ROMAN BUILDERS

A STUDY IN ARCHITECTURAL PROCESS

How were the architectural ideas behind great Roman building projects carried out in practice? Roman Builders is the first general-interest book to address this question. Using the Baths of Caracalla, the Pantheon, the Colosseum, and the great temples at Baalbek as physical documents for their own building histories, this book traces the thought processes and logistical considerations – the risks, reversals, compromises, and refinements – that led to ultimate success. Each major phase of the building process is considered: design, groundwork, support structures, complex armatures (such as the superstructures of amphitheaters), vaults, and decorations. New hypotheses are advanced on the raising of monolithic columns, the construction sequence of the Colosseum, and the vaulting of the Pantheon. The illustrations include archival and original photographs, as well as numerous explanatory drawings.

Rabun Taylor is Assistant Professor of History of Art and Architecture at Harvard University. The author of Public Needs and Private Pleasures: Water Distribution, the Tiber River, and the Urban Development of Ancient Rome, he has excavated in Italy and the United States and has contributed articles to many journals, including the Journal of Roman Archaeology, the American Journal of Archaeology, and the Journal of the Society of Architectural Historians.

ILLUSTRATIONS

46 Rome: concrete-and-brick construction method of the imperial period
47 Roman scaffolding with continuous putlogs
48 Rome: Baths of Caracalla, modern restoration of a cross section of a spur wall with visible bonding courses
49 Rome: Baths of Caracalla, niche in west oval room containing bowed arch
50 Baiae: reconstructed interior view of annex of “Temple of Venus”
51 Rome: perspective view of natatio, Baths of Diocletian
52 Stabiae: construction fresco from Villa S. Marco
53 Column drum with lifting bosses
54 Capua: funerary relief depicting treadmill crane lifting column shaft
55 Rome: reconstructed view of frigidarium, Baths of Caracalla
56 Hypothetical tilting mechanism for large column shafts
57 Baalbek: flank of Temple of Dionysus before archaeological intervention
58 Baalbek: reconstructed view of same part of the temple
59 Baalbek: analytical view of roof construction method, Temple of Dionysus
60 Baalbek: facade of Temple of Jupiter with estimated weights of elements
61 Baalbek: corner block of pediment, Temple of Jupiter
62 Rome: perspective plan of frigidarium of Baths of Caracalla with breaks of continuity in masonry
63 Baalbek: contact surfaces of monumental column base and shaft
64 Rome: Baths of Caracalla frigidarium, socket left by robbed entablature block
65 Rome: Basilica of Maxentius, southeast wall exterior
66 Rome: Pantheon, view of facade
67 Rome: Pantheon, elevations as intended and as built
68 Rome: plan of Pantheon porch with three hypothetical phases of column positions
69 Rome: Colosseum, aerial view
70 Rome: analytical cutaway view of Colosseum
71 Rome: Colosseum, axonometric plan depicting raft foundation and radii of curvature
72 Rome: Colosseum, analytical model of infrastructure, Museo della Civiltà Romana
73 Rome: Colosseum, section view after Cozzo
ILLUSTRATIONS

74 Rome: Colosseum, section elevation with author’s numbering system 142
75 Rome: Colosseum, podium of Level 3a and remains of supporting structure seen from inside 143
76 Rome: Colosseum, Cozzo’s proposed construction scheme for upper levels 145
77 Rome: Colosseum, view of the crowning arches and infill of Piers 3–6 at Level 2 146
78 Rome: Colosseum, configuration of blocks between Piers 3 and 6 147
79 Segovia: aqueduct design with cross-braced arches 148
80 Rome: Colosseum, exploded view of the travertine courses forming piers 149
81 Analytical illustration of lewises and two-piece forceps with a hypothetical reconstruction of their use on the tomb of Caecilia Metella near Rome 151
82 Rome: Colosseum, construction of Level 1 153
83 Rome: Colosseum, the facade orders 155
84 Rome: Colosseum, hypothetical string guides for establishing vault dimensions 157
85 Rome: Colosseum, outer ambulatory of Level 2, with visible ribs in the vault 159
86 Rome: Colosseum, construction of Level 2 161
87 Rome: Colosseum, ambulatory of Level 2b 162
88 Rome: Colosseum, inner ambulatory of Level 2a 163
89 Rome: Colosseum, section of Levels 1–3 with typical water-supply scheme 164
90 Rome: Colosseum, stairway of outer corridor of Level 3a 164
91 Rome: Colosseum, interior surface of outer wall from Level 3a to top 165
92 Rome: Colosseum, construction of Level 3 167
93 Rome: Colosseum, view of exterior from the north 168
94 Rome: Colosseum, “flying” staircases of Level 3b 169
95 Rome: Colosseum, inner elevation of Levels 3b and 4 169
96 Rome: Colosseum, construction of Level 4 171
97 Rome: Colosseum, inner surface of attic 173
98 Rome: Baths of Diocletian (now Church of S. Maria degli Angeli), vault of frigidarium 175
99 Nîmes: Pont du Gard 180
100 Nîmes: Pont du Gard, mason’s marks designating sinistra, media, dextra (“left, middle, right”) and I, II, III, III, V 181
ILLUSTRATIONS

101 Rome: relief discovered in the vicinity of the Palazzo della Cancelleria depicting a structure with complex timber roof

102 Nîmes: Pont du Gard, hypothetical centering scheme

103 Nîmes: Pont du Gard, hypothetical centering scheme

104 Rome: Baths of Caracalla, hypothetical centering scheme for vaults with tile lining

105 Rome: Basilica of Maxentius, barrel vault preserving imprint of centering

106 Rome: Tor de’ Schiavi mausoleum, pattern of lagging boards impressed into dome

107 Semicircular centering rib that can be dismantled in stages

108 Rome: Baths of Caracalla, hypothetical centering scheme

109 Rome: Basilica of Maxentius, analytical view of coffered vault

110 Rome: Basilica of Maxentius, fallen fragment of coffered vault revealing construction materials and techniques

111 Rome: Tor de’ Schiavi mausoleum, hypothetical centering scheme

112 Hypothetical tower centering scheme for large domed rotundas

113 Rome: Pantheon, detail of hypothetical centering scheme

114 Rome: Pantheon, hypothetical centering scheme in plan and elevation

115 Rome: Pantheon, author’s proposed centering scheme, analytical view

116 Rome: Pantheon, section view of two phases of author’s proposed centering scheme

117 Rome: Pantheon, base of dome stripped of plaster

118 Rome: Pantheon, first construction phase of dome

119 Rome: Pantheon, analytical cutaway view of vertical construction

120 Rome: Pantheon, second phase of dome construction

121 Barcelona: nave of Antoni Gaudí’s church of the Sagrada Familia

122 Miletos: reconstructed view of terminal aqueduct distribution tank and nymphaeum

123 Boscoreale: decorated bedroom from the Roman luxury villa

124 Rome: tomb of Arruntii near Porta Maggiore

125 Pozzuoli: stuccoed vault at Fondo Caiazzo

126 Pompeii: stuccoed vault in anteroom of apodyterium of men’s baths, Stabian Baths
ILLUSTRATIONS

127 Workers incising lines in plaster 223
128 Rome: plastering divisions of a wall in House of Livia 224
129 Stabiae: Villa Ariana, close-up of decoration and incised guidelines in diaeta 9 225
130 Sens: Roman relief depicting frescoists at work 225
131 Lepcis Magna: Hunting Baths, schematic drawing of mosaic decoration 227
132 Ostia: plan with mosaics of Insula of the Muses 229
133 Vienne, Saint-Romain-en-Gal: hexagon mosaic from House of the Five Mosaics 230
134 Verulamium: portion of a geometric mosaic illustrating flaws in guilloche borders 231
135 Ostia: reconstruction of opus sectile wall decoration of house outside Porta Marina 233
136 Method for applying revetments to walls 234
137 Ostia: House of Cupid and Psyche, opus sectile walls and floor 235
138 Tivoli: Hadrian’s villa, prefabricated modules of opus sectile 235
139 Rome: inscribed marble slab depicting assembly of an opus sectile pattern unit on a temporary table 236
140 Petra: landscape with rock-cut tombs 237
141 Rome: Forum of Trajan, Basilica Ulpia facade; restored elevation of bay of south facade 239
142 Baalbek: Sanctuary of Jupiter Heliopolitanus, restored elevation of propylaea 241
143 Didyma: Sanctuary of Apollo, inscribed template of column compressed vertically by a factor of 16 242
144 Tivoli: Hadrian’s villa, Water Court, plan of excavations with planting pits and drains 246
145 Urbino: inscribed plan of a tomb and garden, with hypothetical reconstruction of site 247
146 Nîmes: Tour Magne 249
147 Mileto: Baths of Faustina, reconstruction of thermal window 250
148 Tivoli: Hadrian’s villa, view of Scenic Canal and Triclinium from north end 251
149 Tivoli: Hadrian’s villa, view from Scenic Triclinium 253
150 Lepcis Magna: reconstructed view of Temple of Jupiter 255
ACKNOWLEDGMENTS

This book was written initially over the course of the summer of 2000. I am grateful to Harvard University for the opportunity to refine my thoughts and their expression over the first half of a sabbatical in the year 2001. I extend special gratitude to James Acker-man and Bettina Bergmann, each of whom offered encouragement and criticism on various parts of the manuscript; to Kathleen Coleman, for her moral support after reading an early draft; to Natalie Taback, who in addition to undertaking the arduous role of a production assistant, offered invaluable advice on the text; and to my summer assistant, Alison Syme, who pitched flawless relief in the late innings. Numerous friends and colleagues offered encouragement at various phases of this project’s development. Of these I feel especially indebted to Lynne Lancaster. She and I maintained a lively and revelatory e-mail dialogue on numerous issues covered in the book, and thanks to her careful attention and genuine engagement this book is a much better effort than it would have been otherwise. Robert Ousterhout’s timely sojourn at Harvard’s Graduate School of Design in 2000 gave us both an opportunity to become acquainted with the other’s work. His course on building methods in antiquity and the Middle Ages sowed the seeds of many thoughts in this book. Thomas Howe of Southwestern University and Donald Hammer of the Minnesota Society of the Archaeological Institute of...
ACKNOWLEDGMENTS

America generously offered me the opportunity to try out some of my central ideas on audiences in March of 2001. The alpha and omega of this book is its senior editor, Beatrice Rehl. She initially suggested the topic to me during a fortuitous convergence in Istanbul in June 1999. Our host to the city’s architectural wonders was Ahmet Çakmak, a humanist who also happens to be a distinguished man of science. To him I owe the awakenings of my interest in structural design; and while my interest is that of an engaged amateur, he gave me reason to believe, when others would not, that the two cultures of science and humanities can be assimilated in interesting and refreshing ways.

My thanks to a number of scholars and institutions for allowing permission to reproduce photos and illustrations: Kathleen Coleman, Janet DeLaine, Katherine Dunbabin, Federico Guidobaldi, Lothar Haselberger, David Jacobson, Lynne Lancaster, Elaine Lancha, Claudio Mocchegiani Carpano, James Packer, Friedrich Rakob, Jürgen Rasch, Eugenia Salza Prina Ricotti, Frank Sear, Fikret Yegül, Cambridge University Press, Centre Jean Bérard, Chrysalis Books, the Deutsches Archäologisches Institut, the Duke University Museum of Art, the École Française de Rome, Edizioni Quasar, Fototeca Unione, the *Journal of Roman Archaeology*, the Metropolitan Museum of Art, the Musei Capitolini, the National Gallery of Art, the Société Nouvelle Libraire Orientaliste Paul Geuthner, the Soprintendenze Archeologiche of Naples, Ostia, and Rome, the University of Chicago Press, and Yale University Press.
