Pre-eclampsia
Etiology and Clinical Practice
Edited by Fiona Lyall
University of Glasgow
and Michael Belfort
University of Utah

Pre-eclampsia is one of the leading causes of death and disability in mothers and babies. Over four million women worldwide will develop the disorder every year. This book focuses on both the scientific basis of pre-eclampsia and its management. The basic science section contains up-to-date reviews of the most exciting research developments in pre-eclampsia. The clinical chapters provide a comprehensive review of the pertinent literature, highlighting recent data and new ideas or developments in current management. There is a section in each chapter (where relevant) that deals with practical management, giving clinicians a formulated treatment plan that they can implement directly.

Features
- Covers the most recent research findings as well as giving practical management programs
- Authoritative and international, all the authors are known experts in their field
- Edited by a scientist and a clinician

2007 246 x 189 mm 566pp 48 line diagrams 31 half-tones 56 tables

Maternal-Fetal Medicine
Edited by Mary E. D’Alton
Columbia University College of Physicians and Surgeons
Errol Norwitz
Yale University School of Medicine
and Thomas F. McElrath
Harvard Medical School

Maternal-Fetal Medicine provides the busy clinician with precisely the information needed where and when it is needed. The text covers a wide variety of topics related to maternal and fetal medicine, as well as clinical questions that will challenge providers both in the outpatient setting and on labor and delivery wards. Special attention has been paid to incorporating an evidence-based approach to obstetric management, and a number of chapters have been included to assist in the management of obstetric emergencies. In total, over 1000 diseases and conditions are discussed in detail.

Features
- All content presented in concise outline format for quick consultation
- Small-size pocket guide for easy reference
- Practical, clinically oriented presentation

New Edition
Polycystic Ovary Syndrome
2nd edition
Edited by Gabor T. Kovacs
Monash University, Victoria
and Robert Norman
University of Adelaide

Polycystic ovary syndrome is very common but difficult to treat. This new edition is a thorough update on its aetiology, pathology, impact on infertility, and effective medical management. Every chapter has been extensively referenced, and there are eight new chapters.

‘… clearly written, beautifully laid out and offers concise information on the background of the disease, its diagnosis, clinical manifestations and treatments … I would recommend the book to any practitioner who regularly encounters this condition.’

Forthcoming • New Edition
Nezhat’s Operative Gynecologic Laparoscopy with Hysteroscopy
Principles and Techniques
3rd edition
Camran Nezhat
Farr Nezhat
Both from Stanford University School of Medicine, California
and Ceana Nezhat
Nezhat Medical Center, Atlanta

This is the most comprehensive book in minimally invasive gynecologic surgery to date. It catalogs a wide range of minimally invasive procedures in gynecology, oncology, and infertility treatment. It discusses endometriosis, urinary incontinence, infertility, ovarian cancer, and appendiceal disease, as well as general surgical laparoscopic issues and the management of complications during laparoscopy.

Features
• Brings all clinicians and practitioners up-to-date with laparoscope use in state of the arts surgical treatments of gynecological malignancy
• Contains completely new and expanded chapters on laparoscopic anatomy, infertility, operative hysteroscopy, pelvic floor repair
• All procedures are very well illustrated with color drawings and photos

Birth, Distress and Disease
Placental-Brain Interactions
Edited by Michael L. Power
and Jay Schulkin
Both from American College of Obstetricians and Gynecologists, Washington DC

This volume examines the role of steroids and peptides in the regulation of pregnancy and pregnancy outcome, and their long-term effects including possible influences on adult-onset diseases. Perturbations to this regulatory system can result in poor pregnancy outcome. This is a fascinating account of an important area of matero-fetal medicine.

Features
• Discusses topics of current interest for researchers and clinicians
• Contributions from internationally respected experts

Preterm Labour
Managing Risk in Clinical Practice
Edited by Jane Norman
University of Glasgow
and Ian Greer
University of Glasgow

A practical guide to the optimal clinical management of preterm labour, using the best available evidence. Preterm labour remains a challenge today, even with the latest developments summarised here. The chapters are based on common clinical scenarios and each provides a comprehensive literature review followed by evidence-based recommendations on appropriate management.

Features
• Contributing authors are all actively involved in research into the mechanisms, aetiology, treatment and associated outcomes.
• Also covers epidemiology, prediction and the prevention of preterm delivery

Operative Obstetrics
2nd edition
Edited by John Patrick O’Grady
Martin L. Gimovsky
Lucy Bayer-Zwirello
Kevin Giordano

This fully updated edition focuses on a wide spectrum of surgical procedures during pregnancy, with discussion of common surgical complications. It also considers complicated and controversial subjects such as cervical insufficiency, pregnancy termination, and instrumental delivery.

New low price
Paediatric and Adolescent Gynaecology
A Multidisciplinary Approach
Edited by Adam H. Balen
Leeds Teaching Hospitals, University Trust
Sarah M. Creighton
University College London Hospitals
Melanie C. Davies
University College London
Jane MacDougall
Addenbrooke’s Hospital, Cambridge
and Richard Stanhope
Great Ormond Street Hospital
Developmental anomalies, disorders and intersex conditions are complex conditions that demand high standards of care and treatment by all healthcare professionals involved with the management of these psychological, medical and surgical problems. Contributions from leading international experts from a wide range of disciplines, aims to distil their wealth of expertise and to provide the best possible advice and recommendations for medical intervention.

Features
• Includes information on the patients perspective and their right to know and their psychological well-being
• Provides an introductory account of normal development, before focusing on practical and clinical aspects of gynaecological disorders

Alloimmune Disorders of Pregnancy
Anaemia, Thrombocytopenia and Neutropenia in the Fetus and Newborn
Edited by Andrew Hadley and Peter Soothill
Both from University of Bristol
The alloimmune disorders of pregnancy arise from maternal immunisation to fetal blood cells. The effective prevention, diagnosis and management of these disorders involves a team management approach. This is an authoritative overview suitable for trainees in obstetrics, materno-fetal medicine, transfusion medicine and clinical immunology.

Features
• Combines pathophysiology, epidemiology, diagnosis and laboratory investigation, and treatment and management
• Multi-disciplinary team of authors provide in-depth coverage

Textbook
Obstetrics, Gynaecology and Women’s Health
Edited by Vivienne O’Connor
University of Queensland
and Gabor Kovacs
Monash University, Victoria
Thoroughly modern in approach, this textbook covers clinical topics and surgical procedures as well as providing detailed commentary on the contemporary social, psychological and economic issues that affect women’s health.

‘This comprehensive Australian textbook covers a lot more than a standard O & G text … this text is a worthwhile resource to update GPs on women’s health issues and is recommended.’

Practical Gynaecological Ultrasound
2nd edition
Edited by Jane Bates
St James’s University Hospital, Leeds
This user-friendly book provides a practical introduction to gynaecological ultrasound. Emphasis is placed on how to maximise image quality, and how to recognise normal and pathological features.

Features
• Second edition includes up-to-date patient management and scanning techniques
• Lavishly illustrated with excellent images and diagrams
• Expert contributions from leading names in their relevant fields of gynaecological ultrasound and patient management
2006 246 x 189 mm 176pp 177 half-tones 7 tables
978-0-521-67450-8 Paperback £42.00

Highly commended in the BMA Book Awards
There are many hematological complications associated with obstetrics, pregnancy and gynecology, and unfortunately, they often lead to significant morbidity or mortality for both mother and child. This book will be a valuable resource to hematologists, obstetricians, gynecologists, reproductive medicine specialists, internists, anesthesiologists and others. The chapters are written by acknowledged experts in the field, and for each condition covered the etiology, pathophysiology, clinical and laboratory diagnosis and management are discussed where appropriate.

Features
- First comprehensive textbook covering hematological complications of obstetrics, pregnancy and gynecology
- All aspects of these complications are covered in great detail
- A valuable reference for clinicians caring for women with hematological complications of obstetrics, pregnancy and gynecology

2006   247 x 174 mm   598pp   38 line diagrams
106 tables   10 graphs   2 figures

New Edition

Epidurals for Childbirth
2nd edition
Anne May and Ralph Leighton
Both from Leicester Royal Infirmary NHS Trust

This edition offers a guide to the use of epidurals in obstetrics. Care has been taken to incorporate all recent changes to techniques and management in obstetric anaesthesia. It presents clear, practical information and advice for all those involved in caring for women throughout pregnancy and labour.

Features
- The text is written with non-medical readers in mind and is easy to read and understand
- Explanations of common pitfalls and problems are included together with their management

2007 234 x 156 mm  202pp  27 line diagrams
12 half-tones  3 table
978-0-521-70461-8 Paperback £24.99
Fetal and Maternal Medicine Review publishes high quality reviews drawn from all relevant disciplines in this rapidly expanding field. Each issue includes a selection of clinical and research reviews from experts in the field. Rapid publication and a deliberate preference for authors currently active in research ensures this journal has immediate relevance to contemporary clinical practice. Subject areas covered include fetal medicine, maternal medicine, neonatology, obstetric anaesthesia, epidemiology and basic science. It is essential reading for all engaged in the care of pregnant women and neonates including obstetricians and neonologists, postgraduates training for specialist careers, specialist nursing and midwifery staff.
