Preface vii

Singularities and computation of minimizers for variational problems 1
J. M. Ball

Adaptive finite element methods for flow problems 21
R. Becker, M. Braack & R. Rannacher

Newton's method and some complexity aspects of the zero-finding problem 45
J.-P. Dedieu

Kronecker's smart, little black boxes 69
M. Giusti & J. Heintz

Numerical analysis in Lie groups 105
A. Iserles

Feasibility control in nonlinear optimization 125
M. Marazzi & J. Nocedal

Six lectures on the geometric integration of ODEs 155
R. I. McLachlan & G. R. Quispel

When are integration and discrepancy tractable? 211
E. Novak & H. Woźniakowski

Moving frames — in geometry, algebra, computer vision, and numerical analysis 267
P. J. Olver

Harmonic map flows and image processing 299
G. Sapiro

Statistics from computations 323
H. Sigurgeirsson & A. M. Stuart

Simulation of stochastic processes and applications 345
D. Talay

Real-time numerical solution to Duncan–Mortensen–Zakai equation 361
S.-T. Yau & S. S.-T. Yau
