CHAPTER 11	Plasticity of crystalline materials <i>Mechanics of plastic continua (by Professor Rodney Hill) – Dislocations in metal crystals (by Professor Sir Nevill Mott) – Taylor's 'Note on the early stages of dislocation theory'</i>	144
CHAPTER 12	Turbulence: a challenge <i>G.I.'s essay for the 1915 Adams Prize – The semi-empirical theories of turbulent transfer – The statistical description of turbulence – Enter Kolmogorov</i>	157
CHAPTER 13	Taylor's foreign peers in mechanics	175
CHAPTER 14	The universal defence consultant during World War II <i>Explosions and blast waves in air (by Professor Harry Jones) – The war at sea and Operation Neptune, – Development of the atomic bomb – G.I. on a more public stage</i>	189
CHAPTER 15	The aftermath of Taylor's war work <i>The beginning of a Taylor 'school'</i>	213
CHAPTER 16	The second golden period 1951–72 <i>Retirement from the Yarrow Research Professorship – The swimming of small creatures – Longitudinal dispersion in flow in tubes – Movement of an interface through narrow passages – The dynamics of thin sheets of liquid – Electrohydrodynamics</i>	222
CHAPTER 17	The closing years	246
CHAPTER 18	The scientific legacy of G.I. Taylor	250
APPENDIX A	An Applied Mathematician's Apology	260
APPENDIX B	G.I. Taylor: Honours	264
APPENDIX C	Articles about G.I. Taylor	267
APPENDIX D	Bibliography of works by G.I. Taylor	268
