**Capnography: Clinical Aspects**
Carbon Dioxide over Time and Volume
Edited by J. S. Gravenstein
University of Florida
Michael B. Jaffe
Respironics-Novametrix, Connecticut
and David A. Paulus
University of Florida

Carbon dioxide in the expired gases gives evidence of life processes and the adequacy of breathing. The amount and concentration of the gas in the breath can be measured and monitored with instruments called capnographs, which are used whenever and wherever the breathing of a patient might be affected by disease or treatment. The book deals not only with the clinical application of these devices but also with the basic physiology of the generation and transport of carbon dioxide in the body.

- Applications of capnography not only in the OR and the ICU but also in many non-hospital settings
- A sophisticated discussion of the physiology of carbon dioxide by several well known authors
- A unique history of capnography
  - 2004 246 x 189 mm 460pp
  - 208 line diagrams 49 tables
  - 978 0 521 54034 6 (0 521 54034 8)
  - Hardback £65.00

**Anaesthetic Aide Memoire**
Second edition
John Urquhart
West Suffolk Hospital, Bury St Edmunds
and John Hall
West Suffolk Hospital, Bury St Edmunds
With Pamela Chrispin
Jeremy Mauger
Deborah Meldrum
and John Slade

This new and fully updated edition of Anaesthetic Aide-Memoire provides a compilation of key lists, numerical data, physiological and pharmacological formulae, procedural algorithms and important information on illnesses pertaining to anaesthesia.

- 2004 186 x 123 mm 192pp
- 20 line diagrams
- 978 1 841 10192 7 (1 841 10192 3)
- Paperback £17.99

**Anaesthetic Equipment**
Principles and Practice
Angella Bryan
and Nigel Harper

Using an innovative layout of composite diagrams with detailed labelling, and facing pages of explanatory text, this book covers essential features of all key equipment in use by the modern anaesthetist, explaining clearly how each device works and highlighting the common pitfalls that might be encountered.

- 2004 246 x 189 mm 180pp
- 978 1 841 10143 9 (1 841 10143 5)
- Paperback £27.50

**Anaesthesia from First Principles**
Ian Curran
St Thomas’ Hospital, London
and Matt Jones
William Harvey Hospital, Ashford, Kent

This concise book provides an introductory account of anaesthesia for trainees not necessarily going on to pursue anaesthesia as a career, such as medical undergraduates or ODAs, and for related groups such as postgraduate nurses or theatre nurse and postgraduate trainees in accident and emergency medicine, all of whom require a basic knowledge of the essentials of anaesthesia.

- 2005 234 x 156 mm 208pp
- 35 line diagrams
- 978 1 841 10157 6 (1 841 10157 5)
- Paperback £14.99
- Publication October 2005

**Recent Advances in Anaesthesia and Intensive Care**
Volume 23
Edited by J. N. Cashman
University of London
and R. M. Grounds
University of London

Recent Advances in Anaesthesia and Intensive Care 23 is the latest volume in this very successful and long-established series (previously entitled Recent Advances in Anaesthesia and Analgesia) to present a series of cutting-edge topics for anaesthetists from some of the world’s leading authorities in their subjects.

**Recent Advances**
- 2005 234 x 156 mm 240pp
- 24 line diagrams 3 half-tones
- 978 1 841 10145 3 (1 841 10145 1)
- Paperback £35.00

**Physics for Anaesthesia**
Ted Lin
Glenfield Hospital, Leicester

Complex principles are illustrated with simple and easily reproducible line diagrams and uses “real world” examples throughout. It will become an essential reference for all healthcare personnel who need to know about the physical principles underlying anaesthetic practice.

- 2005 234 x 156 mm 272pp
- 100 line diagrams
- 978 1 841 10074 9 (1 841 10074 9)
- Paperback £24.99
- Publication October 2005
Epidurals for Childbirth
Second edition
Anne May
Leicester Royal Infirmary

The only guide currently available on epidurals in obstetrics. The book is fully comprehensive, covering all medical aspects of epidurals including the relevant anatomy and physiology. This handbook will be an ideal easy reference for all junior anaesthetists, midwives, and operating department practitioners.

— 2006 234 x 156 mm 208pp

Top Tips in Anaesthesia
Edited by T. M. Perris and C. S. Brudney
Duke University Medical Center, Durham

This book presents the essentials for those working in anaesthesia. It contains, short and fuller descriptions of techniques that experts have found to be useful in difficult situations. It is not a comprehensive document on the entire conduct of anaesthesia but a sample of advice on selected topics.

— 2005 186 x 123 mm 80pp

Morbid Obesity
Peri-Operative Management
Edited by Adrian O. Alvarez
IMETCO, Buenos Aires
Edited in association with Jay B. Brodsky
University School of Medicine, Stanford
Martin A. Alpert
University of Missouri School of Medicine, Columbia
and George S. M. Cowan

Morbid obesity can have a number of important implications for anaesthetic practice. This comprehensive book, written by international experts in the field, covers all aspects of obesity that may impact upon the practice of the anaesthetist, intensivist or other healthcare professional dealing with the obese patient.

— 2004 246 x 189 mm 434pp

Textbook of Obstetric Anaesthesia
Edited by Rachel E. Collis
University Hospital of Wales
Felicity Plaat
Queen Charlotte’s Hospital, London
and John Urquhart
West Suffolk Hospital

Textbook of Obstetric Anaesthesia is a comprehensive, completely up-to-date and fully illustrated account of all aspects of modern obstetric anaesthesia, as practised today. Written by a multidisciplinary team of expert contributors, it features state-of-the-art chapters covering everything from departmental audit to cutting-edge practice for neonatal resuscitation and administration of mobile epidurals.

Fundamentals of Anaesthesia
Second edition
Edited by Colin Pinnock
Alexandra Hospital, Redditch
Ted Lin
Glenfield Hospital, Leicester
and Tim Smith
Alexandra Hospital, Redditch
Edited in association with Robert Jones
Glenfield Hospital, Leicester

Written and edited by a team of expert contributors, it provides a comprehensive but easily readable account of all of the information required by the FRCA Primary examination candidate and has been expanded to include more detail on all topics and to include new topics now covered in the examination.

Fundamentals of Anaesthesia manages to combine common sense with concise information to be an all-in-one anaesthesia textbook. Although it is aimed at trainees sitting the primary FRCA, I suspect it will be useful for the final fellowship, for anaesthetists returning to clinical work after time out, and for consultants wanting a brief overview for teaching purposes.”

Fundamentals of Regional Anaesthesia
H. B. J. Fischer
Alexandra Hospital, Redditch
and C. A. Pinnock
Alexandra Hospital, Redditch

This superbly illustrated book provides a comprehensive overview of all aspects of regional anaesthesia for the trainee and practising anaesthetist alike. Written by a team of experts who are well known in the field of regional anaesthesia, the book is structured logically, with essential anatomy being followed by indications and then the block techniques themselves.

- Hardback £30.00

Anesthesia for the High Risk Patient
Edited by Ian McConachie
Blackpool Victoria Hospital

This book provides practical information on the management of high risk patients presenting for surgery as well as sufficient background information to enable an understanding of the principles and rationale behind their anaesthetic management. The content reflects the needs of a broad readership and presents information not readily available in similar books (e.g. a summary of all CEPOD reports, perioperative renal failure, the role of the cardiology consult and indications for admission to ICU and HDU). The format of each chapter is designed to provide rapid access to important information, with key facts and advice presented concisely. Important references that highlight controversies within a subject, and suggestions for useful further reading are also presented.

European Journal of Anaesthesiology
Editor-in-Chief: B J Pollard
Manchester Royal Infirmary
Editor: Thomas Crozier
Georg-August Universität, Göttingen
Published by the European Society of Anaesthesiology

The European Journal of Anaesthesiology publishes original work of high scientific quality. Preference is given to experimental work or clinical observation in man, and to laboratory work of clinical relevance. The Journal also publishes commissioned reviews by an authority in a field of interest to those working in anaesthesiology or intensive care. Abstracts of scientific meetings, editorials, book reviews, news and notices are also included.

British Journal of Anaesthetic and Recovery Nursing
Editor: Melanie Oakley
Epsom General Hospital, Surrey

Published quarterly, the British Journal of Anaesthetic and Recovery Nursing is devoted to issues affecting clinical practice in the field of peri-anaesthetic nursing and is the official publication of the British Anaesthetic & Recovery Nurses Association (BARNA). The Journal was launched in January 1999, following on from the previous BARNA publication, Anaesthetic & Recovery Nurse, which was established in 1991. The Journal publishes articles from the specialty of anaesthetic and recovery nursing, the content includes editorials, original articles, brief reports, reviews, conference reports, news and notices.

The Anaesthesia Viva
A Primary FRCA Companion
Volume 1: Physiology and Pharmacology
Second edition
John Urquhart
West Suffolk Hospital, Bury St Edmunds
Mark Blunt
Queen Elizabeth Hospital, King Lynn
and Colin Pinnock
Alexandra Hospital, Redditch
With contributions by Mark Dixon

Now expanded and updated to reflect
the most recent changes in the viva
examination, this two volume series is
an indispensable aid to success in the
anaesthesia viva examinations and
appropriate to both the Primary FRCA
and the Final FRCA.

‘…a useful revision manual for
primary examination candidates.’

Pharmacology for Anaesthesia and Intensive Care
Second edition
T. E. Peck
Royal Hampshire County Hospital
S. A. Hill
Southampton University Hospital
and M. Williams
Port Headland Regional Hospital, Western Australia
With contributions by A. S. Grice
Royal Perth Hospital, Australia
and D. S. Aldington
Churchill Hospital, Oxford

Foreword by Peter Hutton
Fully updated and expanded, with additional contributions from experts in the field, to include all new drugs available to the anaesthetists and intensive care specialist. Coverage of basic pharmacological principles has expanded, and more space has also been devoted to antibiotics, an important area with hospital infections becoming increasingly prevalent. As a value-for-money package. This book continues to provide its readers with the clearest, most concise and comprehensive coverage of all aspects of pharmacology for junior and trainee anaesthetists, critical care nurses and healthcare professionals.

Paperback £30.00

Intensive Care and Pain Management

Radiology for Anaesthesia and Intensive Care
Richard Hopkins
Cheltenham General Hospital
Carol Peden
Royal Bath United Hospital
and Sanjay Ghandi
Bristol Royal Infirmary

This concise, fully illustrated book covers key aspects of imaging that are of relevance to anaesthetists and intensivists, and examines all imaging modalities that are likely to be called upon (plain film, CT, MRI etc.). The book is written by a team of radiologists and anaesthetists, providing a dual perspective.

Airway Management

Tracheostomy: A Multi-Professional Handbook
Edited by Claudia Russell
Addenbrooke’s Hospital, Cambridge
and Basil Matta
Addenbrooke’s Hospital, Cambridge
Tracheostomy: A Multi-Professional Handbook is written by a multidisciplinary team of authors to give a unique perspective of this increasingly widely-used technique and will support research-based care and management and deliver patient-focused rehabilitation. It covers everything from the basics of tracheostomy and all aspects of operative care of the patient.

Fundamentals of Operating Department Practice
Edited by Ann Davey
Liverpool John Moores University and Colin S. Ince
Whiston Hospital, Prescott

Fundamentals of Operating Department Practice seeks to embrace the knowledge needed for the generic theatre worker, be they nurse or anaesthetic assistant, as envisaged in the Bevan Report. It clarifies the underlying principles needed for an understanding of anaesthetic and surgical practice.

Emergency Medicine and Critical Care
An Introduction to Clinical Emergency Medicine
Guide for Practitioners in the Emergency Department
Edited by S.V. Mahadevan
Stanford University School of Medicine, California
and Gus M Garmel
Stanford University School of Medicine, California

An Introduction to Clinical Emergency Medicine is a newly-conceived textbook, focusing on the skills necessary to provide emergency care, aimed primarily at medical students. Emergency health care professionals, such as technicians, prehospital care providers, physician assistants, nurses and nurse practitioners will find this book stimulating and tremendously valuable as well.

2005 246 x 189 mm 450pp 195 tables 320 figures

Clinical Intensive Care and Acute Medicine
Second edition
Ken Hillman
University of New South Wales, Sydney
and Gillian Bishop
Liverpool Health Services

The core of the book focuses on areas common to all critically ill patients including fluid therapy, sedation, shock, infection and other central topics. This key understanding of basic pathophysiological principles provides an excellent launch pad for the section on individual disease entities.

‘While the book is specifically directed at junior medical officers, it will also be useful as an aid to the part-time intensivist and postgraduate medical and nursing education. Even for those intensive care units that already have well defined protocols, this book will fulfil an invaluable educational role. This book is an essential addition to all intensive care libraries.’

Color Atlas of Emergency Trauma
Edited by Diku P. Mandavia
University of Southern California
Edward J. Newton
University of Southern California
and Demetrios Demetriades
University of Southern California

This comprehensive, full-color atlas guides clinicians in managing trauma patients by using the physical cues paramount to the emergency setting. The 700 images bring the reader to the bedside of patients with the full spectrum of traumatic injuries while the descriptive text discusses management guidelines, workup protocols, and common pitfalls.

‘This text is a very exciting tour of trauma through a colourful lens … this book presents a unique colourful survey of excellent trauma photographs from head to toe … this book brings to life many trauma conditions that might otherwise take a lifetime of experience to encounter.’

Principles and Practice of Emergency Neurology
Handbook for Emergency Physicians
Edited by Sid M. Shah
Michigan State University
and Kevin M. Kelly
Drexel University, Philadelphia

This symptom-based handbook guides the emergency physician in the diagnosis and management of common and complex neurological disorders. Integrating fundamental neurological concepts with the practical demands and realities of emergency care, this reference provides succinct, crucial information for all emergency physicians who diagnose and manage neurologic disorders.

‘This is a carefully edited and carefully written multiauthored book ... ER physicians will enjoy reading this book — and learn much from it too. 4 stars.’

Epidemiology and Medical Statistics

TEXTBOOK

Essential Epidemiology
An Introduction for Students and Health Professionals
Penny Margaret Webb
University of Queensland
Christopher James Bain
University of Queensland
and Sandi Lynn Pirozzo
University of Queensland

This is an accessible, easily readable, and thoroughly modern introduction to epidemiology for students of medicine and public health. It combines a strong public health perspective and rationale with modern methodological insights in a coherent and accessible way. It emphasises the fundamental principles common to all areas of epidemiology and thus, unlike many other texts, integrates both public health and clinical epidemiology and the study of infectious and chronic diseases. It aims to give health professionals a good understanding of the methods and potential problems underlying epidemiological data and reports but also provides a thorough introduction for would-be epidemiologists. The ‘nuts and bolts’ of epidemiology are embedded in the wider health perspective and the concluding chapter looks at integrating data across the life-course and across exposure levels from micro (molecular/genetic) to macro (ecological/societal). The basic messages are reinforced through numerous examples and questions, with answers provided.

• Holistic approach that integrates many aspects of epidemiology that are often seen as separate (infectious/non-infectious, public health/clinical)

TEXTBOOK
Statistical Modeling for Biomedical Researchers
A Simple Introduction to the Analysis of Complex Data
William D. Dupont
Vanderbilt University, Tennessee

This text will enable biomedical researchers to use several advanced statistical methods that have proven valuable in medical research. The emphasis is on understanding the assumptions underlying each method, using exploratory techniques to determine the most appropriate method, and presenting results in a way that will be readily understood.

‘I highly recommend Statistical Modeling for Biomedical Researchers: A Simple Introduction to the Analysis of Complex Data. I believe that it will be much appreciated by biomedical researchers who are eager to learn more about statistical modeling. I also believe that biostatisticians will enjoy using this book for teaching and consulting purposes.’

TEXTBOOK
Epidemiological Studies
A Practical Guide
Second edition
Alan J. Silman
University of Manchester
and Gary J. Macfarlane
University of Manchester

This new edition explains the principles and practice of epidemiology. Using relevant exercises and examples, taken from real life, it illustrates how to set up a study; it serves to produce valid results that will satisfy grant bodies and journal editors; ultimately it bridges the gap between theory and practice.

Review of first edition
‘… lucid explanations and succinct, well-chosen examples … make the book a rapid read … Readers who follow his guidance will indeed learn painlessly to do epidemiology.’

Systematic Reviews in Health Care
A Practical Guide
Paul Glasziou
University of Oxford
Les Irwig
University of Sydney
Chris Bain
University of Queensland
and Graham Colditz
Harvard School of Public Health

This practical guide to systematic reviews clearly describes and explains the methods to systematically identify relevant research, appraise its quality, and synthesize the results. As well as illustrative examples, there are exercises for each of the sections. This is essential reading for those interested in synthesizing health care research.

‘… the book serves as an excellently readable introduction to the whole subject of literature reviewing … Systematic Reviews in Health Care provides a readable, concise description of the methodologies, limitations and strengths of systematic reviews without excessive detail but greater depth than standard How to do EBM texts.’

Decision Making in Health and Medicine
Integrating Evidence and Values
Myriam Hunink
Agency for Healthcare Research and Quality Research
Paul Glasziou
University of Oxford
Joanna Siegel
Center for Outcomes and Effectiveness Research, Agency for Healthcare Research and Quality
Jane Weeks
Dana-Farber Cancer Institute and Harvard Medical School
Joseph Pliskin
Ben-Gurion University of the Negev and Harvard School of Public Health
and Arthur Elstein
University of Illinois, Urbana-Champaign

Decision making in health care involves navigating through a complex and tangled web of diagnostic and therapeutic uncertainties, patient preferences and values, and costs. This textbook plots a clear course through these conflicting variables and is designed for trainees and for students studying clinical decision analysis, evidence-based medicine, and clinical epidemiology.

‘This is an impressively comprehensive approach to clinical decision-making with every angle considered, advantages and disadvantages tabulated ... there is a great deal of knowledge and information in these chapters, presented with masses of detailed mathematical and statistical analysis.’
Journal of the Royal Society of Medicine

Dicing with Death
Chance, Risk and Health
Stephen Senn
University College London

Stephen Senn explains here how statistics determines many decisions about medical care, from allocating resources for health, to determining which drugs to license, to cause-and-effect in relation to disease. He shows why reasoning with probability is essential to making rational decisions in medicine.

‘... thought provoking and rewarding ... whether your taste is for the nitty-gritty of controversies, like the alleged link between childhood MMR vaccination and autism, or for pensive reflection on the philosophy of knowledge, you will find much of value here.’
New Scientist

Epidemiology and Infection
Editor: Norman Noah
London School of Hygiene and Tropical Medicine

The longest established journal in the field of microbiology, Epidemiology and Infection is an international journal which publishes original reports and reviews on all aspects of infection in man and animals. Particular emphasis is given to the epidemiology, prevention and control of infectious diseases, but the field covered is broad and includes microbiology, virology, immunology, tropical infections, food hygiene, statistics and the clinical, social and public health aspects of disease. Papers cover both the medical and veterinary fields worldwide.

Parasitology
Editors: C. Arne
Keele University
and R. S. Phillips
University of Glasgow

Parasitology is an important specialist journal covering the latest advances in the subject. It publishes original papers on all aspects of parasitology and host-parasite relationships, ranging from the latest discoveries in biochemical and molecular biology to ecology and epidemiology in the context of the medical, veterinary and biological sciences. Each year, the proceedings of the symposia of the British Society for Parasitology are published as a supplement.

Expert Reviews in Molecular Medicine
http://www.expertreviews.org
Editor: Louise Walsh
Centre for Applied Research in Educational Technologies, Cambridge

Published in association with the Centre for Applied Research in Educational Technologies (CARET)

Expert Reviews in Molecular Medicine is an exciting online journal featuring high-quality reviews of the latest developments in this fast-growing field. Coverage includes gene therapy, drug design, vaccines, genetic testing, pathogenesis, epidemiology, genomics, diagnostics and techniques. Reviews are published continually on the website. The journal’s innovative functionality allows viewers to access not only the review articles, but also fully abstracted references, figures, photographs, tables, animations and molecular models. It also hosts pages of relevant links to other websites and a glossary. Expert Reviews in Molecular Medicine will be
of interest to biomedical researchers, clinicians, students and researchers in the pharmaceutical and biotechnology industries. Access to articles published from 1999 – 2002 (Vols 1–4) is free; go to www.expertreviews.org to view them. Access to articles published from 2003 is by purchase/subscription.

Apoptosis in Health and Disease
Clinical and Therapeutic Aspects
Edited by Martin Holcik
University of Ottawa
Eric C. LaCasse
University of Ottawa
Alex E. MacKenzie
University of Ottawa
and Robert G. Korneluk
University of Ottawa

Programmed cell death or apoptosis is centrally involved in the pathogenesis of many significant human illnesses and injury states, including cancer, autoimmune disease, psoriasis, endometriosis, and other degenerative conditions. This book surveys the underlying molecular mechanisms of apoptosis, investigates its role in degenerative and other diseases, and evaluates potential therapies.

Essential Evidence-Based Medicine
Dan Mayer
Albany Medical College, New York

Evidence Based Medicine (EBM), using the best evidence in the literature for the best care for an individual patient, sounds very simple. Yet, most medical students and physicians do not have the mathematical background or training to critically evaluate published research. This ‘users guide’ to EBM helps you become a more discriminating reader of the medical literature, and better equipped to apply EBM in practice. This is an ideal introductory text for medical students and all health-care professionals.

• Accompanied by an interactive and fun-to-use CD-ROM consisting of practice problems and journal articles that reinforce the concepts taught in the book
• Also includes advanced topics in medical decision-making to help practitioners who may understand basic concepts of critical appraisal but would like to have more information about tying them together in the medical decision-making process

‘... highly accurate, and easy to read textbook about EBM, suitable for all lifelong learners of medicine. Modestly titled ‘Essential,’ it contains much more than the essentials. It contains—and conveys—true understanding.’

**Who Wants to be a Scientist?**  
Choosing Science as a Career  
Nancy Rothwell  
University of Manchester

Illustrated by Smudge

Scientific research is about discovering new things and applying them to improvements in life style for people and animals. Careers in science are now very demanding, requiring much more than a keen scientific mind and practical ability. This book offers practical advice on how to choose science as a career.

‘Nancy Rothwell has produced an accessible and excellently written book that covers just about everything you need to know about a career in science. … I wish I could write as well as she does. I wish I’d had this book when I started out as a research student all those years ago.’

Communication in Medical Care
Interaction Between Primary Care Physicians and Patients
Edited by John Heritage
University of California, Los Angeles
and Douglas W. Maynard
University of Wisconsin, Madison
In this new and pathbreaking volume, a team of leading contributors from the fields of linguistics, sociology and medicine examine how doctors and patients communicate in primary care consultations. Clear, informative and comprehensive, it will be essential reading for students and researchers in sociolinguistics, communication studies, sociology, and medicine.

Dependence and Autonomy in Old Age
An Ethical Framework for Long-term Care
George Agich
Department of Bioethics, Cleveland Clinic Foundation

In this influential book, George Agich abandons comfortable abstractions to reveal the concrete threats to personal autonomy in long-term care. His book therefore offers a framework for carers to develop an ethic of long-term care within the complex environment in which many dependent and aged people find themselves.

‘This book has been hailed by critics as a milestone in medical ethics ... It challenges clinicians to reexamine many of the ethical principles on which they have based their interactions with patients in long-term care.’

Falls in Older People
Risk Factors and Strategies for Prevention
Stephen R. Lord
Prince of Wales Medical Research Institute, Sydney
Catherine Sherrington
Prince of Wales Medical Research Institute, Sydney
and Hylton B. Menz
Prince of Wales Medical Research Institute, Sydney

This book provides a survey of the most recent developments in the area. Coverage includes epidemiology, critical appraisal of the roles of exercise, environment, footwear, and medication, evidence-based risk assessment, and falls-prevention strategies. Falls in Older People will be invaluable to clinicians, physiotherapists, occupational therapists, nurses, and researchers.

‘I have nothing but praise for this monograph. The Australian authors – a physiologist, a physiotherapist and a lecturer in foot mechanics and gerontology – recognized that textbooks have dealt with falls superficially and that no-one had methodically analysed and interpreted the published work. They write elegantly and apply academic rigour to the data, highlighting the gaps and uncertainties in our knowledge and generously providing many research ideas for readers to pursue.’

Journals

Ageing & Society
Editor: Tony Warnes
University of Sheffield

The Journal of The Centre for Policy on Ageing and The British Society of Gerontology
Ageing & Society is an interdisciplinary and international journal devoted to publishing papers which further the understanding of human ageing in the wider social and cultural context. It draws contributions and readers from a broad spectrum of subject areas. In addition to original articles, Ageing & Society features an extensive book review section and a regular updating on specified research areas. There are occasional review symposia and special issues on important topics.
Hematology and Oncology

Myelodysplastic Syndromes
From Biology to the Clinic
Peter L. Greenberg

Written by leading international specialists in the field, this book describes the major insights into the clinical classification, underlying biological mechanisms and treatment of the myelodysplastic syndromes.

Hematological Complications in Obstetrics, Pregnancy, and Gynecology
Edited by Rodger L. Bick
University of Texas Southwestern Medical Center, Dallas
Carolyn B. Coulam
Eugene P. Frenkel
University of Texas Southwestern Medical Center, Dallas
William F. Baker and Ravi Sarode
University of Texas Southwestern Medical Center, Dallas

This textbook describes the hematological complications of Obstetrics, Pregnancy and Gynecology. The etiology, pathophysiology, clinical and laboratory diagnosis and management are discussed for all disorders. The book is written by well-recognized experts in each area covered.

Neonatal Hematology
Edited by Pedro de Alarcón
University of Tennessee
and Eric Werner
Eastern Virginia Medical School
Foreword by J. Lawrence Naiman
Stanford University School of Medicine, California

Written by practising physicians specializing in pediatric hematology, neonatology, immunology, pediatric infectious disease and transfusion medicine, this is a practical guide to the pathogenesis, recognition and management of hematologic problems in the neonate. The focus is on clinical issues and there are chapters devoted to disorders of leukocytes, platelets, procoagulant and anticoagulant proteins, and disorders of red blood cells. Neonatal transfusion, malignant disorders in the newborn, neonatal hemoglobinopathy screening, harvesting and storage of umbilical cord stem cells are also covered, and practical approaches to diagnosis and treatment given.

International Psychogeriatrics
Editor-in-Chief: David Ames
University of Melbourne

Published for the International Psychogeriatric Association
International Psychogeriatrics is the official journal of the International Psychogeriatric Association. A well-respected, multidisciplinary journal, International Psychogeriatrics offers high quality original research papers in the field of psychogeriatrics. The journal aims to be the leading peer reviewed journal dealing with the mental health of older people throughout the world in all its aspects. With circulation to over 1400 members of the International Psychogeriatric Association's current impact factor is 0.910. Published quarterly, International Psychogeriatrics also features important editorials, commentaries, book reviews and letters to the editors.

Childhood Leukemias
Second edition
Edited by Ching-Hon Pui
St. Jude Children’s Research Hospital, Memphis
Childhood leukemias represent nearly one third of all cancers in children and present a unique challenge to oncologists, pediatricians, hematologists, and other health professionals. Dr Ching-Hon Pui has assembled an expert team of authors to develop the most comprehensive, clinically-oriented, and authoritative reference dedicated to these diseases. Childhood Leukemias moves from the laboratory bench to the patient bedside in four easily-accessible sections.

Histiocytic Disorders of Children and Adults
Basic Science, Clinical Features and Therapy
Edited by Sheila Weitzman
University of Toronto
and Maarten Egeler
Rijksuniversiteit Leiden, The Netherlands
As the first comprehensive reference on all aspects of the histiocytic disorders, *Histiocytic Disorders of Children and Adults* stands out as the definitive text on the genetics, pathophysiology and clinical management of this wide range of diseases.

Medical Therapy of Breast Cancer
Edited by Zenon Rayter
Bristol Royal Infirmary
and Janine Mansi
St George’s Hospital Medical School, University of London
The volume spans prevention, screening, genetics, and treatment of pre-invasive breast cancer, before focusing in depth on modern management of established breast cancer. This includes chapters on the various therapeutic options available and their role in treating breast cancer at different stages. It concludes with a chapter on palliative care.

Common Breast Lesions
A Photographic Guide to Diagnosis and Treatment
Edited by Samuel Pilnik
Lenox Hill Hospital, New York
This color atlas provides a step-by-step guide to the differential diagnosis and treatment of benign and malignant common breast diseases. Clinicians will find this an invaluable multidisciplinary guide to the most common cancer affecting women and to the respective roles of the clinician, radiologist, pathologist, and surgeon in its treatment.

Familial Breast and Ovarian Cancer
Genetics, Screening and Management
Edited by Patrick J. Morrison
Belfast City Hospital, Belfast
Shirley V. Hodgson
Guy’s Hospital, London
and Neva E. Haites
University of Aberdeen
This publication surveys the profound and far-reaching ramifications that have arisen from advances in cancer genetics. Written by international experts from Europe and North America, this book provides the busy clinician with a contemporary and wide-ranging guide to the latest developments in the diagnosis, genetics, screening, prevention and management of familial breast cancer.

Outcomes Assessment in Cancer
Measures, Methods and Applications
Edited by Joseph Lipscomb
National Cancer Institute, Bethesda, Maryland
Carolyn C. Gotay
National Cancer Institute, Bethesda, Maryland
and Claire Snyder
National Cancer Institute, Bethesda, Maryland
Cancer has profound effects on patients and families, but measuring outcomes such as quality of life poses unique challenges. This book provides perspectives on the state of cancer outcomes measurement and offers a penetrating discussion on a topic critically important to evaluating and enhancing the quality of cancer care.

Platelets in Thrombotic and Non-thrombotic Disorders

Pathophysiology, Pharmacology and Therapeutics
Edited by Paolo Gresele
Università degli Studi di Perugia, Italy
Clive P. Page
Sackler Institute of Pulmonary Pharmacology and Therapeutics, Guy’s, King’s and St Thomas’ School of Biomedical Sciences, London
Valentin Fuster
Mount Sinai Medical Center and School of Medicine, New York
and Jos Vermijlen
Universiteitsbibliotheek-K.U., Leuven

A detailed, up-to-date, highly referenced text for clinical scientists and physicians, including recent developments in this rapidly expanding field. It will be an essential reference for biomedical scientists and clinicians in hematology, vascular medicine, cardiology, thrombosis and related disciplines.

‘… a comprehensive, detailed, up-to-date text for clinicians and basic scientists … A large group of leading experts, both basic scientists and clinical opinion leaders, have contributed to the book, giving a very international and interdisciplinary texture to this text. Comprehensive tables, schemes, some very nice color micrographs render the book easy to read and extensive and updated bibliographic citations may make the book a ready source of landmark references … any scientist interested in this subject will enjoy the educational journey through platelets this book offers; it is obligatory reading for anyone who wishes to embark on platelet studies.’

Journal of Thrombosis and Haemostasis

Understanding Cancer
From Basic Science to Clinical Practice
Malcolm Alison
Royal Postgraduate Medical School, London
and Katherine Sarraf
Royal Postgraduate Medical School, London

This informative and fully illustrated new textbook covers all aspects of cancer biology, from the cellular processes underlying tumorigenesis, all the way through to the development of new agents and strategies to improve cancer treatment and prevention. It provides a clear and concise introductory account which will be ideal for students of medicine and biology.

‘… this is a useful book. It will be used by students of clinical and medical oncology as scientific background’.

Cytometric Analysis of Cell Phenotype and Function

Edited by Desmond A. McCarthy
Queen Mary, University of London
and Marion G. Macey
The Royal London Hospital, London

A comprehensive introduction to the theory and clinical applications of flow cytometry and laser scanning cytometry in the assessment of cell phenotype and function. All chapters contain detailed protocols from leading authorities with extensive practical experience. This is an essential handbook and reference for clinicians and biomedical research scientists.

‘… an up-to-date book that is useful for everybody working in the cytometry field, as well as for those with a more general interest in biomedical sciences.’

Rafael Nunez, Nature Cell Biology
— 2001 246 x 189 mm 430pp

Living and Dying with Cancer
Angela Armstrong-Coster
University of Southampton

Through a series of individual narratives, this book explores the impact of being diagnosed with cancer on those with the disease and the people around them. An invaluable resource for social scientists, health professionals and those coming to terms with the impact of cancer on their own lives.

‘… allows us a glimpse of some of the most personal and sensitive issues … there are important messages for those who work in medical oncology and palliative care …’The value of this book is in what the patients have to say. Anyone who works in palliative care will benefit from listening to them and it should be required reading for anyone training in medical or radiation oncology.’

Drug Resistance in Cancer
Mechanisms and Models
James H. Goldie
University of British Columbia, Vancouver
and Andrew J. Coldman
University of British Columbia, Vancouver

Provides an accessible yet sophisticated account of the mechanisms responsible for drug resistance in cancer. In addition, the authors use clearly explained mathematical models to provide an insight into tumour development and the effectiveness and limitations of drug treatment.
This volume provides a very good overview of the drug resistance field with special emphasis on mathematical models and can be recommended to everyone interested in the field.

**Infectious Diseases**

**Hospital Infection: From Miasmas to MRSA**

Graham A. J. Ayliffe
University of Birmingham
and Mary P. English
United Bristol Hospitals Trust

This is an absorbing account of the continuing battle to control hospital infections, from the earliest days of hospital care when bad air or miasma was thought to be the cause, to the present day and the emergence of antibiotic-resistant ‘superbugs’ such as MRSA and necrotizing fasciitis.

‘This is valuable reading for anyone who wants to know more about the current state of things and how we got here …’.

_Health Service Journal_

---

**Manual of Infection Control Procedures**

Second edition

N. N. Damani
The Queen’s University of Belfast

Foreword by A. M. Emmerson
Queen’s Medical Centre, Nottingham

The new, updated and significantly expanded edition of the *Manual of Infection Control Procedures* provides a comprehensive overview of the main aspects of infection control, and gives practical, evidence-based recommendations and easy-to-follow advice on strategies to prevent infection in all care facilities.

---

**TEXTBOOK**

**Microbial Inhabitants of Humans**

Their Ecology and Role in Health and Disease

Michael Wilson
University College London

The microbes that live on humans are discussed in this textbook for advanced students. It explains how these indigenous microorganisms come to be on our body and how they can survive there. The benefits of these organisms to humans are discussed along with the diseases that they can cause.

---

**The Moral Economy of AIDS in South Africa**

Nicoli Nattrass
University of Cape Town

Relatively few people have access to antiretroviral treatment in South Africa. The government justifies this on grounds of affordability, a view that Nicoli Nattrass argues is insulating AIDS policy from social discussion and the possibilities of financing a large scale intervention.

---

**HIV/AIDS in South Africa**

Edited by Salim Abdool Karim
University of Natal, South Africa

and Quarraisha Abdool Karim
University of Natal, South Africa

This definitive textbook was written by a highly-respected team of southern African HIV experts and provides a thoroughly researched account of the epidemic in the region. It covers the numbers, the science, risk factors, prevention strategies, impact, politics and the future of AIDS in South Africa.

---

**AIDS and HIV in Perspective**

A Guide to Understanding the Virus and its Consequences

Second edition

Barry D. Schoub
National Institute of Virology

A new edition of Dr Schoub’s popular and informative account brings the reader up to date on our current understanding and management of HIV and AIDS. Aimed at the general reader it is adeptly illustrated and bridges the gap between specialist science literature and basic public educational material.

---

**Bacterial Invasion of Host Cells**

Edited by Richard J. Lamont
University of Florida

This book addresses an aspect of the processes by which bacteria can cause disease. Specifically, the ability of certain bacteria to gain entry within host cells is described. It is important to understand these invasion mechanisms in order to fully understand the disease process. Specific examples of invasive bacteria are discussed in detail.

Susceptibility to Infectious Diseases
The Importance of Host Genetics
Edited by Richard Bellamy
Kintampo Health Research Centre, Ghana
Extensive evidence has now accumulated that host genes are important determinants of the outcome of infection for many common pathogens. This book, written by leading authorities, summarises the advances which have been made in understanding the complexity of host genetic susceptibility. Advances in Molecular and Cellular Microbiology, 4
– 2004 228 x 152 mm 422pp

Bacterial Protein Toxins
Role in the Interference with Cell Growth Regulation
Edited by Alistair J. Lax
King’s College London
Bacterial toxins are potent molecular poisons that are released by bacteria to cause disease. This book describes how toxins can enter cells to subvert cell function by interfering with the key processes involved in cell growth and division, and the ability of cells to differentiate into specialised cells. Advances in Molecular and Cellular Microbiology, 7
– 2005 228 x 152 mm 254pp

Congenital and Perinatal Infections
Prevention, Diagnosis and Treatment
Marie-Louise Newell
Institute of Child Health, University College London
and James McIntyre
University of the Witwatersrand, Johannesburg
This concise and accessible account provides an essential guide to the diagnosis, management and prevention of perinatal infections. An international team of experts have striven to make this an account suitable for all doctors and allied health professionals around the world charged with the care of the mother and newborn.
‘Newell and McIntyre provide a world-view of their subject with contributions from the UK, North and South America, South Africa and continental Europe … Congenital and Perinatal Infections manages to combine the roles of comprehensive textbook and rapid reference-source … this is a very affordable book and I would say, read it now.’

Journal
Biofilms
Editor-in-Chief: Michael Wilson
University College London
Biofilms are increasingly being recognised as the preferred mode of growth of microbes in a wide range of habitats. Biofilms have a large and varied role in human activities from being responsible for a number of diseases in humans and animals to also being invaluable in the treatment of domestic sewage and industrial wastes. Biofilms aims to be the most important forum for the publication of articles on biofilms and the journal of choice for researchers in the biofilm field.
Published quarterly, Biofilms, contains original research articles and review articles covering the structure, formation and growth of biofilms, gene expression and transfer in biofilms, human and animal diseases involving biofilms, biofilms in the food, oil and pharmaceutical industries, biofilms associated with soil, water, waste treatment, corrosion and marine environments. It also publishes reviews of books and internet sites and will contain announcements of interest to the biofilm community.

Management of the Motor Disorders of Children with Cerebral Palsy
Second edition
Edited by David Scrutton
Institute of Child Health, University College London
Diane Damiano
University of Washington
and Margaret Mayston
University College London
This entirely rewritten new edition, with two new editors from America and Australia, describes the most up-to-date thinking on the treatment of cerebral palsy. Coverage includes the types of cerebral palsy; assessment; goal-setting; learning and neural plasticity; mechanisms of deformity, its prevention and treatment, and the transition to adult life.
‘... this will be an essential book for all those who are managing the health and development of these children.’
New Medical World Weekly

Gross Motor Function Measure (GMFM) Self-Instructional Training CD-ROM
Mary Lane
CanChild Centre of Childhood Disability Research, Hamilton
and Dianne Russell
McMaster University, Ontario
These CD-ROMs enable practitioners to train independently as reliable users of the printed Gross Motor Function Measure (GMFM). They include scoring details of all 88 items in the GMFM, as well as several video examples for each chosen to reflect a variety of scores and to highlight significant training principles.

Dianne J. Russell
McMaster University, Ontario
Peter L. Rosenbaum
McMaster University, Ontario
Lisa M. Avery
CanChild Centre of Childhood Disability Research, Hamilton
and Mary Lane
CanChild Centre of Childhood Disability Research, Hamilton
This new version of The Gross Motor Function Measure (GMFM-66) is designed to evaluate the gross motor abilities of children with cerebral palsy. It is completely revised and improved and includes a user-friendly, software program to aid in scoring and interpretation supplied on a CD-ROM.
‘This is a hands-on, practically orientated book. It is easy to read, and clearly written, with precise descriptions and with well-structured page layout.’
European Journal of Paediatric Neurology

Cerebral Palsies
Epidemiology and Causal Pathways
Fiona J. Stanley
TVW Telethon Institute for Child Health Research
Eve Blair
TVW Telethon Institute for Child Health Research
and Eva Alberman
St Bartholomew’s Hospital
This totally new clinical text gives:
• Guidance on how best to study causes
• An account and analysis of international research
• Methods of collection and analysis of data
• A review of all published data
• New ways of thinking about causal pathways in the cerebral palsies
• Possible new prevention pathways
• A guide to systematic management

Hip Disorders in Childhood
Edited by John V. Banta
Connecticut Children’s Medical Center
and David Scrutton
University College London
This book brings together expert discussions of the aetiology, presentation, diagnosis, treatment and the range of outcomes of hip disorders in children. It is written primarily for paediatricians, physiotherapists, occupational therapists, nurses and orthotists to provide what every clinician should know about the developing hip joint.
‘The book is very relevant to physiotherapists working in the varied field of paediatrics and provides a useful resource and collates information that previously may have only been found in several different texts.’
Psychotherapy Journal

Movement Disorders in Children
Emilio Fernandez-Alvarez
Universitat de Barcelona
and Jean Aicardi
Hôpital Robert Debré, Paris

This book brings the combined expertise of two world-known authorities to the systematic and practical study of movement disorders in childhood. Clinical in emphasis, the authors cover all the diseases, including the less well-known conditions. For the first time all the available information has been brought together in one volume.

‘There is still much to be learnt in the field of paediatric movement disorder, and much to be recorded in future texts in the area. One can only hope that they will be as intelligently written as this pioneering work.’

The Clinical Management of Craniosynostosis
Edited by Richard Hayward
Great Ormond Street Hospital for Children, London
Barry Jones
Great Ormond Street Hospital for Children, London
David Dunaway
Great Ormond Street Hospital for Children, London
and Robert Evans
Great Ormond Street Hospital for Children, London

Children with craniosynostosis are born with congenital deformities of the face and skull. In severe cases associated problems are common: blindness, deafness, severe learning difficulties and facial deformities. In this book, experts in the field introduce the non-craniofacial specialist to how they can contribute to the child’s welfare.

Tuberous Sclerosis Complex
From Basic Science to Clinical Phenotypes
Edited by Paolo Curatolo
Università degli Studi di Roma ‘Tor Vergata’

‘This is clearly the most authoritative and contemporary statement of current knowledge yet published.’ from the Foreword by H. Sarnat
Tuberous sclerosis complex presents with seizures, cognitive impairments and autism. This up-to-the-minute book enables the paediatrician to recognise, understand and treat the disease most effectively.

‘The previous giant of tuberous sclerosis was Manuel Gomez of the Mayo Clinic. The present giant is surely Paolo Curatolo. Others will surely stand on his shoulders, some of whom may have their enthusiasm first lit by reading this book. Pediatric neurologists, make sure you have it.’

Disorders of Neuronal Migration
Edited by Peter G. Barth
Universiteit van Amsterdam

Disorders of neuronal migration are causes of mental handicap, autism, and epilepsy. Many are genetically determined and need precise diagnosis to provide genetic counselling. This book will help the clinician acquire insight as well as proficiency in diagnosis. Individual chapters describe subgroups and multisystem disorders, and neuroanatomical and genetic data.

FORTHCOMING

Stroke and Cerebrovascular Disease in Childhood
Edited by Vijeya Ganesan
Institute of Child Health, University College London
and Fenella Kirkham
Institute of Child Health, University College London and Great Ormond Street Hospital, London

In this book an international team of experts provide an up-to-the-minute account of stroke and cerebrovascular disease in children, ranging from a historical perspective to future directions, through epidemiology, neuroimaging, neurodevelopment, co-morbidities, diagnosis and treatment. Their practical approach to the clinical problems makes this essential reading for practising clinicians.

Communicating without Speech
Practical Augmentative and Alternative Communication for Children
Helen Cockerill
Guy’s Hospital, London
and Lesley Carroll-Few
Chelsea and Westminster Hospital, London

‘This book is full of useful information which must surely be of value to anyone, whatever their discipline, who is trying to help children with difficulties of communication. It also has lessons to teach all those involved with disabled children with its philosophy of doing everything possible to compensate for skills that are lacking.’
European Journal of Paediatric Neurology

The Neurological Assessment of the Preterm and Full-term Newborn Infant
Second edition
Lilly M. S. Dubowitz
Hammersmith Hospital
Victor Dubowitz
Hammersmith Hospital
and Eugenio Mercuri
Hammersmith Hospital

‘Every physician who cares for newborn babies has long been awaiting the release of the second edition of this book which has become on of the standard medical assessments of newborn babies all over the globe. This book has already become an essential reference for every neonatal unit, and again, I strongly recommend it to those health care providers who care for newborn babies.’

A Neurodevelopmental Approach to Specific Learning Disorders
Edited by Kingsley Whitmore
Chelsea and Westminster Hospital, London
Hilary Hart
Mac Keith Press
and Guy Willems
Saint-Luc University Hospital, Belgium
Foreword by Brian Neville
A practical guide to common learning disorders detailing causation, epidemiology, and essential preventive and management information.

Behavioral Phenotypes in Clinical Practice
Edited by Gregory O’Brien
University of Northumbria, Newcastle

It is increasingly thought that the behaviours of young people with intellectual disabilities are shaped by the respective causal syndrome. In this book an international team of experts provides a practical resource for interventions and ongoing care programmes to address this within the context of coordinated multimodal case planning.

Vitamin Responsive Conditions in Paediatric Neurology
Edited by Peter Baxter
University of Sheffield

This book, the latest in the International Child Neurology Review series, is the first authoritative synthesis of the role of vitamin treatments in children with neurological disorders. In it an international team of experts draws clinical, research and previously unpublished findings into one source.

International Review of Child Neurology (Mac Keith Press)

Childhood Headache
Edited by Ishaq Abu-Arafeh
Stirling Royal Infirmary
Ishaq Abu-Arafeh leads an international team of experts in the headache area to provide an extensive and detailed review of the recent findings in childhood headache. This book, with its evidence-based plans for management and guidelines for investigations, will be essential reading for all clinicians treating headache in children.

‘The chapter on chronic daily headache, a fairly new diagnosis and probably a variant of migraine, will be especially helpful to those who advise on this troublesome syndrome although no less useful are the chapters relating to migraine.’

An Atlas of Neonatal Brain Sonography
Paul Govaert
Gent University Hospital
and Linda S. de Vries
Wilhelmina Kinderziekenhuis

‘There can be little doubt that this title represents the definitive work on neonatal cranial ultrasound.’

Hilary Hart
Mac Keith Press
and Guy Willems
Saint-Luc University Hospital, Belgium
Foreword by Brian Neville
A practical guide to common learning disorders detailing causation, epidemiology, and essential preventive and management information.
Developmental Medicine and Child Neurology
Editor: Peter Baxter
MacKeith Press, London
Distributed for Mac Keith Press
Developmental Medicine and Child Neurology (DMCN) is one of the world’s leading journals on paediatric neurology, and one of the leaders in the whole field of paediatrics. In 2005 there will be twelve issues as usual, plus at least four supplements. DMCN is the officially designated journal of the British Paediatric Neurology Association and the American Academy for Cerebral Palsy and Developmental Medicine. It covers a wide range of clinical topics concerning the neurological diseases and disabilities of children. The journal is of interest both to specialists engaged in medical research and toclinicians in the fields of paediatrics, genetics, orthopaedics, neurology and other relevant areas. It features original articles, case reports, annotations, letters to the editor, and book reviews.

Medical Ethics

Cases in Medical Ethics and Law
An Interactive Tutorial
David Lloyd
King’s College London
Heather Widdows
University of Birmingham
and Donna Dickenson
Birkbeck College, University of London
This is a fully interactive, problem-based-learning tutorial covering the complex legal and ethical issues raised by six medical case scenarios covering reproductive technology, consent, genetic screening, participation in research trials, paternity and confidentiality. Each is presented with drop-down menus, notebooks, required response boxes, audio and video clips, and a glossary.

Case Analysis in Clinical Ethics
Edited by Richard Ashcroft
Imperial College of Science, Technology and Medicine, London
Anneke Lucassen
University of Southampton
Michael Parker
University of Oxford
Marian Verkerk
Rijksuniversiteit Groningen, The Netherlands
and Guy Widdershoven
Universiteit Maastricht, Netherlands
This book surveys the main methods of analysing ethical problems in modern medicine. The authors present a challenging genetics case and analyse it from different theoretical view points. Each presents one approach, giving a sense of how far different theoretical starting points and methodologies can lead to different practical conclusions.

Preventing Intellectual Disability
Ethical and Clinical Issues
Pekka Louhiala
University of Helsinki
In this book Pekka Louhiala, a paediatrician and a philosopher, covers comprehensively the ethical issues involved in prevention of intellectual disability (ID). These are discussed around four real cases and cover the definition of ID, epidemiology, screening, genetic counselling and the question of whether or not ID should be prevented.

Manual for Research Ethics Committees
Centre of Medical Law and Ethics, King’s College London
Sixth edition
Edited by Sue Eckstein
King’s College London
This new edition is a unique, single-volume compilation of the key legal and ethical guidelines with chapters on major topics in bioethics specially written by leading experts. There are fifteen new chapters covering key issues from participation in clinical trials to cloning.
‘… a timely and important publication that should be an invaluable aid for applied psychologists, or anyone planning joint research with the NHS … any researcher or member of an ethics committee will find plenty of interest.’
The Psychologist
— 2003 276 x 219 mm 578pp 3 half-tones 16 tables 17 figures

Euthanasia, Ethics and Public Policy
An Argument Against Legalisation
John Keown
University of Cambridge
How cogent is the ‘slippery slope’ objection to the issue of whether voluntary euthanasia is permissible? Is it reasonable to argue that patients who did not make a free and informed request would be killed? This lucid introduction to this question will interest all on both sides of the debate.

‘… undoubtedly one of the most comprehensive critiques of euthanasia and, serves as a necessary counterbalance to the growing number of pro-euthanasia contributions.… Lawyers and non-lawyers alike with an interest in end-of-life issues will therefore find this a stimulating addition to their undoubtedly well-stocked libraries.’
New Law Journal

The Medico-Legal Back: An Illustrated Guide
Robert A. Dickson
St James’s University Hospital, Leeds
and W. Paul Butt
St James’s University Hospital, Leeds
Back pain and back injury is an extremely common problem, producing chronic, debilitating symptoms for sufferers, and resulting in millions of pounds of lost revenue in absence from work and paid in compensation for spinal injuries. The Medico-Legal Back address all aspects of the problem for a legal readership, in a clear, concise and reader-friendly style.

From Chance to Choice
Genetics and Justice
Allen Buchanan
University of Arizona
Dan W. Brock
Brown University, Rhode Island
Norman Daniels
Tufts University, Massachusetts
and Daniel Wikler
University of Wisconsin, Madison
This book is the first systematic treatment of the fundamental ethical issues underlying the application of genetic technologies to human beings. The authors probe the implications of genetic advances for our understanding of distributive justice, and the role of the concept of human nature in ethical theory and practice.

— 2002 228 x 152 mm 412pp 1 line diagram

Errors, Medicine and the Law
Alan Merry
University of Auckland
and Alexander McCall Smith
University of Edinburgh
Merry and McCall-Smith take a hard look at why people suffer injury in the course of medical treatment. Occasionally, blame may be appropriate, and the book is as much about when to blame, as when not to blame.

‘[A] superb book … Merry and McCall Smith are not simply out to protect doctors: their central thesis is that many ‘negligent’ incidents should not attract blame, but they also support reporting systems because ‘there are too many medical accidents’ … I do know some people who should be forced to read Errors, Medicine and the Law.’

THE CAMBRIDGE MEDICAL ETHICS WORKBOOK
Case Studies, Commentaries and Activities
Michael Parker
University of Oxford
and Donna Dickenson
Imperial College of Science, Technology and Medicine, London
This is a case-based introduction to bioethics designed to examine the major general and specific ethical questions by basing activities around actual cases, commentaries, and short papers provided by international experts. It will be invaluable to anyone who needs to develop skills in ethical analysis for clinical practice or research.

‘It is refreshing to see a book on bioethics that is both comprehensive and easily readable. This is a case-based book packed with high-quality information … clever combination of academic material with practical case studies has resulted in a remarkably powerful and user-friendly book. It will probably succeed in making you at least try to think ethically.’

ETHICS AND EVIDENCE-BASED MEDICINE
Fallibility and Responsibility in Clinical Science
Kenneth W. Goodman
University of Miami
This incisive book reviews the history and conceptual origins of evidence-based practice and discusses key ethical issues that arise in clinical practice, public health and health policy. It is essential reading for all physicians, and practitioners in epidemiology and public health.

‘Goodman’s book is well worth reading by anyone interested in health policy, EBM, and research synthesis. It is lucid and elegantly written.’
The Lancet

— 2002 228 x 152 mm 180pp 1 line diagram

The Ethics of Medical Research on Humans
Claire Foster
Board for Social Responsibility, London

This book examines the three main approaches to moral decision-making and looks at the problematic boundaries where best practice ends and experimentation begins. It provides a thorough, non-partisan grounding in what the ethical principles are and how they can be applied. It will be essential reading for all medical decision-makers.

Double Standards in Medical Research in Developing Countries
Ruth Macklin
Albert Einstein College of Medicine, New York

Examines the ethical controversies that have surrounded the design and conduct of international medical research sponsored by industrialized countries or industry, and carried out in developing countries. This is the first book to examine these issues, drawing

the bold conclusion that double standards in medical research are ethically unacceptable.

‘… a very readable overview and analysis of the main issues in one of the most acrimonious international debates the field of ethics has seen in recent times … As an easily digested overview this book could well become the standard textbook for researchers and students in postgraduate courses in biomedical ethics.’

Ethical Issues in Maternal-Fetal Medicine
Edited by Donna L. Dickenson
University of Birmingham

This book addresses the ethical problems in maternal-fetal medicine which impact directly on clinical practice. It is divided into parts by the stages of pregnancy and looks at issues of power, new technology, ‘designer babies’, and cultural, religious difference. It unites analytic philosophy and actual practice for clinicians.

‘Donna Dickenson has written a skillful overview … a valuable contribution to a continuing discussion.’

Journal of the Royal Society of Medicine

Genes and Insurance
Ethical, Legal and Economic Issues
Marcus Radetzki
Stockholms Universitet

Marian Radetzki
Stockholms Universitet

and Niklas Juth
Göteborgs Universitet, Sweden

The genetic information that is available to insurance companies has often been regulated to avoid certain ethical difficulties. But regulation may not be the solution, argue the authors, and suggest instead the resurrection of collectively funded public insurances. This will interest academic researchers and professionals involved with genetics and insurance.

‘… this timely book, a welcome translation from the Swedish original … This excellent book tells a cautionary tale about the prospects of total and partial regulation …’

The Troubled Helix
Social and Psychological Implications of the New Human Genetics
Edited by Theresa Marteau
United Medical and Dental Schools of Guy’s and St Thomas’s, London

and Martin Richards

This wide ranging and compelling account surveys the exciting opportunities and difficult problems which arise from the new human genetics. This powerful new technology can be used to predict an individual’s susceptibility to diseases with a genetic component, many of which are unfortunately still incurable.

‘… a very timely addition to the publications on human genetics, and medical genetics in particular … all those who are concerned in genetic counselling should read it.’

Management Mistakes in Healthcare
Identification, Correction, and Prevention
Edited by Paul B. Hofmann and Frankie Perry
University of New Mexico
Foreword by Richard J. Davidson
American Hospital Association

This book defines management mistakes and offers a variety of models to classify and interpret them. Six case studies describe management mistakes and are followed by commentaries by experts in the field of healthcare management, indicating steps that might have produced more positive outcomes.

‘This book is a must-read for academics, researchers and health care practitioners. It contains an intriguing blend of facts, theory and practical applications. ‘Covering the waterfront’ is an understatement. I found every chapter to be insightful and instructive.’

International Journal of Technology Assessment in Health Care

Editors: Egon Jonsson
World Health Organization
and Stanley J. Reiser
University of Texas – Houston Health Science Center

Some of the major dilemmas in society today involve the cost of new technologies, the allocation of available resources and the ethical questions raised. The International Journal of Technology Assessment in Health Care serves as a forum for the wide range of professionals interested in the assessment of medical technology, its consequences for patients and its impact on society. It covers the generation, evaluation, diffusion and use of health care technology. In addition to general essays, regular columns on technology assessment reports, announcements, and thematic sections are published.

JOURNAL
emphasis upon articles which seek to contribute to debates on the future direction of social policy, to advance theories or to identify and analyse issues in the making and implementation of social policies. A new online resource, the ‘Social Policy Digest’, was launched in 2004. This is an invaluable, fully-searchable and regularly updated source of information about current events across the whole social policy field. The Digest provides a commentary on changes in social welfare legislation and a review of the major reports and surveys published by government departments, leading think tanks and voluntary bodies. Further enhancements to the resource will be added in 2005, such as full search facilities and a news section.

Journal of Social Policy is part of the ‘Social Policy Package’ — also including Social Policy and Society.

Peter MacCallum Cancer Center
Managing Editor: Donna Cassetta
Memorial Sloan-Kettering Cancer Center

Palliative & Supportive Care focuses on the psychiatric, psychosocial, spiritual, existential, ethical, and philosophical aspects of palliative care. The journal serves as an educational resource for practitioners engaged in the delivery of care to those with life threatening illnesses along the entire continuum of care from diagnosis to the end of life. The mission of Palliative & Supportive Care is to expand the scope of the concept of adequate palliative care beyond pain and physical symptom control, to include the psychiatric, psychosocial, existential and spiritual domains of care.

Health Economics, Policy and Law
Editors: Gregg Bloche
Georgetown University, Washington
William Hsiao
Harvard University, Cambridge MA
Martin Knapp
London School of Economics and Political Science
Elias Mossialos
London School of Economics and Political Science
Adam Oliver
London School of Economics and Political Science
and Thomas Rice
University of California, Los Angeles

International trends highlight the confluence of economics, politics and legal considerations in the health policy process. Health Economics, Policy and Law will serve as a forum for scholarship on health policy issues from these perspectives, and will be of use to academics, policy makers and health care managers and professionals. HEPL will be international in scope, will publish both theoretical and applied work, and will contain articles on all aspects of health policy. Considerable emphasis will be placed on rigorous conceptual development and analysis, and on the presentation of empirical evidence that is relevant to the policy process.

JOURNAL

A-Z of Emergency Radiology
Erskine J. Holmes
Oxford Rotational Training Programme
and Rakesh R. Misra
Wycombe Hospital, Buckinghamshire

A-Z of Emergency Radiology is aimed at trainee and practising radiologists, as well as all other healthcare professionals involved in interpreting scans of all imaging modalities in the emergency room setting. It provides a simple, easily accessible guide to the key aspects of the most commonly encountered problems.

— 2004 234 x 156 mm 178pp

MCQs for the FRCR Part 1
Monica Khanna
Guy’s and St Thomas’ Hospital, London
and Leon Menezes
Guy’s and St Thomas’ Hospital, London

Multiple-choice questions (MCQs) are used by many examination boards as a way of testing a broad spectrum of knowledge in an easily administered and unbiased way. A perfect revision tool for candidates sitting the FRCR Part 1 examination to acquaint themselves with the new IRMER (Ionizing Radiation (Medical Exposure)) regulations.

Medical Imaging

Clinical MR Neuroimaging
Diffusion, Perfusion and Spectroscopy
Edited by Jonathan H. Gillard
University of Cambridge
Adam D. Waldman
Charing Cross Hospital, London
and Peter B. Barker
The Johns Hopkins University

The physiological magnetic resonance techniques of diffusion imaging, perfusion imaging and spectroscopy offer insights into brain structure, function and metabolism. This book provides the reader with a thorough review of the underlying physical principles of each of these methods, as well as comprehensive coverage of their clinical applications. Attention is also drawn to possible artifacts and pitfalls associated with these techniques. This book is an essential reference work for radiologists, neurologists, neurosurgeons and psychiatrists who use these techniques, as well as medical researchers, residents and fellows.

• Comprehensive review of advanced MRI techniques and applications
• Explains clinical applications
• Case reports included throughout the book
  — 2004 276 x 219 mm 852pp 31 tables 333 figures

Interpreting Chest X-Rays
Illustrated with 100 Cases
Philip Eng
and Foong-Koon Cheah

This highly illustrated guide provides the ideal introduction to chest radiology. It uses 100 clinical cases to illuminate a wide range of common medical conditions, each illustrated with a chest X-ray and a clear description of the significant diagnostic features and their clinical relevance.

— 2004 228 x 152 mm 210pp 208 half-tones

MRI from A to Z
A Definitive Guide for Medical Professionals
Gary Liney

From ‘AB systems’ to ‘Zipper artefact’ — even for the experienced practitioner in MRI, the plethora of technical terms and acronyms can be bewildering. More than 800 terms commonly encountered in MR Imaging and Spectroscopy are clearly defined, explained and cross-referenced, and the volume concludes with a useful collection of appendices.

— 2005 123 x 186 mm 270pp 11 line diagrams 21 half-tones

Imaging in SARS
A. T. Ahuja
The Chinese University of Hong Kong
and C. G. C. Ooi
The Chinese University of Hong Kong

This new book aims to be a state-of-the-art update on SARS, with particular reference to imaging, which plays a crucial role in the diagnosis, management and follow-up of patients with the disease. It will also provide a perspective on the treatment and experience of the disease outside Hong Kong.

— 2004 234 x 156 mm 194pp 150 line diagrams
  — 978 1 841 10219 1 (1 841 10219 9)
  Hardback £40.00
The main body of the text provides a comprehensive understanding, with more complex and sophisticated concepts accessible as optional extras in advanced ‘boxes’.

• Informal, readable and informative

'We can find here replies to questions asked often by staff of MRI devices and by physicians referred patients to MR examinations. I am sure that especially radiologists – teachers and other experts lecturing in radiology will be enthusiastic about this outstanding book.'

Introduction to Functional Magnetic Resonance Imaging Principles and Techniques
Richard B. Buxton
University of California, San Diego
Functional Magnetic Resonance Imaging (fMRI) is an important and highly interdisciplinary field involving neuroscientists and physicists as well as clinicians who need to understand the rapidly increasing range, flexibility and sophistication of the techniques. Richard Buxton, a leading authority on fMRI, provides an invaluable, broad introduction for this readership to how fMRI works.

‘… can be highly recommended to clinical researchers and all specialists in the field of functional MRI.’

Abdominal Ultrasound
Mike Stockley
South Bank University, London

Abdominal Ultrasound gives the trainee and practising sonographer, radiologist or clinician a detailed and accessible guide to the techniques and diagnostic applications of ultrasound of this part of the body, with its complex multi-organ systems.

- 2001 246 x 189 mm 298pp
- 250 line diagrams
- 978 1 900 15166 5 (1 900 15166 9)

Atoll of Musculoskeletal Ultrasound Anatomy
Mike Bradley
University of Bristol
and Paul O’Donnell
Royal National Orthopaedic Hospital, Middlesex

This book is aimed at the radiology trainee, the practising radiologist, sonographers and other clinicians in related disciplines such as orthopaedics and sports medicine. It aims to provide the reader with the essential grounding in normal ultrasound anatomy.

- 2002 246 x 189 mm 224pp 75 half-tones
- 978 1 841 10117 1 (1 841 10117 5)

Digital Imaging
A Primer for Radiographers, Radiologists and Health Care Professionals
Edited by Jason Oakley

Digital Radiography Systems is the first book to fill the need of the modern radiographer and radiologist to understand how digital imaging, manipulation and storage systems work on a practical level. It explains the equipment and principles behind computers in radiology, and will serve as an invaluable reference book.

- 2003 246 x 189 mm 248pp
- 978 1 841 10122 6 (1 841 10122 0)

Practical Gynaecological Ultrasound
Second edition
Edited by Jane Bates

This user-friendly book provides a practical introduction to gynaecological ultrasound. Emphasis is placed on how to maximise image quality, and how to recognise normal and pathological features. Illustrated throughout with numerous high-quality ultrasound images and line drawing, this is essential reading for practitioners in training, including radiologists, gynaecologists and sonographers.

- 2005 246 x 189 mm 250pp 7 tables
- 978 1 841 10207 8 (1 841 10207 5)
- Paperback £35.50
- Publication November 2005

Breast Ultrasound: The Essentials
Erika Denton
Norfolk and Norwich Hospital, Norwich
and Mike Stockley
South Bank University, London

This superbly illustrated text begins with an introduction to the equipment used and techniques needed to successfully image breast tissue, and then presents about 60 ‘classic’, fully illustrated cases that might be encountered by the radiologist or sonographer, including a few rarer cases or cases that could easily be misinterpreted.

- 2005 234 x 156 mm 160pp
- 978 1 841 10176 7 (1 841 10176 1)
- Paperback £24.99
- Publication September 2005

Diagnostic Ultrasound Physics and Equipment
Peter Hoskins
University of Edinburgh
Abigail Thrush
The London NHS Trust
Kevin Martin
University Hospitals of Leicester
and Tony Whittingham
Newcastle General Hospital

Aimed primarily at sonographers taking the postgraduate diploma in medical ultrasound, this book provides a concise technical introduction to the subject, without going beyond the level of knowledge required. Fully illustrated throughout, with high-quality halftones and explanatory line diagrams, it covers all aspects of the topic.

- 2002 246 x 189 mm 248pp
- 150 line diagrams 40 half-tones
- 978 1 841 10042 5 (1 841 10042 0)

Practical Radiotherapy Physics and Equipment
Edited by Pam Cerry

An introduction to the physical principles and equipment involved in the production, use and attenuation of radiation.

- 1998 978 1 900 15106 1 (1 900 15106 5)
- Paperback £22.99

QBase Radiology
Volume 1: MCQs for the FRCR
R. R. Misra
St Mary’s Hospital, London
M. C. Uthappa
St Mary’s Hospital, London
P. S. Richards
Royal London Hospital
D. Evans
Royal London Hospital
and O. Chan
Royal London Hospital

The QBase examination software allows the reader to attempt the same exams as printed in the book, but the user can ‘custom-build’ their own exams. They can select their own choice of subjects and number of questions, sit an automatically set exam or a ‘shuffled’ version to avoid pattern recognition.

- 2000 234 x 156 mm 232pp 45 figures
- 978 1 841 10032 6 (1 841 10032 3)
- Mixed Media £24.99

QBase Radiology
Volume 2: MCQs for the FRCR
R. R. Misra
St Mary’s Hospital, London
M. C. Uthappa
St Mary’s Hospital, London
P. S. Richards
Royal London Hospital
D. Evans
Royal London Hospital
and O. Chan
Royal London Hospital

The powerful QBase examination analysis software allows the reader to attempt the same exams as printed in the book, but on screen, realistically replicating the examination situation. The software will automatically mark, analyse and store completed exams for future review and re-sitting.

- 2000 234 x 156 mm 208pp 40 figures
- 978 1 841 10040 4 (1 841 10040 4)
- Mixed Media £24.99
Radiology Made Easy
Arpan K. Banerjee
University of Birmingham

This book adopts a systemic approach to cover the commonest clinical problems that are encountered on the wards, in tutorials and in examinations. Clear radiographs are each presented with brief reports and an accompanying discussion of the diagnosis, differential diagnosis and potential further investigations.

- 1999 234 x 256 mm 162pp
- 150 line diagrams
- 978 1 841 10014 2 (1 841 10014 5) Paperback £22.99

JOURNAL

Journal of Diagnostic Radiography and Imaging
The Journal of Diagnostic Radiography and Imaging is an international peer-reviewed journal covering all of the current modalities used in diagnostic imaging. The Journal aims to publish quality research from a wide range of styles and encourage debate and the exchange of information from within the field of diagnostic medical radiography. The Journal also aims to encourage clinical papers and equipment reviews that will be of interest to an international radiotherapy market.

JOURNAL

Microscopy and Microanalysis
Editor-in-Chief: Charles E. Lyman
Lehigh University

Published for the Microscopy Society of America

Microscopy and Microanalysis, a peer-reviewed bimonthly, publishes original research papers in the fields of microscopy, imaging, and compositional analysis. This distinguished international forum is intended for microscopists in both biology and materials science. The journal provides significant articles that describe new and existing techniques and instrumentation, as well as the applications of these to the imaging and analysis of microstructure. Microscopy and Microanalysis also includes review articles, short communications, letters to the editor, and book reviews.

Visit our website at www.cambridge.org
Entomology for Students has proved a popular textbook by providing the reader with all the basic information on insects, mites and ticks that affect human health. It examines identification, the biology and ecology of these medically important arthropods and how they can be controlled.

An Introduction to Vascular Biology
From Basic Science to Clinical Practice
Second edition
Edited by Beverley J. Hunt
University of London
Lucilla Poston
University of London
Michael Schachter
Imperial College of Science, Technology and Medicine, London
and Alison W. Halliday
St George’s Hospital, London

Vascular biology is an exciting and advancing area of medical research, with many new and emerging pathophysiological links to an increasing number of diseases. This expanded new edition covers all these developments and conveys the basic science underlying a wide range of clinical conditions including atherosclerosis, hypertension, diabetes, and pregnancy.

Principles and Techniques of Practical Biochemistry
Fifth edition
Edited by Keith Wilson
University of Hertfordshire
and John Walker
University of Hertfordshire

This new edition of a highly popular text introduces experimental techniques which are routinely used in practical biochemistry and molecular biology today. Its coverage is comprehensive, but with most attention given to those techniques which undergraduates encounter in their practical classes, making it an essential read for all bioscience students.

‘…this book deserves a place in any modern pathology department and brings together a body of information which is traditionally scattered across several texts… it also represents excellent value for money.’

Cowan and Steel’s Manual for the Identification of Medical Bacteria
Third edition
Edited by G. I. Barrow and R. K. A. Feltham

A practical manual of the key characteristics of the bacteria likely to be encountered in microbiology laboratories and in medical and veterinary practice.

Recovery after Stroke
Edited by Michael P. Barnes
University of Hertfordshire

Bruce H. Dobkin
University of California, Los Angeles

and Julien Bogousslavsky
Université de Lausanne, Switzerland

This is a comprehensive guide to rehabilitation after stroke. It sets out the basic neuroscientific principles that underlie brain recovery and describes appropriate rehabilitation strategies for the many different functional problems that can arise after stroke. It is an essential reference for all members of the multidisciplinary stroke rehabilitation team.

The Circuitry of the Human Spinal Cord
Its Role in Motor Control and Movement Disorders
Emmanuel Pierrot-Deseilligny
Groupe Hospitalier Pitié-Salpêtrière, Paris

and David Burke
University of Sydney

Surveys the literature related to the control of spinal cord circuits in humans, their role in normal movement, and in disease states. Chapters are highly illustrated and consistently organised,
and each concludes with a helpful resume. This will be essential reading for research workers and clinicians involved in movement disorders.

Textbook of Neural Repair and Rehabilitation
Volume 1: Neural Repair and Plasticity
Edited by Michael Selzer
University of Pennsylvania
Stephanie Clarke
Leonardo Cohen
National Institute of Mental Health, Bethesda, Maryland
Pamela Duncan
University of Florida
and Fred Gage
Textbook of Neural Repair and Rehabilitation provides comprehensive coverage of the science and practice of neurological rehabilitation. This volume covers the basic sciences relevant to recovery of function following injury to the nervous system. It is an essential resource for neuroscientists and clinical rehabilitation professionals.

- 2005 246 x 189 mm 500pp

The Neuropathology of Dementia
Second edition
Edited by Margaret M. Esiri
University of Oxford
Virginia M. -Y. Lee
University of Pennsylvania School of Medicine
and John Q. Trojanowski
University of Pennsylvania School of Medicine
Completely rewritten and updated, this new edition is almost twice the size of its predecessor. Illustrated in colour throughout, and with contributions from the world’s leading authorities, it is the definitive reference on the neuropathology of dementia. It gives practical guidance to pathologists, describes the contribution of neuroimaging to diagnosis, and surveys the clinical features of dementia. New material includes:
• Three entirely new chapters on neuroimaging, molecular diagnostics, and transgenic models.
• Two chapters on tauopathies under new authorship.
• A chapter under new authorship on synucleinopathies, which includes multiple system atrophy.
• Completely rewritten and updated new edition of a highly successful book
• International team of top-notch experts covering comprehensively all aspects of the neuropathology of dementia
• Gives practical guidance for practising pathologists

From reviews of the first edition:
‘This up-to-date and authoritative account will be invaluable for practising neuropathologists and a treasured work of reference for psychiatrists and neuroscientists with an interest in dementia.’
International Journal of Geriatric Psychiatry

Neurodegenerative Diseases
Neurobiology, Pathogenesis and Therapeutics
Edited by Flint Beal
Cornell University, New York
Anthony E. Lang
University of Toronto
and Albert Ludolph
Universität Ulm, Germany
This major reference reviews the rapidly advancing knowledge of neurodegenerative diseases in the context of a comprehensive survey of each disease and its clinical features. The editors and contributors are among the leading experts internationally. Covering basic science, diagnostic tools and therapeutic approaches, the book focuses on all aspects of neurodegenerative disease, including the normal aging process. In each case the underlying genetics, neuropathological and clinical issues are fully reviewed, making this the most complete as well as the most authoritative reference available to clinicians and neuroscientists.

• Largest and most comprehensive reference text on neurodegenerative disease
• Editors and contributors include the world’s leading authorities internationally

• Covers basic neuroscience and clinical features

The A-Z of Neurological Practice
A Guide to Clinical Neurology
Roger A. Barker
University of Cambridge
Neil J. Scolding
Institute of Clinical Neurosciences, Bristol
Dominic Rowe
University of Sydney
and Andrew J. Larner
Walton Centre for Neurology and Neurosurgery, Liverpool
Organised from A to Z, this pocket-sized ready-reference, consists of a series of entries, each one describing, in a readable, structured and accessible style, an aspect of neurology. This will become an essential resource for all those undertaking training in neurology, as well as providing a reference source for generalists.

- 2004 186 x 123 mm 938pp

Magnetic Resonance Imaging in Stroke
Edited by Stephen Davis
Royal Melbourne Hospital and University of Melbourne
Marc Fisher
National Institute of Mental Health, Bethesda, Maryland
and Steven Warach
National Institute of Health, Bethesda, Maryland
In this profusely illustrated book world leaders review the scientific basis and clinical applications of MRI in stroke. It will appeal to a broad readership including stroke physicians, neurologists, neurosurgeons, rehabilitation specialists, and others with a clinical or research interest in cerebrovascular disease.

‘This book provides a good overview of the use of MRI in stroke and is of educational benefit to both clinicians and radiologists involved in the care of patients with stroke and has started to take on some very important issues …’

Diseases of the Nervous System
Clinical Neuroscience and Therapeutic Principles
Third edition
Edited by Arthur K. Asbury
University of Pennsylvania School of Medicine
Guy M. McKhann
The Johns Hopkins University School of Medicine
W. Ian McDonald
University College London
Peter J. Gooddy
University College London
and Justin C. McArthur
The Johns Hopkins University School of Medicine
This two-volume text is the most comprehensive neurology reference available. It encompasses the basic neuroscience and clinical features of the full range of neurological disorders, written by leading international experts in the field. Disease mechanisms are reviewed comprehensively, with particular relevance to the principles of therapy.
‘… a remarkable and successful effort to present in a comprehensive yet concise manner a massive amount of data on neurological diseases … the main value of this book for psychiatrists or neurologists working with children resides in the superb coverage of the general pathophysiological and therapeutic aspects. Paediatric specialists will find in this book new concepts and ideas about neurological disorders that may be of value at any age, allowing a better and more up-to-date understanding of some of the conditions they have to deal with.’

Disorders of Voluntary Muscle
Seventh edition
Edited by George Karpati
McGill University, Montréal
David Hilton-Jones
University of Oxford
and Robert C. Griggs
University of Rochester Medical Center
Foreword by Lord Walton of Detchant
The seventh edition of Disorders of Voluntary Muscle comes rewritten and redesigned with the clinician and clinical scientist in mind. It contains up-to-date scientific and clinical information on the etiology and pathogenesis of diseases of skeletal muscles, including recently identified diseases, and emphasises recent progress in diagnosis and treatment.
‘Hands down, this book is the best current publication in its category. The seventh edition is well timed to capture the massive increase of information since the previous edition of 1994.’

Neurocutaneous Disorders
Edited by E. Steve Roach
Wake Forest University, North Carolina
and Van S. Miller
University of Texas Southwestern Medical Center, Dallas
The neurocutaneous disorders comprise neurological syndromes featuring skin lesions and often eye lesions, central and peripheral nervous system tumors, brain malformations, mental retardation, and psychiatric syndromes or seizures. This is an authoritative, illustrated, up-to-the-minute, clinical review of these disorders and will be essential reading for neurologists and dermatologists.
‘The reader is most definitely in for a treat … This edition of Neurocutaneous Disorders provides the essential and forward-looking clinical and genetic data which points the way to the future.’

Stroke Syndromes
Second edition
Edited by Julien Bogousslavsky
Université de Lausanne, Switzerland
and Louis R. Caplan
Harvard Medical School
This revised and updated edition remains the definitive guide to patterns and syndromes in stroke. It describes clinical problems encountered in stroke patients and their differential diagnosis, enabling clinicians to differentiate between possible locations on the basis of symptoms and signs. A companion volume Uncommon Causes of Stroke is available.
‘This comprehensive work will provide its owner with a ready source of reference for a multitude of questions that might arise in the evaluation and localization of individual stroke patients.’

Uncommon Causes of Stroke
Edited by Julien Bogousslavsky
Université de Lausanne, Switzerland
and Louis R. Caplan
Harvard Medical School
A companion to the second edition of Stroke Syndromes, this comprehensive reference provides in-depth descriptions of many rare and relatively uncommon causes of stroke. An essential resource to help physicians diagnose and treat stroke patients who do not fit well into the usual clinical categories.
‘An excellent source book for anyone interested in stroke.’

Investigations with Transcranial Magnetic Stimulation
Edited by Simon Boniface
Addenbrooke's Hospital, Cambridge and Ulf Ziemann
Johann Wolfgang Goethe-Universität Frankfurt
Transcranial magnetic stimulation (TMS) has opened up new and fascinating avenues to study neural plasticity. This book, written by the world’s leading experts in the field, is an essential compendium on plasticity of the human brain in health and disease, for clinical neurophysiologists, neurologists, psychiatrists and neuroscientists.

Community Rehabilitation in Neurology
Michael P. Barnes
University of Newcastle upon Tyne and Harriet Radermacher
University of Newcastle upon Tyne
Analyses community rehabilitation needs from many different perspectives. Many examples of community rehabilitation schemes are presented, and case studies are used to highlight the main issues. The authors take an international view, and there are chapters dealing with the disabled child in the community and with neuropsychological rehabilitation.

Antiepileptic Drugs Combination Therapy and Interactions
Edited by Jerzy Majkowski
Foundation of Epileptology, Warsaw
Philip Patsalos
Institute of Neurology, London
Robert Mattson
Harvard University, Massachusetts and Blaise Bourgeois
Yale University, Connecticut
This book reviews the use of antiepileptic drugs focussing on the interactions between these drugs and between antiepileptic/other drugs, which can be beneficial or can cause harm. It aims to increase awareness of the possible impact of combination therapies. Pharmacokinetic/pharmacodynamic interactions are discussed supported by clinical/experimental data.

Childhood Epilepsy Language, Learning and Behavioural Complications
William B. Svoboda
Children with epilepsy often have interrelated language, learning and/or behavior complications which persist beyond seizure control. In this comprehensive book, William Svoboda distils a lifetime of clinical experience into three areas which address the main points of difficulty, looking at why the problems arise and assessing treatments.
‘This is a useful volume not only for reference but for browsing and as a source of information for those who look after children with epilepsy.’ Doctor’s Net

The Neuropsychiatry of Epilepsy
Edited by Michael Trimble
Institute of Neurology, London and Bettina Schmitz
Humboldt-Universität zu Berlin
Michael Trimble and Bettina Schmitz have assembled a multi-national team of experts to review and explore the interface between epilepsy and psychological disorders. Coverage is broad-ranging and offers both a diagnostic and management perspective. This will be essential reading for all professionals engaged in the treatment of epileptic patients.
‘… this book serves to show the huge possibilities for research in this fascinating area of neurology, with implications for our understanding of epilepsy and other affective disorders and better treatment of patients in the future.’

Women with Epilepsy A Handbook of Health and Treatment Issues
Edited by Martha J. Morrell
Columbia University, New York and Kerry L. Flynn
Columbia-Presbyterian Cancer Center, New York
Published in association with the Epilepsy Foundation of America, this handbook reviews the special problems faced by women with epilepsy. Hormone levels affect seizures and treatments affect fertility, pregnancy and birth outcomes. The authors aim to inform best practice and provide women with the information needed for effective self-advocacy.
‘The book is beautifully designed, printed, and produced … Women with Epilepsy deserves the attention of the wide audience for whom it is written. Men with epilepsy need not feel neglected because there is much content that is applicable to their seizure-related problems.’

Epilepsy and Movement Disorders
Edited by Renzo Guerrini
University of London
Jean Aicardi
Hôpital Robert-Debré, Paris
Frederick Andermann
Montreal Neurological Institute & Hospital and Mark Hallett
National Institutes of Health, Bethesda MD
For the first time, a distinguished, international team of specialists examines the clinical, neurophysiological, genetic, pharmacological and molecular factors which relate epilepsy and movement disorders. They examine and classify the characteristics of both disorders; examine the diagnostic problems; review the latest genetic findings; and assess the drug treatments.

The Cerebellum and its Disorders
Edited by Mario-Ubaldo Manto
University of Brussels
and Massimo Pandolfo
Université de Montréal
The first comprehensive text on the cerebellum and its disorders for many years, it ranges from basic neuroanatomy to a thorough survey of the sporadic and hereditary disorders of the cerebellum. Essential reading for a wide range of basic and clinical neuroscientists, neurologists and others studying or treating cerebellar disorders.
‘This book … constitutes a major reference text for those primarily interested in the basic aspects of cerebellar functions and dysfunctions, it brings information in this domain up to date in a clear and lucid fashion.’

Cerebrovascular Ultrasound
Theory, Practice and Future Developments
Edited by Michael G. Hennerici
Ruprecht-Karls-Universität Heidelberg, Germany
and Stephen P. Meairs
Ruprecht-Karls-Universität Heidelberg, Germany
This comprehensive text covers the fundamentals of ultrasound physics, new technology, and clinical applications of cerebrovascular ultrasound in all ages. Extracranial and intracranial Doppler applications in stroke, subarachnoid hemorrhage, and other disorders are presented by leading authorities in the field, with extensive illustrations.
‘The information covered in this text represents truly important advances in the understanding and clinical application of ultrasound techniques … I fully recommend this instructive and comprehensive to all physicians caring for these patients.’

The Vegetative State
Medical Facts, Ethical and Legal Dilemmas
Bryan Jennett
University of Glasgow
The strange state of being awake but unconscious that characterises the vegetative state provokes intense debate among health professionals, ethicists, philosophers and lawyers. This unique account, by someone who helped coin the term ‘persistent vegetative state’, surveys the medical, ethical and legal issues that surround this controversial topic.
— 2002 228 x 152 mm 242pp 54 tables

Upper Motor Neurone Syndrome and Spasticity
Clinical Management and Neurophysiology
Edited by Michael P. Barnes
University of Newcastle upon Tyne
and Garth R. Johnson
University of Newcastle upon Tyne
This is a thorough, practical reference and guide for clinicians, therapists, bioengineers and all health professionals involved in the management of spasticity. It ranges from the neurophysiology of spasticity to measurement of outcome and the most recent treatments, including intrathecal baclofen and surgery, and the management of spasticity in children.
‘… clear and clinically relevant … a good foundation for clinical practice …’.
Journal of Neurology, Neurosurgery and Psychiatry

Tinnitus Retraining Therapy
Implementing the Neurophysiological Model
Pawel J. Jastreboff
Emory University School of Medicine
and Jonathan W. P. Hazell
University College London Hospitals
This book presents a definitive description and justification for the Jastreboff neurophysiological model of tinnitus, outlining the essentials of Tinnitus Retraining Therapy (the highly successful treatment arising from it), reviewing the research literature, and providing an expert critique of other current therapeutic practices.
‘This book provides a comprehensive guide to Tinnitus retraining therapy … Not only does this book give a very detailed description of this type of therapy, it links the theory to clinical practice and offers practical advice for implementation … a text that is both rigorous and practical … Very readable Good value for money.’

Neonatology

Neonatal Nutrition and Metabolism
Second edition
Patti J. Thureen
Edited by William W. Hay
University of Colorado
Neonatal nutrition has a pivotal role in normal child development and is of even greater importance in the sick or premature neonate. This updated new edition includes a comprehensive account of the basic science, metabolism and nutritional requirements of the neonate, and an expanded number of chapters on clinical management.

Ethical Dilemmas in Pediatrics
Cases and Commentaries
Edited by Lorry Frankel
Stanford University, California
William Silverman
Columbia University, New York
Amnon Goldworth
Stanford University, California
and Mary Rorty
Stanford University, California
This collection of cases and commentaries in pediatrics highlights the difficult ethical dilemmas that can arise during high-tech hospital care of children in precarious circumstances. It serves as a teaching tool for clinical ethics and as an introduction for medical students and residents.

Fetal and Neonatal Brain Injury
Mechanisms, Management and the Risks of Practice
Third edition
Edited by David K. Stevenson
Stanford University School of Medicine, California
William E. Benitz
Stanford University School of Medicine, California
and Philip Sunshine
Stanford University School of Medicine, California
Now in its third edition, this is a comprehensive survey of fetal and neonatal brain injury arising from hypoxia, ischemia or other causes. The volume spans areas including epidemiology and pathogenesis, through to clinical manifestations and obstetric care, and then on to diagnosis, long-term outcomes, and medico-legal aspects.

Review of second edition:
'The material is excellent, well outlined, and well referenced. I would recommend it for all professionals who consult in intensive care nurseries, who are involved in complex obstetrics and who are involved in the medico-legal areas concerning 'bad babies' … This textbook should continue to be a landmark in neonatal brain injury for the years ahead.'

Fetal Growth and Development
Edited by Richard Harding
University of Western Ontario
and Alan D. Bocking
Monash University, Victoria
'This book has been timed perfectly with the increasing interest in the medical profession in the Barker's hypothesis and fetal origin of adult diseases … All the chapters are excellent in their contents and presentation.'

Journal of the International Neuropsychological Society
Editor-in-Chief: Kathleen Y. Haaland
NM VA Healthcare System, Albuquerque
Published for the International Neuropsychological Society
JINS aims to further scientific and research activities in neuropsychology and enhance communication among its cognate member disciplines. The journal publishes scholarly, peer-reviewed articles and includes original research, timely review articles and transactions of the annual meetings of the International Neuropsychological Society. Contributions reflect the interest of all areas of neuropsychology, including but not limited to: development of cognitive processes, brain–behavior relationships, adult neuropsychology, child neuropsychology, developmental neuropsychology, disorders of speech and language, and related topics such as behavioral neurology, neuropsychiatry, neuroimaging, and electrophysiology.

Obstetrics and Gynaecology

Obstetrics, Gynaecology and Women’s Health
Edited by Vivienne O’Connor
University of Queensland
and Gabor Kovacs
Monash University, Victoria

This is the essential textbook for students of obstetrics and gynaecology as well as women’s health more generally. Thoroughly modern in approach, it covers clinical topics and surgical procedures as well as providing detailed commentary on the contemporary social, psychological and economic issues that affect women’s health.

‘This comprehensive Australian textbook covers a lot more than a standard O & G text … this text is a worthwhile resource to update GPs on women’s health issues and is recommended.’

Women’s Health in Mid-Life
A Primary Care Guide
Edited by Jo Ann Rosenfeld
The Johns Hopkins University

This book addresses the major healthcare issues of women in their midlife, between the ages 40 to 65. This is a time of challenge and an opportunity for preventive healthcare. Written by 20 primary care physicians, this book will help family practitioners provide the best possible healthcare for these women.

‘This book does what it says on the cover, it explores all areas of women’s health not only contraception and the menopause but other health problems too.’

Uterine Fibroids
Embolization and other Treatments
Edited by Togas Tulandi
McGill University, Montréal

Uterine fibroids are the single most common cause of surgery in women apart from childbirth. This pioneering new book compares and contrasts conventional surgical treatments with the emergence of uterine artery embolization as an alternative and less invasive procedure, and looks set to provide a turning-point for the future.

‘This is a good and timely book …’

Pathology

Embryo and Fetal Pathology
Color Atlas with Ultrasound Correlation
Enid Gilbert-Barness
University of South Florida and University of Wisconsin Medical School
and Diane Debich-Spicer
University of South Florida
With contributions by Mark Williams
Kathy B. Porter
and Susan Guidi
Foreword by John M. Opitz
University of Utah

Exhaustively illustrated in color with over 1000 photographs, figures, histopathology slides, and sonographs, this uniquely authoritative atlas provides the clinician with a visual guide to diagnosing congenital anomalies in every organ system in the human fetus. It covers the full range of embryo and fetal pathology, from point of death, autopsy and ultrasound, through specific syndromes, intrauterine problems, organ and system defects to multiple births and conjoined twins. Gross pathologic findings are correlated with sonographic features to confirm visually the diagnoses for all organ systems. All practitioners of perinatal-fetal medicine will find this atlas an invaluable resource.

- Fully illustrated in color with over 1000 slides, sonographs and figures
- Correlates ultrasound and prenatal diagnosis
- Illustrations form a unique dataset derived from a lifetime of work in the field
- This is a superb book, and the modest title of 'Atlas' belies its comprehensive coverage of perinatal pathology. The text is substantial, and through extensive use of summary tables and bullet points offers a didactic overview of the subject rather than a fully referenced scientific text.'

Biomarkers of Disease
An Evidence-Based Approach
Edited by Andrew K. Trull
Papworth Hospital, Cambridge
Lawrence M. Demers
Pennsylvania State University
David W. Holt
St George’s Hospital Medical School, University of London
Atholl Johnston
St Bartholomew’s Hospital and the Royal London School of Medicine and Dentistry
J. Michael Tredeg
Guy’s, King’s and St Thomas’ School of Medicine and Christopher P. Price
St Bartholomew’s Hospital and Royal London School of Medicine & Dentistry

This new publication takes a critical, evidence-based look at the efficacy of new diagnostic tests which are increasingly being used to evaluate organ damage and dysfunction. Some of these assist in diagnosis, others provide a means of monitoring the state of progression of disease and the effectiveness of therapeutic options. '… contains an amazing wealth of information … I know I will refer to it frequently … and will keep it readily accessible on my bookshelf.'

Illustrated Pathology of the Spleen
Bridget S. Wilkins
University of Southampton
and Dennis H. Wright
University of Southampton

‘This volume serves as an illustrative atlas, as a bench manual, as a text and as a source of useful selected references … the book will not only be of great value to trainees but will also be useful to experienced consultants and will become an indispensable guide that should be readily available in all libraries and reporting rooms in departments of histopathology.’

For regular email alerts visit www.cambridge.org/alerts
Case Studies in Prostate Cancer  
Adrian Harnett and Leslie Moffat  
Featuring over 30 detailed case studies, with comprehensive explanatory text and full colour illustrations throughout, this book provides any healthcare professional involved in the diagnosis and management of prostate cancer with a selection of thought-provoking, practice-changing problems in this all too common malignant condition.

Progress in Pathology Volume 7  
Edited by Nigel Kirkham  
The seventh volume in this renowned series builds upon the popularity and success of previous volumes to present a series of cutting-edge chapters outlining some of the key advances in modern pathology. Chapters are written by experts in their field.

Progress in Pathology Volume 6  
Edited by Nigel Kirkham and Neil A. Shepherd  
The sixth volume in this renowned series builds upon the popularity and success of previous volumes.

General Pathology Vivas  
David Lowe  
This book is packed with useful information presented in A-Z format, to help the reader gain rapid access to related groups of questions, making self-testing in the hospital environment easy. General Pathology Vivas is applicable to undergraduate medical candidates and for the viva components of MRCS, AFRCSEd, MRCP, FRCOG examinations.

Pediatrics  
Pediatric Orthopedics for Primary Care Physicians  
Second edition  
Edited by Dennis S. Weiner  
Children's Hospital Medical Center of Akron, Ohio  
Edited in association with Kerwyn Jones  
Southern Illinois University School of Medicine, Springfield  
This revised and extended new edition retains and builds on the features that made the first edition such a popular text for pediatricians and primary care physicians: orthopaedic disorders are arranged according to age of onset and also according to their frequency of occurrence, supplemented with guidelines for orthopaedic referral.  
‘This well-illustrated and practical textbook, designed for primary care physicians, is written by a true expert in the field … Weiner’s authoritative second edition fulfills its intended purpose and provides an excellent reference for primary care doctors, who can be grateful that a surgeon of Weiner’s renown has taken the effort to produce a quality second edition.’

A Clinical Guide to Inherited Metabolic Diseases  
Third edition  
Joe T. R. Clarke  
University of Toronto  
This user-friendly clinical handbook provides a clear and concise overview of how to go about recognizing and diagnosing inherited metabolic diseases. To help make the correct diagnosis, the book is organized according to the clinical symptoms presenting in these patients. This new edition includes much new and up-dated material.  
‘… should be read thoroughly by any pediatric resident, genetic resident, or clinical fellow caring for patients with metabolic disorders.’

Sudden Death in Infancy, Childhood and Adolescence  
Second edition  
Roger W. Byard  
University of Adelaide  
This unique, comprehensive survey of virtually all aspects of sudden death in infants and childhood will be an essential source of reference for pathologists, clinicians and lawyers. Individual sections deal in detail with deaths due to inflicted and non-inflicted injuries and to natural diseases.  
‘This is an outstanding book for practitioners, pathologists, and researchers … Each chapter reads like a conference in which the pathologist holds the clues and answers questions from the clinician and other investigators from the autopsy table.’

American Journal of Medical Genetics
Child and Adolescent Obesity
Causes and Consequences, Prevention and Management
Edited by Walter Burniat
University of Brussels
Tim J. Cole
Institute of Child Health, University College London
Inge Lissau
National Institute of Public Health, Copenhagen
and Elizabeth M. E. Poskitt
London School of Hygiene and Tropical Medicine

Aimed at doctors, and all health-care professionals, this book addresses the ever-increasing problem of obesity in children and adolescents, the long-term health and social problems that arise from this, and approaches to prevention and management.

From the Foreword:
‘The epidemic of obesity is not yet viewed with the urgency it demands … The questions and challenges that the epidemic provokes provide us with an exciting and unique opportunity to shape a new field.’
William H. Dietz

The Newborn Brain
Neuroscience and Clinical Applications
Edited by Hugo Lagercrantz
Karolinska Institutet, Stockholm
Mark Hanson
University of Southampton
Philippe Evrard
Faculté de Médecine Xavier-Bichat, Paris
and Charles Rodeck
University College London Medical School

At a time of rapid and exciting advances in developmental neurobiology, a distinguished international team of clinicians, neuroscientists and geneticists presents the basic mechanisms of brain development, and emphasizes the clinical applications of basic neuroscience. This book provides a uniquely authoritative survey for scientists and clinicians alike.

‘… wonderful book … The editors smoothly transition from the bench to the bedside by examining techniques the clinician can use to evaluate the state of brain development and injury … At a time when there is rapidly improving understanding of brain development and neonatal brain injury, this book should be of interest to scientists and clinicians alike.’

Child and Adolescent Psychiatry
A Clinician's Handbook of Child and Adolescent Psychiatry
Edited by Christopher Gillberg
Göteborgs Universitet, Sweden
Richard Harrington
University of Manchester
and Hans-Christoph Steinhausen
Universität Zürich
This authoritative clinical handbook provides a comprehensive, evidence-based overview of the main disorders encountered by child and adolescent psychiatrists. Emphasis is on good clinical practice and quality of patient care. The authors' intention is not to cover exhaustively all the relevant science, but rather to present in condensed form any research findings that are significant for clinical practice. For coherence, each chapter is constructed the same way and the disorders covered are based on the ICD-10 and DSM-IV classifications. Appendices include documents for assessment of intervention planning and evaluation.
- Evidence-based
- Emphasis on clinical practice and quality of care
- Coverage based on ICD-10 and DSM-IV classifications
- 2004 247 x 174 mm 546pp

NEW EDITION

Cognitive Behaviour Therapy for Children and Families
Second edition
Edited by Philip J. Graham
Institute of Child Health, University College London
 Entirely revised and augmented with 11 new chapters, the authors build strongly on the aims of the previous edition to provide the latest scientific validation of cognitive behaviour therapy with practical treatment guidance for professionals working with disturbed children. Coverage ranges from school refusal to eating and sleeping disorders and substance abuse. It will be invaluable to clinicians providing psychological treatment for children and families.
From a review of the first edition:
'... impressive ... this book is likely to be read and consulted widely.'
Behaviour Research and Therapy

- Completely revised and rewritten, with 11 entirely new chapters
- Describes ways in which Cognitive Behaviour Therapy can be combined with other treatments
- Covers a broad range of disorders
'... clearly written by a number of international authorities in the field. ... This book will be useful to child psychiatrists and other child mental health professionals, as well as social workers, educationalists and school nurses. It is highly recommended for bench and departmental libraries.'

Suicide in Children and Adolescents
Edited by Robert A. King
Yale University, Connecticut
and Alan Apter
Tel-Aviv University
Suicide is a devastating problem ranking between fourth and second as the most common cause of death for 10–24 year olds. Can it be predicted and prevented? To address these questions, experts from all areas in psychiatry have brought together in this volume the most recent findings in their fields.
'This book moves beyond the traditional approach of viewing suicide as a diagnostic feature of depression, personality disorder or other diagnostic category ... There are several clinically orientated chapters, which I would recommend anyone assessing potentially suicidal children to read ... each chapter provides an authoritative account of the current literature, which is generally well appraised and I would definitely recommend this book to anyone who has any contact with suicidal youth ...'.

Practical Child and Adolescent Psychopharmacology
Edited by Stan Kutcher
Dalhousie University, Nova Scotia

This important book synthesises the most recent findings about drug treatment for children with a broad range of psychiatric disorders, discussing tolerability, efficacy and appropriate use within a social and developmental context. It is essential reading for all mental health professionals to inform practice and improve patient outcomes. ‘… a very welcome addition to the still relatively small number of reference texts in child and adolescent psychopharmacology … the overall quality of the text is excellent … this book makes an important contribution to a field where clinical practice tends to run ahead of the clinical evidence-base and remain relatively uninformed by basic neuroscience. This book should be essential reading for all child psychiatry trainees …’. Journal of Child Psychology

Outcomes in Neurodevelopmental and Genetic Disorders
Edited by Patricia Howlin
St George’s Hospital Medical School, University of London
and Orlee Udwin
Mary Sheridan Centre for Child Health, London

A team of international experts describe the causes and treatment of a variety of developmental and genetic disorders, focusing on course and outcome over time – issues with important implications for education, health and social services. The authors give clinicians succinct, up-to-date research summaries and practical guidelines for intervention and management.

‘The book is essential reading for any clinician involved with children or adults with developmental neuropsychiatric disorders. I highly recommend it.’

The Depressed Child and Adolescent
Second edition
Edited by Ian M. Goodyer
University of Cambridge

This thoroughly revised and updated new edition combines theory and practice to discuss the psychological, neurochemical and genetic causes of depression in young people and give an account of the clinical characteristics, frequency and treatment of the condition. This book will appeal to all mental health professionals.

‘… the book gives thorough descriptions of the key assessment tools and presents balanced arguments, that make a positive contribution to the debate about the assessment and evaluation of SLD … I would recommend it as a useful, up-to-date resource both for established clinicians and for trainees new to the field.’

Multiaxial Classification of Child and Adolescent Psychiatric Disorders
The ICD-10 Classification of Mental and Behavioural Disorders in Children and Adolescents
World Health Organisation
Introduction by Sir Michael Rutter
ICD10 descriptions have been grouped into multiaxial form, particularly adapted for ease of use with mental disorders in childhood and adolescence. The popular original framework of four axes has now been greatly improved by the inclusion of both a new axis for psychosocial situations and a sixth axis which allows for coding on the basis of disability.
‘… laid out in a clear, systematic and easily accessible way.’
The British Journal of Psychiatry
— 1996 228 x 152 mm 310pp
— 978 0 521 58133 2 (0 521 58133 8)
Hardback £70.00
Developmental Medicine and Child Neurology (DMCN) is one of the world's leading journals on paediatric neurology, and one of the leaders in the whole field of paediatrics. In 2005 there will be twelve issues as usual, plus at least four supplements. DMCN is the officially designated journal of the British Paediatric Neurology Association and the American Academy for Cerebral Palsy and Developmental Medicine. It covers a wide range of clinical topics concerning the neurological diseases and disabilities of children. The journal is of interest both to specialists engaged in medical research and to clinicians in the fields of paediatrics, genetics, orthopaedics, neurology and other relevant areas. It features original articles, case reports, annotations, letters to the editor, and book reviews.

Bioterrorism
Psychological and Public Health Interventions
Edited by Robert J. Ursano
Uniformed Services University School of Medicine, Bethesda MD
Ann E. Norwood
Uniformed Services University School of Medicine, Bethesda MD
and Carol S. Fullerton
Uniformed Services University School of Medicine, Bethesda MD

Bioterrorism creates chaos and disruption on a global scale, and it is believed to incur the most devastating psychological sequelae of all disasters and terrorist events. Planning and pre-disaster exercises are essential for allocating resources and devising effective mental health interventions. Includes two CDs.

'This is a superb book that will provide clinicians, researchers, and community leaders with an in-depth understanding of the consequences of a bioterrorism attack and help them better prepare and respond to future events.'

Terrorism and Disaster
Individual and Community Mental Health Interventions
Edited by Robert J. Ursano
Uniformed Services University of the Health Sciences, Maryland
Carol S. Fullerton
Uniformed Services University of the Health Sciences, Maryland
and Ann E. Norwood
Uniformed Services University of the Health Sciences, Maryland

Many professionals believe that terrorism produces the highest and most diffuse rates of psychiatric sequelae of all the types of disaster. In this book, the world’s experts assess the lessons learned from the most recent atrocities in terms of prevention, intervention, the effect of leadership, and the effects of contamination.

‘Comprehensive, scholarly, gripping reading. This is a SUPERB book. This volume is the most comprehensive, scholarly and well-done book covering the entire range of traumat and disasters … Material never before presented in such a readable and definitive form.’

Parental Psychiatric Disorder
Distressed Parents and their Families
Second edition
Edited by Michael Göpfert
Webb House Democritus Therapeutic Community, Crewe
Jeni Webster
5 Boroughs Partnership, Warrington
and Mary V. Seeman
University of Toronto

It is indisputable that parental mental illness has serious and adverse effects on the child. In this completely rewritten second edition, an international, multidisciplinary team of professionals review treatment interventions from a practical, clinical point of view. It is essential reading for professionals dealing with adult mental illness and child-care.

‘A unique and innovative approach to family issues in psychiatric disorders. The authors tackle a broad range of complex issues that are rarely covered in the depth or with the expertise that this volume brings. This book is a major contribution to the field and provides the kind of international perspective that enhances our understanding of the complex dimensions of psychiatric disorders from a multigenerational and cross-cultural perspective.’

Somatoform Disorders
A Medicolegal Guide
Michael Trimble
Institute of Neurology, London

This is an in-depth, clinically orientated review of somatoform disorders and related clinical presentations (such as chronic fatigue syndrome) and how they present in a medico-legal setting. It is aimed at both clinicians and lawyers dealing with injury claims where these disorders impact much more frequently than is generally recognised.

‘Trimble’s literary references and clear, witty prose make this book easy and even entertaining to read ... the points he makes on somatoform disorders in general are of value to all practitioners, and his perspective on medical reports and expert evidence are of especial value.’

Velo-cardio-facial Syndrome
A Model for Understanding Microdeletion Disorders
Edited by Kieran Murphy
Education and Research Centre, Royal College of Surgeons of Ireland
and Peter Scambler
Institute of Child Health, University College London

Velo-cardio-facial Syndrome (VCFS) is a genetic disorder caused by deletion of part of chromosome 22. The focus is on clinical issues with chapters devoted to psychiatric disorders, neuroimaging, speech and language, cardiac, ENT, gastrointestinal, ophthalmic and urological manifestations. This book has been authored by leading international VCFS clinicians and researchers.

Psychodermatology
The Psychological Impact of Skin Disorders
Edited by Linda Papadopoulos
London Guildhall University
and Carl Walker
London Metropolitan University

Psychodermatology covers all aspects of how the mind and body interact in relation to the onset and progression of various skin disorders. This book is the first text written by a multidisciplinary team of psychiatrists, psychologists, child specialists and dermatologists for all the health professionals who treat patients with skin problems. They cover a broad range of issues affecting these patients, including: stigma, coping, relationships, psychological treatments, the impact on children, comorbidities, psychoneuroimmunology, quality of life and psychological treatments.

• The first multidisciplinary text to cover the body-mind interactions affecting skin disease
• Written for all health professionals working with patients with skin diseases
• Takes a broad-ranging approach from psychoneuroimmunology to dealing with stigma

Modelling and Managing the Depressive Disorders
A Clinical Guide
Gordon Parker
University of New South Wales, Sydney
and Vijaya Manicavasagar
University of New South Wales, Sydney

This book argues that the current model for describing the mood disorders causes problems in diagnosis and management. The authors present an alternative approach to defining and managing the full range of depressive disorders.

— 2005  247 x 174 mm  153pp  2 tables  69 figures

The Treatment of Anxiety Disorders
Clinician Guides and Patient Manuals
Second edition
Gavin Andrews
University of New South Wales, Sydney
Mark Cramer
University of Melbourne
Rocco Crino
University of New South Wales, Sydney
Caroline Hunt
University of Sydney
Lisa Lampe
University of New South Wales, Sydney
and Andrew Page
University of Western Australia, Perth

In this completely revised second edition over half the material is new, and there is an entirely new section covering post-traumatic stress disorder. Clinician Guides and Patient Treatment Manuals for each anxiety disorder provide a theoretical overview and a framework to help psychiatrists and clinical psychologists build successful treatment programs.

‘In my opinion this book deserves a place in any medical library for its clear and comprehensive theoretical overview, and its synthesis of theory and practice for all doctors whose work brings them into contact with anxious patients.’

Catatonia
A Clinician’s Guide to Diagnosis and Treatment
Max Fink
State University of New York, Stony Brook
and Michael Alan Taylor
Fink University of Health Sciences, Chicago

This book, by two leading neuropsychiatrists, describes the features of catatonia, teaches the reader how to identify and treat the syndrome successfully, and describes its neurobiology. Patient vignettes illustrate the principles of diagnosing and treating patients with catatonia. It is an essential clinical reference for psychiatrists and neurologists.

‘... an excellent book on catatonia. The book is a very interesting and clinically relevant review of the authors’ extensive experience in the research and treatment of this neuropsychiatric illness ...’ Authors Fink and Taylor
**Schizophrenic Speech**  
*Making Sense of Bathrooms and Ponds that Fall in Doorways*  
Peter J. McKenna  
Cambridge Health Authority  
and Tomasina M. Oh  
University of Singapore

This book reviews our knowledge of the incoherent speech which can present as a symptom of schizophrenia. It covers clinical presentation, differential diagnosis and the theories proposed to account for the symptom in these 'thought disordered' patients, ranging from the psychoanalytic to there being a form of aphasia involved.

**Neurodevelopment and Schizophrenia**  
*Edited by Matcheri S. Keshavan*  
James L. Kennedy  
Clarke Institute of Psychiatry, Toronto  
and Robin M. Murray  
Institute of Psychiatry, London

Developmental neurobiology has made some important strides towards elucidating the pathophysiology of psychiatric disorders. This volume explores the link between basic science and clinical insights in the field of schizophrenia research. The book will be valuable to researchers in psychiatry and neurobiology, students in psychology, and all mental health practitioners.

Univestiteit Maastricht, Netherlands  
and Mary Cannon  
Institute of Psychiatry, London

The first comprehensive, epidemiological overview of schizophrenia, drawing together the findings from social, genetic, developmental and classical epidemiology. Controversial issues on its nature and cause are explored in depth, and separate chapters are devoted to suicide, violence and substance abuse, new prospects for treatment, and prevention.  

‘This is a refreshing and helpful book that presents an up-to-date and comprehensive understanding of schizophrenia. It is also a great book to learn about the application of epidemiology on mental health.’

**Cognitive Therapy across the Lifespan**  
*Evidence and Practice*  
*Edited by Mark A. Reinecke*  
Northwestern University Medical School, Illinois  
and David A. Clark  
University of New Brunswick

Foreword by Aaron T. Beck

This balanced and critical overview examines the evidence supporting the effectiveness of cognitive-behavioral approaches to treating clinical problems across the lifespan. It analyses the cognitive models on which these treatments are based, and identifies the clinical and conceptual problems, giving specific recommendations for addressing them.  

‘… an excellent introduction to the field … Perhaps the most important contribution of this volume, however, is found in the discerning, critical stance taken by the contributors. … This book unflinchingly examines the strengths and weaknesses of cognitive approaches to psychotherapy and the empirical foundations on which they stand. … This is a remarkable and valuable volume.’

Psychiatric and Cognitive Disorders in Parkinson's Disease

Sergio E. Starkstein
Buenos Aires Neuropsychiatric Center

and Marcelo Merello
Raul Carrea Institute of Neurological Research-FLENI

A clear and comprehensive account of emotional and cognitive aspects of Parkinson’s disease, based on the neurological and psychiatric assessment of hundreds of patients by the authors. It covers psychiatric and cognitive disorders in practical detail, and also reviews the behavioural side effects of anti-parkinsonian treatments.

‘The layout and style is accessible and clear and the addition of clinical vignettes makes for an engaging and educational read … There is sufficient scientific detail for the specialist, but with clear practical guidelines, case studies, and rating scales it will meet the needs of all those working with people who have PD.’

Challenging Behaviour
Analysis and Intervention in People with Severe Intellectual Disabilities

Second edition
Eric Emerson
University of Lancaster

In this thoroughly revised, expanded and updated new edition, Eric Emerson provides a comprehensive, cross-disciplinary overview of challenging behaviour resulting from learning disabilities. This will be essential reading for clinicians and all health care professionals involved in the assessment and treatment of challenging behaviour.

‘In Challenging Behaviour Emerson carefully defines his terms, sets the problem in the social context, and demonstrates a systematic approach to the analysis and treatment of behavioural pathology in this little understood aspect of learning difficulties … and it has the great merit of being set against issues of quality of life.’

British Medical Journal
— 2001 247 x 174 mm 232pp 7 tables 8 figures

Insomnia
Principles and Management
Edited by Martin P. Szuba
University of Pennsylvania

Jacqueline D. Kloss
Drexel University, Philadelphia

and David F. Dinges
University of Pennsylvania

This book is the first of its kind to collate the up-to-date scientific data relating to insomnia in order to improve clinical management. A team of experts covers insomnia throughout the lifespan, the relevant biological systems, and the impact of related problems (such as shift work, mood disorders, etcetera).

‘… a well-balanced account of the problems faced by those with insomnia and those caring for insomniaics … this book is very good value.’

Stress, the Brain and Depression

H. M. van Praag
Universiteit Maastricht, Netherlands

E. R. de Kloet
Universiteit Leiden

and J. van Os
Universiteit Maastricht, Netherlands

Can traumatic life events cause depression? The authors structure their examination around three major themes: the pathophysiological role of stress in depression; whether or not a subtype of depression exists that is particularly stress-inducible; and, finally, how best to diagnose and treat depression in relation to its biological underpinnings.

‘In shedding light on the causal and temporal relationships between stress and depression the authors also show their extensive knowledge. Their thought provoking presentation of the history of psychiatric classification is a refreshingly welcome overview, punctuated with scepticism regarding the ‘nosologomania in psychiatry.’ The detailed information is systematically presented; and each chapter builds towards (preliminary) conclusions, making this complex topic relatively easy to understand … The combined decades of experience in biological psychiatric research give the authors a clear view of this problem and the necessary experience to explain the solution.’

The Social Construction of Intellectual Disability

Mark Rapley
Murdoch University, Western Australia

This, the first book-length application of discursive psychology to intellectual disability, shows through a range of case studies which draw upon ethnomethodological and conversation analytic scholarship, how persons categorized as ‘intellectually disabled’ are produced, as such, in and through their moment-by-moment interaction with care staff and other professionals.

‘The book presents a timely challenge to our profession. Mark Rapley’s writing just gets better: make sure you get the chance to learn from him.’

Disorders of Affect
Regulation
Alexithymia in Medical and Psychiatric Illness
Greame J. Taylor
University of Toronto
R. Michael Bagby
University of Toronto
and James D. A. Parker
Trent University, Peterborough, Ontario
Foreword by James Grotstein
University of California, Los Angeles
An entirely new perspective on how emotions influence mental and physical health. The authors present recent thinking about the development and regulation of emotions, and argue that many common illnesses may result from dysfunction of these processes. Illustrated by clinical vignettes and including descriptions of innovative therapeutic approaches, this book offers both a stimulating and practical reference.
‘The authors make some excellent suggestions as to how some therapeutic approaches can have meaningful impact on alexithymic patients … This book is provocative and thorough … The reference materials and indexes are excellent without being overwhelming.’
Journal of the American Medical Association
— 1999 228 x 152 mm 362pp 3 tables 6 figures

The Anxiety Disorders
Russell Noyes, Jr
University of Iowa
and Rudolf Hoehn-Saric
The Johns Hopkins University
This comprehensive text covers all the anxiety disorders found in the latest DSM and ICD classifications. It provides detailed information about seven principal disorders, covering diagnostic criteria, epidemiology, etiology and pathogenesis, clinical features, natural history and differential diagnosis, and treatment approaches.
- … the book is clearly written and provides information on both biological and psychological aspects of a range of anxiety disorders. I would recommend this book to medical students with an interest in psychiatry or to psychology students with an interest in the medical approach to anxiety disorders.

Practical Development in Mental Healthcare
Roland Dix
Stephen Periera
and Colum Clinton
Pragmatic and practical in approach, this book was written to meet the need for ‘real world’ guidance in practice development for clinicians and managers to enable them to substantially improve standards from an economic, educational, practice, and clinical care perspective. It describes the real world process of practice development at the sharp end of acute psychiatry within a psychiatric intensive care unit which resulted in substantial improvements in patient, staff and referrer satisfaction.

Development and Psychopathology
Editors: Dante Cicchetti
University of Rochester, Mt. Hope Family Center
and Barry N Nurcombe
Vanderbilt University
This multidisciplinary journal is devoted to the publication of original, empirical, theoretical and review papers which address the interrelationship of normal and pathological development in adults and children. It is intended to serve and integrate the emerging field of developmental psychopathology which strives to understand patterns of adaptation and maladaptation throughout the lifespan. This journal is of interest to psychologists, psychiatrists, social scientists, neuroscientists, paediatricians and researchers.

Psychiatry
Public Health

Air, the Environment and Public Health

Anthony Kessel
London School of Hygiene and Tropical Medicine

An exploration of the theme of air and health from ancient civilisations to the present day. The author examines the changing conceptions of air and health alongside historical developments in public health. These historical antecedents provide an illuminating insight into modern air pollution, epidemiology, and climate change.

— 2005 247 x 174 mm 248pp

Global Crises, Global Solutions

Edited by Bjørn Lomborg
Aarhus Universitet, Denmark

Leading economists address ten of the most serious challenges facing the world today: Climate Change, Communicable Diseases, Conflicts, Education, Financial Instability, Corruption, Migration, Malnutrition and Hunger, Trade Barriers, Access to Water. World experts evaluate various policy options for each problem, stimulating the debate on prioritising our response to global challenges.

The Economist selected Global Crises, Global Solutions as one of the best books in 2004

'A hugely sensible book about global health and environmental problems, based on the 'Copenhagen Consensus' project documented in The Economist. Its authors, eminent economists, recognise that the resources to tackle such problems are finite and need to be applied where they are most likely to be effective. Better, for instance, to spend resources on the immediate problem of AIDS in Africa than the more distant one of global warming. This book is a healthy antidote to the narrow views of single-issue pressure groups.'

Human Frontiers, Environments and Disease

Past Patterns, Uncertain Futures

Tony McMichael
National Centre for Epidemiology and Population Health

This compelling account charts the relentless trajectory of humankind across time and geography, and its changing survival patterns, from several million years ago when our ancient ancestors roamed the African Savannah to today’s populous, industrialised, globalising world.
'This impressive book by an eminent public health scientist explores our most important relationship: our interaction with the environment. It is essential reading for all concerned with assuring future human health – and our very survival.'

Reproductive Medicine

Birth, Distress and Disease

Placenta-Brain Interactions

Edited by Michael L. Power
American College of Obstetricians and Gynecologists, Washington DC

and Jay Schulkin
American College of Obstetricians and Gynecologists, Washington DC

This volume examines the role of steroids and peptides in the regulation of pregnancy and pregnancy outcome, and their long-term effects including possible influences on adult-onset diseases. Perturbations to this regulatory system can result in poor pregnancy outcome. This is a fascinating account of an important area of materno-fetal medicine.

Testosterone

Action, Deficiency, Substitution

Third edition

Edited by E. Nieschlag
Westfälische Wilhelms-Universität Münster, Germany

and H. M. Behre
Westfälische Wilhelms-Universität Münster, Germany

Assisted by S. Nieschlag

This is an authoritative, up-to-date reference on testosterone, and its role in human physiology and pathology. It covers biosynthesis, mechanisms of action and reviews effects on brain and behaviour, spermatogenesis, hair growth, bones, muscles, erythropoiesis, the cardiovascular system and lips, erection, and the prostate. Therapeutic and contraceptive applications are assessed.

‘… I was deeply impressed by the brilliance of selection and organization of topics, their authors, technical format and clear and instructive literary styles, which all result from the excellent editorial work … The book certainly should be considered an important contribution to understand the contemporary knowledge about testosterone and about androgens in general.’

Biological and Pathology of the Oocyte

Its Role in Fertility and Reproductive Medicine

Edited by Alan O. Trounson
Monash University, Victoria

and Roger G. Gosden
Eastern Virginia Medical School

The human oocyte or egg is the rarest and most rapidly ageing cell in the body, and yet one that is essential for fertility. This book is about the development and pathology of the oocyte, and new technologies to manipulate, enhance, and control fertility.

‘… possibly the definitive work on the oocyte in 350 pages illustrated by a further 12 pages of colour figures … this book is thus not only essential reading for all scientists and clinicians involved with infertility, it has a wider appeal to all specialists in reproductive medicine, animal breeding and even fetal development.’

In Vitro Fertilization

Second edition
Kay Elder
Bourn Hall Clinic, Cambridge

and Brian Dale
Centre for Reproductive Biology, Naples

This comprehensively updated and substantially expanded new edition builds on its successful and popular predecessor, whilst retaining the practical features which made the first edition such an essential guide to IVF. This new edition distils a wealth of practical and scientific detail for the benefit of all IVF practitioners.

‘… an excellent handbook for good IVF laboratory practice right down to a description of total quality management (TQM) systems … concise, well written and should be mandatory reading for all potential and actual embryologists, as well as for those clinicians seeking a wider understanding of the subject.’

Zygote
The Biology of Gametes and Early Embryos
Editor-in-Chief: Brian Dale
Centre for Reproductive Biology, Clinica Villa del Sole, Napoli

Editors: Jacques Cohen
Saint Bamabas Medical Center and Nori Satoh
Kyoto University

Zygote publishes original, high-quality papers, short communications, topical review articles and a Forum section, where controversial topics are discussed. Studies on plants, invertebrates, lower vertebrates, mammals and humans at the molecular and cellular levels are published, leading to a unique multidisciplinary publication. Topics include gametogenesis, sperm-egg interaction, activation of gametes, polarity in oocytes and zygotes, cell-cycle control, cleavage, cell-cell interactions, and the generation of early cell lineages.

Exercise Testing and Interpretation
A Practical Approach
Christopher B. Cooper
University of California, Los Angeles
and Thomas W. Storer
El Camino Community College, Los Angeles

A clearly illustrated and practical approach to the acquisition, interpretation, and reporting of physiologic responses to exercise. Clinical cases help to reinforce the text, and useful appendices provide algorithms, calculations and answers to frequently asked questions. A glossary of terms, symbols and definitions is also included.

‘Would it quell the anxiety I usually experience when faced with an exercise test report? The answer is a … yes. The book takes the reader steadily through the indications for exercise testing, technical aspects of their conduct and the maintenance of exercise testing equipment.’

Chronic Respiratory Disease Journal

Respiratory Medicine

Drugs for the Treatment of Respiratory Diseases
Edited by Domenico Spina
King’s College London
Clive P. Page
King’s College London
William J. Metzger
National Jewish Medical and Research Centre, Denver
and Brian J. O’Connor
King’s College London

This timely reference surveys and evaluates the drug treatments available for the main lung diseases including asthma, tuberculosis, chronic obstructive pulmonary disease, lung cancer, and respiratory infections. The recent re-emergence of tuberculosis and the increase in cases of asthma underlines the importance of finding effective new treatments for these diseases.

Nitric Oxide in Bone and Joint Disease
Edited by Mika V. J. Hukkanen
University of Helsinki
Julia M. Polak
Imperial College of Science, Technology and Medicine, London
and Sean P. F. Hughes
Imperial College of Science, Technology and Medicine, London

This book is the first to draw together current knowledge on the role of nitric oxide in such common diseases as arthritis and osteoporosis.

Surgery

Clinical Scenarios in Surgery
Aljafri Majid
Universiti Malaya

Clinical Scenarios in Surgery gathers together a number of classic surgical problems in a concise and standardised format and offers a framework on which to base the teaching and practice of intensive care. Whilst principally aimed at postgraduate surgeons in training, this book should also appeal to tutors and candidates involved in undergraduate examinations in surgery.

Surgical Anatomy of the Heart
Third edition
Benson R. Wilcox
UNC Hospitals, Chapel Hill
Andrew C. Cook
University College London
and Robert H. Anderson
University College London

This is the latest edition of what has become a classic textbook on cardiac anatomy. The new edition will be of interest not only to the surgeon, but also to the cardiologist, anaesthesiologist and surgical pathologist. Topics covered include the normal surgical anatomy of the cardiac chambers, heart valves, and the system for circulation and conduction within the heart. It provides the essential anatomical knowledge required to assess and interpret the malformations, lesions, abnormalities, and positional anomalies discussed and illustrated in detail. Full colour photographs accompany almost all anatomical descriptions.

• First two editions extremely well reviewed
• Written by two of the world’s leading experts in cardiac anatomy
• Superbly illustrated throughout with fully labelled colour photographs and colour line illustrations

Plastic Surgery

Facts
Second edition
Christopher Stone
Royal Devon and Exeter Hospital

This text has been designed specifically to help senior plastic surgery trainees to prepare for and pass their postgraduate examinations in plastic surgery. In addition to the numerous features which made the first edition such a popular revision and summary, the second edition has been extensively updated.

'The format of this book makes easy reading. It is highly recommended for any practitioner who specializes in plastic surgery and may be involved in teaching, or for any practitioner commencing a clinical placement within a plastics operating theatre and seeking detailed information.'

British Journal of Perioperative Nursing
– 2006
– 978 0 521 67449 2 (0 521 67449 2)
Paperback £39.50

Case Presentations in Plastic Surgery
Christopher Stone

This book builds on the success of Plastic Surgery: Facts by the same author. Based on a series of over 100 high quality photographs of ‘classic’ cases, with concise accompanying text, the book provides an introduction to plastic surgery for medical undergraduates, as well as being a valuable revision aid.

– 2004 234 x 156 mm 216pp
– 978 1 841 10137 8 (1 841 10137 0)
Paperback £24.99

The Closed Treatment of Common Fractures

Fourth edition
John Charnley

This core textbook describes the elementary mechanics of reduction and immobilisation and shows how the commonest injuries can be managed by proven methods based on these general principles. It is a must for anyone embarking on a career in orthopaedics and is a classic text for orthopaedic trainees and consultants.

– 2003 246 x 189 mm 288pp
– 978 1 841 10168 2 (1 841 10168 0)
Paperback £22.99

Surgical Critical Care

Vivas
Mazyar Kanani
British Heart Foundation

This book follows the format of the General Pathology Vivas and gives candidates a means of practising some of the most common questions that they will be asked in their viva examinations. This book will help the reader to broaden their knowledge base and gain confidence in their examination technique.

– 2002 186 x 133 mm 246pp

– 978 1 841 10131 6 (1 841 10131 1)
Paperback £19.99

Advanced Examination Techniques in Orthopaedics

Edited by Nick Harris
Edited in association with David Stanley
Foreword by Bernard F. Morrey

This book covers clinical examination in orthopaedics at an advanced level. It adopts a systemic approach, taking each region in turn, and uses bullet points, key information tables, algorithms, summary boxes and clear photographs or line drawings to present information in an easy-to-read way.

– 2002 246 x 189 mm
150 half-tones
– 978 1 841 10073 9 (1 841 10073 0)
Hardback £38.00

Extended Matching Questions for the MRCS

Sunil Auplish and M. K. Hossain-Ibrahim

Practising examination techniques is an essential component of postgraduate medical training. Whilst certain types of examinations, such as MCQs, are already well catered for by many publications, examples of extended matching questions (EMQs), are not widely available. This book is the first of its kind.

– 2001 234 x 156 mm 248pp
– 978 1 841 10062 3 (1 841 10062 5)
Paperback £23.99

Surgical Critical Care

Robert U. Ashford
South Trent Deanery
and T. Neal Evans
Oxford Deanery

Surgical Critical Care has been co-authored by a surgeon and an anaesthetist, and encompasses all aspects of critical care that are important to surgeons, including indications, therapies, drugs, specific conditions and post-operative complications. Each chapter adopts a standardised format for ease of quick reference.

– 2001 234 x 156 mm 256pp
40 line diagrams
– 978 1 841 10066 1 (1 841 10066 8)
Paperback £23.99

QBase Surgery

Volume 2: MCQs in Basic Science for Surgeons

James Green and Saj Wajed

Basic science subjects such as anatomy and applied physiology often present surgeons in training with their most difficult challenge in an MCQ examination situation. This book and CD-ROM package provides 250 MCQs, covering all aspects of basic science that the trainee surgeon will be asked about in their examinations.

Surgery MCQs and EMQs

R. W. Parks
University of Edinburgh
and T. Diamond
Mater Hospital, Belfast

Surgery MCQs and Vivas is designed as a companion to Fundamentals of Surgical Practice, by Aljafri Majid and Andrew Kingsnorth, and is split into two main sections; multiple choice questions and viva topics, reflecting the structure of two of the key components of many postgraduate surgical examinations worldwide.

Medical Management of the Surgical Patient
Fourth edition
Edited by Michael F. Lubin
Emory University, Atlanta
H. Kenneth Walker
Emory University, Atlanta
and Robert B. Smith
Emory University, Atlanta
This comprehensively revised textbook provides an authoritative account of all aspects of perioperative care for surgical patients. All areas of medical disease are discussed with clear recommendations for work up and management in the perioperative period. It will serve as a significant work of reference for internists, anesthesiologists and surgeons.

Cardiology in the Young
Editor-in-Chief: Robert Anderson
University College London
Executive Editor: Edward Baker
Guy’s Hospital, London
Cardiology in the Young is devoted to cardiovascular issues affecting the young and the older patient with the sequel of heart disease acquired in childhood. The journal serves the interests of all professionals concerned with these topics.

All aspects of paediatric cardiology are covered within the journal. The content includes original articles, brief reports, editorials and continuing medical education papers. High quality colour figures are published on a regular basis and occasional supplements are published and supplied free to subscribers.
