This definitive and comprehensive account of the human herpes viruses provides an encyclopedic overview of their basic virology and clinical manifestations.

This group of viruses includes human simplex type 1 and 2, Epstein Barr virus, cytomegalovirus and varicella-zoster virus. The diseases they cause are significant and often recurrent. All these topics are covered in depth and the volume is fully up to date both scientifically and in terms of clinical guidelines for patient care.

The text is generously illustrated throughout and fully referenced to the latest research and developments.

**Features**
- Generously illustrated throughout and fully referenced to the latest research and developments
- Covers basic science and virology, combined with in-depth clinical coverage
- An International team of editors and contributors drawn from world’s leading centers of excellence

Colour plate section showing all aspects of human herpesviruses in glorious colour.

Extensive coverage of basic science, clinical guidelines and therapeutics.
Contents:

PART I Definition and Classification of the Human Herpesviruses
1. Overview of classification
2. Comparative analysis of the genomes
3. Comparative virion structures of human herpesviruses
4. Comparative analysis of herpesvirus-common proteins

PART II Basic Virology and Viral Gene Effects on Host Cell Functions
Alphaherpesviruses
5. Genetic comparison of human alphaherpesvirus genomes
6. Alphaherpes viral genes and their functions
7. Entry of alphaherpesviruses into the cell
8. Early events pre-initiation of alphaherpes viral gene expression
9. Initiation of transcription and RNA synthesis, processing, and transport in HSV and VZV infected cells
10. Alphaherpesvirus DNA replication
11. Envelopment of HSV nucleocapsids at the inner nuclear membrane
12. The egress of alphaherpesviruses from the cell
13. The strategy of herpes simplex virus replication and takeover of the host cell

Betaherpesviruses
14. Comparative betaherpes viral genome and virion structure
15. Betaherpes viral genes and their functions
16. Early events in human cytomegalovirus infection
17. Immediate-early CMV gene regulation and function
18. Early CMV gene expression and function
19. CMV DNA synthesis and late viral gene expression
20. CMV maturation and egress
21. CMV modulation of the host response to infection

Gammaherpesviruses
22. Introduction to the human-herpesviruses
23. Gammaherpesviruses entry and early events during infection
24. Gammaherpesvirus maintenance and replication during latency
25. EBV reactivation and lytic replication
26. Reactivation and lytic replication of KSHV
27. EBV gene expression and regulation
28. KSHV gene expression and regulation
29. Effects on apoptosis, cell cycle and transformation known with other DNA tumor viruses comparative aspects of EBV
30. KSHV manipulation of the cell cycle and programmed cell death pathways
31. Human gammaherpesvirus immune evasion strategies

PART III Pathogenesis, Clinical Disease, Host Response, and Epidemiology
Alphaherpesviruses
32. HSV-1 AND 2: pathogenesis and disease
33. HSV-1 and 2: molecular basis of HSV latency and reactivation
34. HSV-1 and 2: immunobiology and host response
35. HSV: immunopathological aspects of HSV infection
36. HSV: persistence in the population: epidemiology, transmission

PART IV Non-Human Primate Herpesviruses
37. VZV: pathogenesis and the disease consequences of primary infection
38. VZV: molecular basis of persistence (latency and reactivation)
39. VZV: immunobiology and host response
40. VZV: persistence in the population: transmission and epidemiology

PART V Subversion of Adaptive Immunity
41. HCMV: pathogenesis and disease consequences
42. HCMV: molecular basis of persistence and latency
43. HCMV: immunobiology and host response
44. HCMV: persistence in the population: epidemiology and transmission
45. HCMV: persistence in the population: potential transplacental transmission
46. HHV-6a, 6b, and 7: pathogenesis, host response, and clinical disease
47. HHV-6a, 6b, and 7: molecular basis of latency and reactivation
48. HHV-6a, 6b, and 7: immunobiology and host response
49. HHV-6a, 6b, and 7: persistence in the population: epidemiology, transmission

PART VI Antiviral Therapy
50. Clinical and pathological aspects of EBV and KSHV infection
51. EBV: Immunobiology and host response
52. Immunobiology and host response to KSHV herpesvirus infection
53. The epidemiology of EBV and its association with malignant disease
54. Epidemiology of KSHV and its association with malignant disease
55. EBV-induced oncogenesis
56. KSHV-induced oncogenesis

PART VII Vaccines and Immunotherapy
57. Monkey B virus
58. Simian varicella virus
59. Primate betaherpesviruses
60. EBV and KSHV-related viruses in non-human primates
61. Gammaherpesviruses of non-human primates

PART VIII Herpes as Therapeutic Agents
62. Herpesvirus evasion of T-cell immunity
63. Subversion of innate and adaptive immunity: immune evasion from antibody and complement
64. Antiviral therapy of HSV-1 and -2
65. Antiviral therapy of varicella-zoster virus infections
66. Antiviral therapy for human cytomegalovirus
67. New approaches to antiviral drug discovery (genomics/proteomics)
68. Identification of candidate drugs and potential mechanisms of resistance

69. Herpes simplex virus vaccines
70. Varicella-zoster virus vaccines
71. Human cytomegalovirus vaccines
72. Epstein-Barr virus vaccines
73. DNA vaccines for human herpesviruses
74. Adoptive immunotherapy for herpesviruses
75. Immunotherapy of HSV infections: antibody delivery

PART IX Herpes as Therapeutic Agents
76. Herpesviruses as therapeutic agents.
