The Romantic Economist

Imagination in Economics
Richard Bronk
London School of Economics and Political Science

Since economies are dynamic processes driven by creativity, social norms, and emotions as well as rational calculation, why do economists largely study them using static equilibrium models and narrow rationalistic assumptions? Bronk argues that economists should look for new techniques in Romantic poetry and philosophy.

"The Romantic Economist is a miracle, combining sophisticated economics with, of all things, sophisticated literary criticism – in aid of the economics. An economics that recognized our Wordsworthian selves, Richard Bronk argues in a lucid and learned style, would do much better at the analysis of getting and spending. The world is too much with us if we do not have a humanistic science of economics. Bronk is among the handful of modern students of the economy who see this clear. Literary folk can learn from Bronk about the dismal science. But it is the tribe of the Econ who need him most. Fortunately they will find the needful assignment here a delight." – Deirdre McCloskey, author of The Bourgeois Virtues: Ethics for an Age of Commerce (2006)

Reciprocity

An Economics of Social Relations
Serge-Christophe Kolm
École des Hautes Études en Sciences Sociales, Paris

Reciprocity is a crucial part of our social and economic lives, yet until recently it has been somewhat ignored by economists. Serge-Christophe Kolm shows us that reciprocity and altruism play an important role, not just in the micro-economy of the family but also in the macro-economy of the state.

Advance praise: ‘Over the last forty years Serge-Christophe Kolm has produced a body of writings that show him to be one of the most creative and profound economists of our day. In his ability to go the core of the matter – whatever it is – he has few equals. In Reciprocity he offers the fullest analysis of the topic to date, by any social scientist – a true summa.’

This text is the most comprehensive work to date on microeconometrics, its methods and applications.

‘This book presents an elegant and accessible treatment of the broad range of rapidly expanding topics currently being studied by microeconometricians. Thoughtful, intuitive, and careful in laying out central concepts of sophisticated econometric methodologies, it is not only an excellent textbook for students, but also an invaluable reference text for practitioners and researchers.’

Economists and econometric techniques using Excel. The book’s strength is in using Monte Carlo simulation to illustrate sampling theory and the Gauss Markov theorem. I am in total agreement with the authors that computer-based exercises help to make abstract concepts operations and meaningful. Most juniors and seniors are familiar with the basic features of Excel spreadsheets. Showing them how to use SOLVER, the DATA ANALYSIS TOOLS, and to run Monte Carlo simulations, allows an instructor to take a familiar tool (Excel) and use it to introduce undergraduates to econometrics in an intuitive and non-threatening way.’

Theory of Decision under Uncertainty
Itzhak Gilboa
Tel-Aviv University and HEC, Paris

This book describes classical axiomatic theories of decision under uncertainty, critiques thereof, and alternative theories. It discusses the meaning of probability, focusing on the behavioral definition of subjective probability by Savage’s theorem. It presents non-additive and multiple prior theories, as well as the case-based approach to the formation of beliefs.

‘This is a fantastic book. It presents an intelligent, rigorous, and thought-provoking treatment of the theory of choice under uncertainty. The combination of philosophical and mathematical approaches is a treat. Graduate students and professional economists alike have much to learn from this book.’

Do marijuana users cut back on consumption when the price rises? To what degree is marijuana consumption related to drinking and tobacco usage? This book applies the economic approach to drugs to analyse consumption, pricing and the economics of legalising the use of marijuana.

'Ken Clements and Xueyan Zhao do a marvellous job in analysing and explaining the many factors that affect the demand for marijuana, the way it is priced, and the issues arising from legalising this illicit drug. If you were not convinced that economists can improve our understanding of the social problems arising from the use of marijuana, you will be convinced after reading this book.'

Markets, Money and Capital
Hicksian Economics for the Twenty First Century
Edited by Roberto Scanzieri
Università degli Studi, Bologna, Italy
Amartya Sen
Harvard University, Massachusetts
and Stefano Zamagni
Università degli Studi, Bologna, Italy
Sir John Hicks was one of the leading economic theorists of the twentieth century, jointly winning the Nobel Prize for his work in 1972. This volume addresses Hicks's intellectual heritage and discusses how his ideas suggest a
distinct approach to economic theory and policy making.

‘John Hicks, one of the greatest economists of the twentieth century, had a highly varied set of interests and viewpoints. This collection of essays, written by former students and others close to the corpus of this thought, gives deep insight into the broad theoretical syntheses which have had so much influence, together with the special nuances of Hicks’s approaches and interpretations of economic reality. The depth and thoroughness of the writers’ approaches lift this volume far above the narrow interpretations of Hicks’s work.’

The New Introduction to Geographical Economics
Second edition
Steven Brakman
Rijksuniversiteit Groningen, The Netherlands
Harry Garretsen
Rijksuniversiteit Groningen, The Netherlands
and Charles van Marrewijk
Universiteit Utrecht, The Netherlands

Geographical economics starts from the observation that economic activity is clearly not randomly distributed across space. This revised and updated introduction to geographical economics uses the most tools of economic theory to explain the who, why and where of the location of economic activity.

‘Geographical economics is a broad field which encompasses or connects with the economics of region, cities, location, trade, development, and growth. Academic research in these areas has gone in many directions and made lots of progress in recent years. The first accomplishment of this New Introduction to Geographical Economics was to digest this diverse and fast growing body of knowledge. The second achievement of this great book is to be able to present everything in a clear, comprehensive, and accessible manner.’

Arab Economies in the Twenty-First Century
Paul Rivlin
Tel-Aviv University

This book examines the relationship between demographic and economic development in Arab countries and asks why this imbalance has continued so long. It examines historic explanations for its economic failures, some of which are quite controversial.

‘Rivlin’s analysis of the Arab economies is the most thorough and astute available today, offering exceptional insights into the interactions of history, politics, and economics across the region. Rivlin focuses our attention on how the Arab world has squandered the “demographic gift” of a rapidly growing workforce and shrinking portion of dependents. He shows how political conservatism has not only been supported by oil revenues and remittances, it has blocked the reforms needed to promote modern education and rapid industrialization. As a result, rapid labor force growth has not been a source of rising productivity, but of rising unemployment, political restiveness, and radicalism.’

**Russia Since 1980**

Steven Rosefielde
University of North Carolina, Chapel Hill and Stefan Hedlund
Uppsala universitet, Sweden

Russia Since 1980 recounts the epochal political, economic, and social changes that destroyed the Soviet Union, ushering in a perplexing new order. Two decades after Mikhail Gorbachev initiated his regime-wrecking radical reforms, Russia has reemerged as a superpower. Russia will continue challenging the West until it breaks with its cultural legacy.

"For all those who believe that Russia has turned a developmental or economic, not to mention political, corner, this is a necessary and hard-hitting corrective. It also is a sobering analysis of what Russian society has undergone for almost thirty years and is likely to experience in the future. After reading this brazen and valuable analysis, few, if any, analysts will be able to look at Gorbachev, Yeltsin, and Putin in the same light as before. And for that we should be grateful."

Since the early 1990s there has been an explosion of preferential trade agreements between North and South. Arguing that this is based on competition for investment opportunities rather than free trade, Mark Manger offers a new perspective on the roles of the state and corporations in changing patterns of international trade.

‘Manger skillfully illuminates how foreign direct investment and services – two critical dimensions of globalization greatly neglected in the political economy literature to date – have driven the profusion of preferential trading arrangements. His detailed case studies persuasively demonstrate how North-South preferential arrangements raise new barriers to cross-regional trade and investment, sidestepping the cause of further trade liberalization in the World Trade Organization.’

The Chinese University of Hong Kong

As the multilateral trade talks have stalled, bilateral and regional free trade agreements have proliferated. This book situates these agreements in the context of economics, international law and international relations, and provides a comprehensive overview of the law being created by these agreements.

‘The impact of the recent proliferation of free trade agreements on the WTO-based trading system is only beginning to be felt. In a collection of thoughtful essays, the editors have assembled a provocative and insightful collection that will be an invaluable resource on FTAs, for academics, practitioners, and trade negotiators alike.’

Africa and the World Trade Organization
Richard E. Mshomba
La Salle University, Philadelphia

Mshomba provides a systematic study of Africa as it relates to the WTO. He examines the WTO’s enforcement mechanism; the WTO’s broadened mandate, illustrated by the Agreement on Trade-Related Intellectual Property Rights; agriculture in the Doha Round; issues relating to transparency in government procurement; and the endeavor to streamline assistance to developing countries through an Aid for Trade initiative.

‘Few know Africa well. Its immensity and diversity, its promise and potential, and its distresses and disappointments demand our attention and make it at once both fascinating and challenging. Richard Mshomba brings a writer’s skill, an insider’s depth and perspective, and an economist’s knowledge to Africa and the World Trade Organization, which is central to Africa’s trade, which is central to Africa’s commercial progress, which is central to Africa’s future. It will be my main Africa and trade reference from now on.’

Finance and Financial Economics

European Financial Markets and Institutions
Jakob de Haan
Rijksuniversiteit Groningen, The Netherlands
Sander Oosterloo
Ministry of Finance, The Netherlands
and Dirk Schoenmaker
Vrije Universiteit, Amsterdam

Written for undergraduate and graduate students of finance, economics and business, this textbook provides a fresh analysis of the European financial system. Combining theory, empirical data and policy, it examines and explains financial markets, financial infrastructures, financial institutions, and challenges in the domain of financial supervision and competition policy.

‘A quarter of a century ago, the European financial system consisted of segmented national markets and institutions. The process of creating a single unified system has made considerable progress but still has some way to go. This book provides an excellent account of why this process is important, the current situation, and how it will proceed in the future. It is very well suited for its target audience of advanced undergraduates and Masters students and will be useful to all those interested in the topic. I highly recommend it.’

The first graduate level textbook to cover the theory and empirics of the emerging sub-discipline of financial market microstructure. With numerous end-of-chapter exercises and a companion website, the book is ideally suited for students taking graduate courses in finance as well as being a useful reference for practitioners.

‘Thoughtful, clear and rigorous, this book offers an in-depth unified treatment of market microstructure, combining description of institutions with presentation of analytical models along with empirical methods and results. This comprehensive survey ranges from seminal contributions to latest research. It will be a reference not just for advanced graduate courses in finance and economics but also for scholars and industry practitioners. The Fall of the House of Credit
What Went Wrong in Banking and What can be Done to Repair the Damage?
Alistair Milne
City University, London

How was it possible for problems in one relatively small sector in the global financial system—the American sub-prime mortgage market—to lead to the most serious economic crisis in living memory? Alistair Milne untangles the complex world of modern banking and examines solutions to the crisis.

“The Fall of the House of Credit is a horror story, worthy of Poe, about the origins and impact of our ongoing financial and economic nightmare. A very easy and highly insightful read, for both layman and professional, the House of Credit offers a way out of our deep financial pit that’s novel and that may actually work!”

Central Banking as Global Governance
Constructing Financial Credibility
Rodney Bruce Hall
St Cross College, Oxford

Money is a social convention, but with what social consequences? Rodney Bruce Hall offers an original analysis of central banking as global governance, exploring the social relations of money, credit, and debt, and identifying the mechanisms of governance as social rather than material processes.

‘In this challenging and timely book, Rodney Bruce Hall develops an innovative social theory of monetary relations. The implications he draws for governance at both the domestic and international levels are provocative and very likely to stimulate productive debates. Central Banking as Global Governance deserves to reach an audience far beyond specialists.’

### Risk Management for Central Banks and Other Public Investors

Edited by Ulrich Bindseil  
European Central Bank, Frankfurt  
Fernando Gonzalez  
European Central Bank, Frankfurt  
and Evangelos Tabakis  
European Central Bank, Frankfurt

The turmoil caused by problems in the American mortgage market has served as an important reminder of the interdependency of global financial institutions. This book presents a survey of the fundamental issues surrounding risk management and shows how central banks and other public investors can create better risk management systems.

‘How should public institutions – central banks in particular – approach investment and risk management? What should be similar to private asset management, and crucially, what should be different and why? Such important questions have received remarkably little attention. Against this background, Bindseil, Gonzalez and Tabakis have produced a timely and authoritative guide to the state of the art, and a blueprint for moving forward. Their book will be of great interest not only in central banking, but in all of financial asset management – public and private, practitioner and academic.’

Public Economics and Political Economy

Public Economics and the Household
Patricia Apps
University of Sydney
and Ray Rees
Ludwig-Maximilians-Universität München
Economic models in much of the public economics literature have been slow to reflect the significant changes towards double-income households throughout the developed world. This graduate-
level text shows how we can develop a more sophisticated model of household economics that allows for multiple income earners and shared decision-making.

‘Most of economic theory assumes that human beings spend their life alone. In reality most of us live in families and our decisions are taken collectively as a couple, often with children, and economic incentives are at play as well in intra-family interactions. This wonderful book by two leaders of the field fills this gap. It brings together a vast literature in a coherent framework and provides a host of new insights on the economics of the family and the taxation of it. A must read for any scholar in public finance and anybody interested in the economics of the family. The book is mostly theory but the connection with real world tax issues is never forgotten. A splendid achievement.’

Mission and Money goes beyond the common focus on elite universities and examines the entire higher education industry. It presents original research on revenue sources from tuition, donations, research, patents, endowments, and other activities. It considers lobbying, distance education, and the world market, as well as advertising, branding, and reputation.

‘An excellent volume. The art of university administration is finding the right balance between revenue raising and the academic mission so that neither dominates the other. In the one case, the university would cease being a university at all and would be just a business, while in the other it might go bankrupt. Given the current emphasis on universities in the marketplace, this is a timely volume with a thorough and useful treatment of the various revenue sources in play and how they influence the more lofty mission of the university.’

Fiscal Governance in Europe
Mark Hallerberg
Hertie School of Governance, Berlin and Emory University, Atlanta
Rolf Rainer Strauch
European Central Bank, Frankfurt
and Jürgen von Hagen
Rheinische Friedrich-Wilhelms-Universität Bonn

This book presents a theoretical framework to discuss how governments coordinate budgeting decisions. Based on original research on European Union countries from 1985 to 2004, the authors argue that the effectiveness of a given form of fiscal governance depends crucially upon the underlying political system.

‘Over the past several years, Mark Hallerberg, Rolf Strauch and Jürgen von Hagen have made path breaking contributions on the way fiscal institutions shape budgetary behaviour and on the interplay between fiscal policy and politics in Europe. This book is the summa of such intellectual journey. It brings together and updates their theoretical and empirical research and provides new insights on fiscal governance in the European Union. As the financial crisis shakes the foundations of policy making in Europe and beyond, this book will help understand why countries’ budgetary policies will react in different ways and how fiscal institutions may evolve as a response to new economic and policy challenges.’

Learning, Policy Making, and Market Reforms
Covadonga Meseguer
Center for Research and Teaching in Economics (CIDE), Mexico City

This is the first study that tests the impact of policy learning on economic policy choices across time and space. It supports the popular explanation that, on average, governments around the world adopted privatization and trade liberalization, and sustained open capital accounts, as a result of learning from others.

‘Learning, Policy Making, and Market Reforms is a benchmark study of the influence of ideas on policy changes. Why do politicians

This book is the first to use modern social science methodology systematically to explain why some countries are democracies while others are not. Why does democracy sometimes persist and consolidate while other times it collapses? The treatment shows that whether or not a society becomes democratic depends on several factors.

This book integrates the problem of violence into a larger social science and historical framework, showing how economic and political behavior are closely linked. In most societies, which we call natural states, the polity limits violence by manipulating the economy, creating privileges. In contrast, modern societies create open access to economic and political organizations, fostering political and economic competition.

Principles of Conflict Economics
A Primer for Social Scientists
Charles H. Anderton
College of the Holy Cross, Massachusetts
and John R. Carter
College of the Holy Cross, Massachusetts

Drawing on a half-century of scholarship, this book presents a primer on the key themes and principles of conflict economics. Although much work in the field is abstract, it is made accessible to scholars, students, and policymakers by relying on historical data, relatively simple graphs, and intuitive narratives.

‘This is the most intuitive and comprehensive book on conflict economics available. The authors are to be commended for showing just how much about conflict can be understood using the basics of production possibilities, consumer choice, and game theory at the principles level. The coverage of conflict data sets is also novel.

Anderton and Carter set the mark for establishing conflict economics alongside more traditional undergraduate economic field courses such as labor and industrial organization.’

The book is a comprehensive survey of the economics of fiscal federalism and its application to federations of all sorts around the world. It outlines in detail the assignment of functions among various orders of government in federation, including public spending, revenue-raising, regulation, and intergovernmental transfers.

‘When it comes to fiscal federalism, Robin Boadway and Anwar Shah together possess what is probably an unbeatable combination of theory, empirical work and field experience around the world. They have now, literally, written the book on this increasingly important subject.

The result is a comprehensive and well-written treatment from which both experts and novices will benefit. Anyone who is interested in either the principles or practices of decentralization and fiscal federalism in general or in any specific country who wants to consult this book for years to come.’

Health Care for Us All
Getting More for Our Investment
Earl L. Grinols
Baylor University, Texas
and James Henderson
Baylor University, Texas
Health Care for Us All challenges the common belief that health care problems in the United States are difficult and possibly insoluble. It examines what Americans want from health care spending and applies an efficiency filter to identify a virtually unique framework that will meet their needs.

‘Two Baylor economists apply economic principles, rather than political considerations, to health care reform and conclude that we can achieve universal coverage, lower costs, and satisfied consumers and patients. Their important contribution to the debate is showing that the key to reforming our health care system isn’t expanding government control, which has largely caused most of the current problems, but getting the economic incentives right.’

The Economic Psychology of Tax Behaviour
Erich Kirchler
Universtitat Wien, Austria
Foreword by Valerie Braithwaite
Australian National University, Canberra
Kirchler uses economic-psychological research on tax evasion to develop a model based on the interaction climate between tax authorities and taxpayers. Featuring chapters on the social representations of taxation, decision-making and self-employed income tax behaviour, this paperback edition is suited to students reading economic psychology, behavioural economics, and public administration.

‘This is an interesting, comprehensive and excellent examination of the behavioural aspects of tax compliance and evasion – based on insights from social and cognitive psychology, behavioural economics, and game theory. Kirchler’s book considers the role of economic incentives in tax compliance, but he also argues that factors such as moral considerations, fairness concerns, and the citizens’ trust in the state play a crucial role. His broad approach makes the book interesting for both tax authorities and social scientists alike.’

How to Price

A Guide to Pricing Techniques and Yield Management

Oz Shy
Wissenschaftszentrum Berlin für Sozialforschung

Over the past four decades, business and academic economists, operations researchers, marketing scientists, and consulting firms have increased their research on pricing and revenue management. This book introduces a wide variety of research results on pricing techniques in a unified, systematic way and at varying levels of difficulty.

‘This book provides an extremely valuable introduction to the art of pricing’. The strength of the book lies in its judicious choice of the topics to be covered and accessibility to a wide range of audiences from advanced undergraduates to practitioners who may have limited technical knowledge. In particular, the coverage of the book on ‘yield management’ truly stands out, where Oz Shy offers a very elegant, intuitive, and simple presentation of dynamic pricing techniques with capacity constraints that have been widely used in the airline and hotel industries. In summary, the book is bound to be the best single source for anyone interested in this broad topic of practical importance.’

Capitalizing on significant developments in social science over the past twenty years, this book explores both the positive and negative aspects of power, identifying opportunities and threats. It shows how managers and employees can manage power in order to make it a constructive force in organizations.

'The book provides the most comprehensive synthesis of the different theoretical approaches to the topic of strategy. I agree entirely with Professor Becerra’s view that the most useful way to think about any company is in terms of an entity whose twin goals are: first, to create value and, second, to appropriate a fair share of this value for its own shareholders. I recommend this book as the first thing that any Ph.D. student in strategy should read before tackling the details of the strategy literature in the doctoral seminars. From now on, it will be required reading in my own Ph.D. seminars.’

The Origin and Development of Financial Markets and Institutions
From the Seventeenth Century to the Present
Edited by Jeremy Atack
Vanderbilt University, Tennessee
and Larry Neal
University of Illinois, Urbana-Champaign
Finance has proved to be one of the most important causal factors in economic performance. In a series of original essays, leading historians examine how financial innovations from the seventeenth century to the present have challenged established institutional arrangements, forcing change and adaptation by governments, financial intermediaries, and financial markets.
‘Atack and Neal bring together a brilliant, provocative and authoritative set of essays on financial history. The essays share the desire to link social, political, and economy history with finance, to place financial development within the story line that connects financial changes to the development of commerce, industry, and politics. The coverage is broad in space and time, covering all aspects of finance – money, banking, central banking, securities markets, and financial crises – in many countries and over four centuries of change. The authors are the leading authorities in their field. Although the articles are carefully argued and rich in quantitative detail, they are exceptionally lively because they combine the discipline of economic analysis with a broader historical narrative that brings to life the personal histories of financiers as part of the broader arc of European and American financial development. The book is more than a collection of great studies of the past; it is also a tool to teach historians how to think about finance, and to teach financiers how to think about history.’

Economic Growth
A Unified Approach
Olivier de la Grandville

How can society improve its living standards? What are the conditions necessary for prosperity? These are the questions that define the essence of growth theory. In this user-friendly book, Olivier de la Grandville provides a fascinating introduction to the theory of economic growth.
Advance praise:
‘Olivier de La Grandville has written a sparkling, wide-ranging and provocative analysis of economic growth models. Noteworthy is his analysis of the difficulties in using optimal control theory and his development of an alternative approach more closely related to Solow’s original growth model. He strongly emphasizes the importance of the elasticity of substitution. The work is marked by a large number of novel specific analytic results which will be of wide use.’

argues that the success or failure of development strategies depends largely on the role of governments.

"Development and transition pose extremely difficult challenges. In these masterly Lectures, Justin Lin, now the World Bank's Chief Economist, brings to these complex subjects a profound understanding of the problems they raise and also unusual insights from his first-hand experience with China's spectacular performance. The Lectures are a tour de force."

The Democratization of Invention

Patents and Copyrights in American Economic Development, 1790–1920

B. Zorina Khan
Bowdoin College, Main

This book examines the evolution and impact of American intellectual property rights during the ‘long nineteenth century’. America is compared to Britain and France, whose institutions reflected their oligarchic origins. The United States created the first modern patent system and its politics were the most liberal worldwide.

Why We Disagree About Climate Change

Understanding Controversy, Inaction and Opportunity

Mike Hulme
University of East Anglia

Mike Hulme provides a unique insider’s account of climate change and the diverse ways in which it is understood. He uses different standpoints from science, economics, faith, psychology, communication, sociology, politics and development to explain why we disagree about this important phenomenon.

‘This is a very rare book. A scientific book about climate change, that deals both with the science, and our own personal response to this science. It does all this supremely well, and should be compulsory reading for both sceptics and advocates. However, it does so much more, it is a book of great modesty and humanity. It uses climate change to ask questions more broadly about our own beliefs, assumptions and prejudices, and how we make individual and collective decisions.’

Social and Environmental Policies in EC Procurement Law

New Directives and New Directions

Edited by Sue Arrowsmith
University of Nottingham
and Peter Kunzlik
City University, London

The social and environmental objectives which inform governments’ purchasing decisions can make it harder for some suppliers to participate in public procurement. This volume of essays examines how best to find a balance between trade concerns and the desire of national governments to use procurement as a policy tool.

Sustainable Development in Practice
Sustainomics Methodology and Applications
Mohan Munasinghe
Munasinghe Institute for Development, Sri Lanka
This book provides a practical analysis of current sustainable development prospects by applying the innovative sustainomics framework. It explains the key principles underlying sustainomics, illustrates the methodology with wide-ranging empirical and policy-relevant case studies, and is useful for students, researchers, policy analysts and development practitioners.

‘This book is unique … Munasinghe brings together a wide range of skills. As a respected and award winning researcher, his analysis is rigorous and well-documented. As a senior decision maker and manager with over 35 years of experience in the development arena, his advice is eminently practical. Finally, as a veteran professor with an enviable record of publications, he presents his arguments lucidly and convincingly. This text, written by a leading world authority on sustainable development, is an invaluable resource.’

Fraunhofer Institute for Systems and Innovation Research, Karlsruhe, Germany
This book is the first to highlight the opportunities and challenges of introducing hydrogen as an alternative fuel source from economic, technical and environmental perspectives. Through its multidisciplinary approach, it provides researchers and decision makers in academia and industry with a wide-ranging knowledge base concerning the hydrogen economy.

‘This multi-disciplinary book significantly broadens the perspective on the prospects of hydrogen as a universal energy vector and fuel, and provides a very important addition to the policy debate over future sources of transportation energy and the role hydrogen can play for the decades to come.’

The Garnaut Climate Change Review
Ross Garnaut
Australian National University, Canberra

The Garnaut Climate Change Review is one of the most important reports to be published in Australia for many years and examines the impacts of climate change on the Australian economy, the costs of adaptation and mitigation, and the international context in which climate change is experienced and negotiated.

‘The Garnaut Review is of special importance in its combination of a global view and the perspective from one country. It adopts a way forward for global action on climate change and how Australia can and should manage its own role. At the same time it deepens the shared analytical basis for action. It is a great achievement.’

Oil, Water, and Climate
An Introduction
Catherine Gautier
University of California, Santa Barbara

Population and development pressures are at an all-time high, as are our energy and water consumption. Today, anxieties over global and national energy, water and climate security are growing. Tough decisions and major reforms are needed and this book provides excellent introductory material to begin to address these problems.

'...Catherine Gautier deserves congratulations for creating a textbook that not only deals with these three topics, but most important, also draws them together and shows how they are connected. Gautier’s perspective is global and as such, the book will broaden students’ perspectives. … Oil, Water and Climate does a great job of making these important topics accessible to undergraduate students. It brings together many important ideas in Earth science, technology and global policy.'
