ANNOUNCING A NEW SERIES

The Cambridge RF and Microwave Engineering Series

Series Editor
Dr Steve C. Cripps
Hywave Associates

The main motivation for this important new series of books is a large and still growing need for information and learning which has been created by the wireless revolution of the last 15 years. Consumer products such as mobile phones, satellite TV, PDAs, wireless LANs, and wireless appliance controllers are underpinned by RF/microwave technology, which is developing rapidly, with new techniques, devices and materials enabling improved communications technologies.

The series will publish books on both fundamental RF/microwave topics and on specific topical application areas for engineers who need to be brought up to speed on new developments.

Key information
Readership
Practising engineers, academic and industrial researchers, graduate students

Market
RF and microwave engineering, Electronics, optoelectronic devices, and nanotechnology, circuits.

For further information, see www.cambridge.org/series
Modeling and Characterization of RF and Microwave Power FETs

Peter Aaen
Freescale Semiconductor, Inc.
Jaime A. Plá
Freescale Semiconductor, Inc.
and John Wood
Freescale Semiconductor, Inc.

This is the first book devoted to the compact modeling of RF power FETs. In it, you will find the techniques, verification and validation procedures required to produce a transistor model. Contains real-world examples. Suitable for professionals and new graduates in the power amplifier design and modeling community.

Contents: 1. RF and microwave power transistors; 2. An introduction to the compact modeling of high power FETs; 3. Electrical measurement techniques; 4. Passive components: simulation and modeling; 5. Thermal characterization and modeling; 6. Modeling the active transistor; 7. Function approximation for compact modeling; 8. Model implementation in CAD tools; 9. Model validation; About the authors; Index.

978-0-521-87066-5 Hardback £55.00

Forthcoming Titles in the Series

Aaen, Bridges, Plá and Wood: Modern RF Power Transistors (2007)
Voinigescu and Dickson: High-Frequency Integrated Circuits (2008)
Schreurs: Microwave Techniques for Microelectronics (2008)
Young: RF Network Measurement and Analysis (2008)

If you have a specific book proposal for this series, or on any related topic, please contact Julie Lancashire (jlancashire@cambridge.org).
