Principles of Medicine in Africa

About the Authors

Eldred Parry has unrivalled experience of medicine in Africa, having worked in Ghana, Ethiopia and Nigeria, where he was both Professor and Dean of Medicine. He is now Visiting Professor and Honorary Fellow at the London School of Hygiene and Tropical Medicine, and Chairman of the Tropical Health Education Trust. He was awarded the OBE for services to medical education.

Richard Godfrey was from 1990 to 1993 Professor of Medicine at Moi University in Kenya, and has had overseas consultancies in Kenya and Zambia. Until 2002 he was Consultant Physician and Honorary Senior Lecturer at Southampton University Hospital, and at present works with Medical Emergency Relief International in programmes concerned with tuberculosis in sub-Saharan Africa.

David Maley worked as a clinician at the Medical Research Council Laboratories, Gambia from 1978-1986. He has been Honorary Consultant Physician, hospital for Tropical Diseases, London, since 1986 and has published approximately 150 papers in peer-reviewed journals, mostly on HIV, other sexually transmitted infections, and trachoma.

Geoffrey Gill has worked extensively in Africa and published widely on chronic disease care in the tropics. He is Reader in the departments of Medicine and Tropical Medicine at the University of Liverpool.

Features

- Fully revised edition of the standard text for Africa
- Expanded in scope, with colour illustrations for the first time
- Includes section on non-communicable diseases as well as comprehensive accounts of HIV/AIDS, malaria, tuberculosis and other major infections in the continent.
- Extensive references specific to African health issues

Compiled by the foremost international authorities, this is the one essential text for both students of medicine and those who practice in the front-line of medicine in Africa. This fully revised third edition combines classical internal medicine with a rich understanding of the major influences on health and disease in Africa. It puts disease into the context of family and culture and is not afraid to address the effects of inequality on health and the problems of limited resources for health care.

Forward-looking and evidence-based, this new edition reflects the emergence of new diseases and health risks in the region.

For the medical student, medical officer, or postgraduate student wanting the most complete and up-to-date reference book on medicine in Africa.

Contents

Part I. Health and Disease
- Progress, problems and urban change
- People and their environment
- Food and nutrition
- Refugees and disasters
- Managing a health service with management and financing of drug supply

Part II. Infection - General Principles
- The immune response to infection
- The diagnosis and treatment of infection
- Control and prevention of infection
- The integrated management of childhood illness
- Neonatal care
- Severe malnutrition
- The malnourished patient

Major common infections
- HIV/AIDS
- Sexually transmitted infections
- Malaria
- Meningitis
- Tuberculosis
- Poliomyelitis in adults
- Pneumonia and acute respiratory infections in children
- Diarrhoea

Helminths
- Intestinal helminths: the burden of disease
- Intestinal helminths: epidemiology and clinical features
- Cyathococci
- Hydral disease
- Schistosomiasis
- Paragonimiasis
- Loasias
- Onchocerciasis
- Lymphatic filariasis
- Guinea worm
- Trichinosis

Protozoa
- Leishmaniasis
- African trypanosomiasis
- Amoebiasis
- Intestinal protozoa

Bacteria
- Streptococcus pneumoniae
- Streptococcus pyogenes
- Staphylococcus aureus
- Nesseria meningitidis
- Haemophilus influenzae
- Tetanus
- Pertussis
- Diphtheria
- Ricin toxin infections
- Rickettsial infections
- Water and endemic syphilis
- Leptospirosis
- Cholera

49 Typhoid and other salmonella infections
50 Shigellosis infections
51 Brucellosis
52 Leptospirosis
53 Plague
54 Anthrax

55 Fungal infections

Virology

56 Measles
57 Dengue
58 Viral haemorrhagic fevers: Yellow fever, Lassa fever, Rift Valley fever, Marburg fever and Crimean-Congo fever
59 Respiratory syncytial virus (RSV)
60 Epstein-Barr virus (EBV)

Infectious diseases

62 Chicken pox
63 Monkey pox
64 Poliomyelitis
65 Rubella
66 Mumps
67 Hepatitis virus
68 Rabies

Part III. Non-Communicable Diseases

69 The growing importance of non-communicable disease
70 Diabetes
71 Asthma
72 Hypertension
73 Stroke
74 Epilepsy
75 Organisation of non-communicable disease care

Part IV. Diseases of Body Systems

76 The heart
77 The lung
78 Blood
79 The gut
80 The liver
81 The spleen
82 Body fluids
83 The kidney
84 Bones and joints
85 Endocrine and metabolic disease
86 The nervous system

Part V. Medical Aspects of Other Important Conditions in Africa

87 Pregnant patient
88 The disturbed patient
89 The disabled patient
90 Cancers and lymphomas
91 Palliative care
92 Venomous animals
93 The skin

With Buruli ulcer
94 The eye
95 Making the most of the laboratory
96 The approach to treatment

Part VI. Common Life-Threatening Emergencies

97 Emergencies

Index
Changes in the organization of health services in developing countries have led to the district level assuming more responsibility for the planning, delivery and quality of community health care. This volume has been produced to help those working in the district laboratory, and those responsible for the organization and management of community laboratory services and the training of district laboratory personnel.

‘… impressively comprehensive while still remaining very much a practical ‘bench manual.’

Tropical Doctor

1999 462pp 211 illustrations
Paperback 0 521 66547 7 £45.00

A practical and well-illustrated guide to microbiological, haematological, and blood transfusion techniques...

‘The authors have succeeded in producing a work that will fulfil an important need for developing countries. I highly recommend this book, with its Part I counterpart, to anyone with an interest in the practice of laboratory medicine.’

Pathology

2000 464pp 315 illustrations
Paperback 0 521 66545 0 £45.00

An introduction to the molecular basis of health and disease for the new generation of life scientists and medical students, which integrates molecular genetics and biochemistry with the latest clinical information, and weaves a pattern which unifies biology with syndromes, genetic pathways with developmental phenotypes, and protein function with drug action.

2002 656pp
Paperback 0 521 64481 X £30.00
Hardback 0 521 64285 X £80.00
