

Reviews in Clinical Gerontology

All material prepared for publication is assumed to be written exclusively for Reviews in Clinical Gerontology and not to have been submitted for publication elsewhere. Before acceptance papers will be refereed with occasional use of outside referees. All authors will be sent a copyright assignment form and this must be returned to the Production Controller at Cambridge University Press, at the time the manuscript is submitted.

Priority and time of publication are decided by the Editor, who retains the customary right to edit, if necessary, material accepted for publication.

Two copies of the manuscript should be prepared and both (with any illustrations) should be submitted to the relevant Section Editor*. Authors should also keep a copy for their own reference.

Reviews in Clinical Gerontology publishes high quality, scientific reviews on topics relevant to geriatric medicine and ageing, of interest to a multi-professional readership of both researchers and clinicians. A 5-year cycle aims to cover most of the relevant literature in up-to-date and comprehensive articles written by experts in the field. Other articles review new and emerging areas of interest.

Most articles are commissioned, but we also welcome non-commissioned reviews. Prospective authors are invited to propose topics or submit manuscripts for consideration for publication to the appropriate Section Editor, or to the Editorial Office (greens3@cf.ac.uk).

All material prepared for publication is assumed to be written exclusively for Reviews in Clinical Gerontology and not to have been submitted for publication elsewhere.

All published reviews are downloadable via CUP's electronic platform.

Submission

The manuscript (with any illustrations) should be emailed as an attachment to the appropriate Section Editor who commissioned the review (or to the Editorial Office if not commissioned). Details of appropriate email addresses can be found at the end of this document.

Authors are advised to retain a copy of the manuscript for their own reference.

A copy of the covering email to the Section Editor should be forwarded to Mrs Shirley Green, Editorial Assistant for information (email: greens3@cf.ac.uk).

Before acceptance, papers will be reviewed by the Section Editor and/or outside referees. When the final copy has been agreed between Author(s) and Section Editor, the review will be emailed to the Editorial Office for the Editor's final review and approval for publication.

After acceptance, all authors will be sent a Copyright Assignment Form together with the PDF proofs of their article to their email address and these must be returned promptly to the Copy Editor (within four days of receipt).

Priority and time of publication are decided by the Editor, who retains the customary right to edit, if necessary, material accepted for publication.

The publisher reserves the right to typeset material by conventional means if an author's submission proves unsatisfactory.

Manuscripts, Tables and Illustrations

Type double-spaced throughout in MS Word format and number pages consecutively. Avoid ageist language or wording that might cause offence. The word 'senile' should be avoided and 'older people' is preferred to 'the elderly'. Articles should generally contain between 3,000 and 9,000 words.

Title page

Authors should include their names and initials, their place of work and the email address of the author who will deal with any correspondence. The name and address of the author to whom correspondence, free PDF proof, and offprint order (chargeable) are to be sent should also be given, together with telephone, fax numbers and email addresses. Word count (with and without references) should be stated on the title page.

Summary and keywords

A 100-150 word summary of your review should be provided and up to five keywords (using MeSH headings).

Main text

Following an introductory paragraph(s), a brief description of the search methods used to inform the review should be provided. This can take the form of one or two sentences outlining the search terms and sources used. If more detail would be useful then a statement can be included in the text along the lines of "Fuller details of the search methods are available from the corresponding author."

Appropriate headings and subheadings should be used to break up the text and guide the reader.

Drugs should be given their approved, not proprietary names and the source of any new or experimental preparation should be given.

All abbreviations should be spelt out in full when first used in the text.

In the text, SI units should be used, but blood pressure should be expressed in mmHg and haemoglobin as g/dl. It will help international readers if you provide the traditional expression in parentheses following any unfamiliar SI quantities given in the text.

Full points should not be used after contractions or abbreviations (except for lower case abbreviations – e.g., i.e., i.v. and no.).

Spelling should follow the Oxford English Dictionary. Use the British variants of English-language spelling, so 'ageing', not 'aging'.

Tables, figures and illustrations

Tables and legends to any figures/illustrations should follow the references at the end of the text. Figures and illustrations (in TIFF or JPEG format) should be submitted in a separate file.

Patients in photographs should not be identifiable and should have their eyes masked to conceal identity.

Any identifiable photograph should be accompanied by written permission from the patient.

If material has been published elsewhere, written consent for republication in all forms and media, including electronic publication, must be obtained from the copyright holder and the correspondence submitted with the manuscript. (Please see Copyright section below).

References

References should follow the 'Vancouver style' and be numbered in the order in which they appear in the text, in superscript (e.g. 12, 14-16).

The full list of references should give the names and initials of all authors (unless there are more than six, when only the first three should be given, followed by et al.).

The authors' names are followed by the title of the article; the title of the journal abbreviated according to the style of Index Medicus; the year of publication; the volume number; and the first and last page numbers of the article.

For chapters in books, give the names and initials of chapter authors; chapter title; names and initials of editors of the book; the book title; place of publication; publisher; year of publication and first and last page number of chapter.

Authors should verify all references against the original documents before submitting the review.

Below are examples of various references:

Book reference:

32 Smith J. Clinical neurophysiology in the elderly. In: Tallis R.C., ed. The clinical neurology of old age. Chichester: John Wiley, 1989;89-97.

Journal reference:

33 Ramirez-Lassepas M, Cipolle RJ, Morillo LR, Gumnit RJ. Value of computed tomography scan in the evaluation of adult patients after their first seizure. *Ann Neurol* 1984; 15: 436-43.

Proceedings reference:

67 Ghose K. Incidence and presentation of epilepsy in an acute geriatric unit [Abstract]. Proceedings of the Fourth British, Danish, Dutch Epilepsy Congress, 7-10 September 2008, Amsterdam.

Online:

Conflict of Interest

All authors should declare any conflicts of interest and a statement of these should be included at the end of the text, before the references. If no conflicts, then this should also be stated explicitly.

Copyright

It is essential that Cambridge University Press has a signed copyright form before any manuscript can be accepted for publication. This will normally be sent to the corresponding author after acceptance.

If your contribution includes textual or illustrative material not in your copyright and not covered by fair use/fair dealing, permission must be obtained from the relevant publisher for the non-exclusive right to reproduce the material worldwide in all forms and media, including electronic publication. The relevant permission correspondence should be included with the submitted manuscript. Submission of an article implies that it has not been published and is not being considered for publication elsewhere, either in the submitted form or in a modified version. Acceptance of submitted material is on the understanding that it will not be reproduced in full or in part without the permission of the publishers. However, reasonable requests to reproduce figures appearing in Reviews in *Clinical Gerontology* will be considered favourably, subject to due recognition.

If you are in doubt about whether or not permission is required, please consult Cambridge University Press (Inicol@cambridge.org)

Proofs

Proofs will be supplied only once, electronically, to the corresponding author's email address in the form of 'PDF' page proofs.

Please remember that:

(i) Proof corrections are disproportionately expensive. For example, the insertion of three commas on a page will frequently cost as much, or more than, the original setting cost of the entire page.

(ii) If you return proofs even a few days after the date stipulated, it may be too late to include your corrections in the final version of the journal.

The publisher reserves the right to charge authors for corrections of non-typographical errors.

Offprints & Expenses

A contribution towards the expenses incurred in preparing your article of £75 will be paid to you on publication. Overseas authors may take this payment in US dollars if preferred. Alternatively you may choose to receive Cambridge University Press books to the value of £150.00. Please could you confirm which you prefer (please see honorarium form provided). The first named author will receive the expenses/books to divide as appropriate.

You will receive an automatic PDF both at first view and online issue publication stages from which you will be able to print offprints.
