pages and lines numbered throughout.
- Separate pages for references, tables and figure legends (all double spaced).
- Name and address for correspondence clearly indicated.

TEXT

- Cover page (p. 1) with: (a) Title; (b) full postal address; and (c) running title at foot.
- Abstract in English (including authors and title) and index key words on separate page (p. 2).
- Citation of references in text conforms to specifications in Instructions to Authors.
- Joint authors quoted as Macharia and Mueke; i.e. not Macharia & Mueke.
- Journal titles given in full and underlined (or in italics).
- References in text and in reference list correspond exactly.
- First and last pages of references quoted.
- Measurements in metric system.

FIGURES

- Size of figures conforms to specifications in Instructions to Authors.
- All magnifications indicated by scale bars, not in the legends.
- Legends for figures on separate pages.
- Abbreviations for figures fully listed and explained.

I have checked that the submitted manuscript conforms to the format outlined above.

(Author:)

(Date of Dispatch:)
