Towards a New Paradigm in Monetary Economics
Joseph E. Stiglitz and Bruce Greenwald

Written out of the authors’ original thoughts and empirical observations while serving in some renowned economic organizations, the book provides a pioneer treatment of critical topics in monetary economics and insightful policy implications, among which are the 1991 US recession, the liberalization of financial markets, and the East Asian Crisis.

Professor Joseph E. Stiglitz is the winner of the 2001 Nobel Prize for Economics.

Dynamic Macroeconomic Analysis
Theory and Policy in General Equilibrium
Edited by Sumru Altug, Jagjit S. Chadha and Charles Nolan

This book applies modern micro-founded macroeconomic models to some of the most important economic policy questions facing monetary and macroeconomic policymakers. Technically rigorous and summarising major research breakthroughs, this book gathers specially commissioned chapters from leading experts and offers a road map to the future of macroeconomics.

Macroeconomics in Emerging Markets
Peter J. Montiel
A relatively non-technical textbook in macroeconomics designed specifically for emerging economies, this book provides a model that upper-level undergraduate students can use to understand economic events in their countries. It also provides analysis of key macroeconomic problem areas such as fiscal deficits, financial sector reform, and exchange rate policies.

A Theory of Economic Growth
Dynamics and Policy in Overlapping Generations
David de la Croix and Philippe Michel

‘A comprehensive, up-to-date primer on the dynamics of growth theory and fiscal policy, written by two recognized experts in the field. For graduate students, researchers and policy-makers, this book illustrates how to harness solid economic theory in the service of cutting-edge debates about education, social security reform, and public debt management.’

Asymmetric Information in Financial Markets
Introduction and Applications
Ricardo Bebczuk

Asymmetric information and its theoretical and practical application now forms part of the basic tool kit of every financial economist. This book aims to explain this concept without jargon and by reducing mathematical complexity. It is extremely accessible and fills an important gap in the market.

Financial Derivatives
Pricing, Applications, and Mathematics
Jamil Baz and George Chacko

This book is a graduate level manual on the pricing of financial derivatives. It allows the reader with basic knowledge of finance, calculus, and probability and statistics to understand the most powerful tools in applied finance. The three-fold focus is on equity derivatives, interest rate markets, and the mathematics of pricing. These concepts are applied in turn to the valuation of conventional and more specialized cases such as equity derivatives, government bonds, corporate bonds, swaps, caps, and swaptions.

Introductory Econometrics for Finance
Chris Brooks

An introductory econometrics book for finance students. The approach adopted is data and problem driven, giving students the skills to estimate and interpret models, while having an intuitive grasp of the underlying theoretical concepts. The book assumes no prior knowledge of econometrics, and covers important modern topics.

Monetary Policy Transmission in the Euro Area
Edited by Ignazio Angeloni, Anil Kashyap and Benoît Mojon

This book offers the most systematic analysis available of the impact of European Central Bank monetary policy on the national economies of the Euro-zone. Analysing macro and micro-economic evidence, with chapters by central bank economists, including a discussion chapter by eminent macroeconomists, it is an essential contribution to the latest research.

Advances in Economics and Econometrics: Theory and Applications

Eighth World Congress
Edited by Mathias Dewatripont, Lars Peter Hansen and Stephen J. Turnovsky

These volumes provide valuable, up to date surveys of the frontiers of econometrics and economic theory. They are essential reading for anyone interested in modern quantitative economics.

JAMES HECKMAN, NOBEL LAUREATE, UNIVERSITY OF CHICAGO

These volumes contain a wonderful collection of essays. Each one provides a review of the most important developments in a particular area of economics, written by distinguished members of the profession. Auctions, behavioral economics, competition policy, econometric methods and applications, and applied contract theory are among a host of subjects covered. Readers interested in the frontiers of economic research will find these volumes invaluable.
