CONTENTS

Preface to the first edition xi

Preface to the second edition xiii

1. Graphs 1

Terminology of graphs and digraphs, Eulerian circuits, Hamiltonian circuits

2. Trees 12

Cayley's theorem, spanning trees and the greedy algorithm, search trees, strong connectivity

3. Colorings of graphs and Ramsey's theorem 24

Brooks' theorem, Ramsey's theorem and Ramsey numbers, the Lóvasz sieve, the Erdős–Szekeres theorem

4. Turán's theorem and extremal graphs 37

Turán's theorem and extremal graph theory

5. Systems of distinct representatives 43

Bipartite graphs, P. Hall's condition, SDRs, König's theorem, Birkhoff's theorem

6. Dilworth's theorem and extremal set theory 53

Partially ordered sets, Dilworth's theorem, Sperner's theorem, symmetric chains, the Erdős–Ko–Rado theorem

7. Flows in networks 61

The Ford–Fulkerson theorem, the integrality theorem, a generalization of Birkhoff's theorem, circulations

8. De Bruijn sequences 71

The number of De Bruijn sequences

9. Two $(0,1,\star)$ problems: addressing for graphs and a hash-coding scheme 77

Quadratic forms, Winkler's theorem, associative block designs

10. The principle of inclusion and exclusion; inversion formulae 89

Inclusion–exclusion, derangements, Euler indicator, Möbius function, Möbius inversion, Burnside's lemma, problème des ménages

11. Permanents 98

Bounds on permanents, Schrijver's proof of the Minc conjecture, Fekete's lemma, permanents of doubly stochastic matrices

12. The Van der Waerden conjecture 110

The early results of Marcus and Newman, London's theorem, Egoritsjev's proof

13. Elementary counting; Stirling numbers 119

Stirling numbers of the first and second kind, Bell numbers, generating functions

14. Recursions and generating functions 129

Elementary recurrences, Catalan numbers, counting of trees, Joyal theory, Lagrange inversion

15. Partitions 152

The function $p_k(n)$, the partition function, Ferrers diagrams, Euler's identity, asymptotics, the Jacobi triple product identity, Young tableaux and the hook formula

16. $(0,1)$-Matrices 169

Matrices with given line sums, counting $(0,1)$-matrices

17. Latin squares 182

Orthogonal arrays, conjugates and isomorphism, partial and incomplete Latin squares, counting Latin squares, the Evans conjecture, the Dinitz conjecture

18. Hadamard matrices, Reed–Muller codes 199

Hadamard matrices and conference matrices, recursive constructions, Paley matrices, Williamson's method, excess of a Hadamard matrix, first order Reed–Muller codes

19. Designs 215

The Erdős–De Bruijn theorem, Steiner systems, balanced incomplete block designs, Hadamard designs, counting, (higher) incidence matrices, the Wilson–Petrenjuk theorem, symmetric designs, projective planes, derived and residual designs, the Bruck–Ryser–Chowla theorem, constructions of Steiner triple systems, write-once memories

20. Codes and designs 244

Terminology of coding theory, the Hamming bound, the Singleton bound, weight enumerators and MacWilliams' theorem, the Assmus–Mattson theorem, symmetry codes, the Golay codes, codes from projective planes

21. Strongly regular graphs and partial geometries 261

The Bose–Mesner algebra, eigenvalues, the integrality condition, quasisymmetric designs, the Krein condition, the absolute bound, uniqueness theorems, partial geometries, examples, directed strongly regular graphs, neighborhood regular graphs

22. Orthogonal Latin squares 283

Pairwise orthogonal Latin squares and nets, Euler's conjecture, the Bose–Parker–Shrikhande theorem, asymptotic existence, orthogonal arrays and transversal designs, difference methods, orthogonal subsquares

23. Projective and combinatorial geometries 303

Projective and affine geometries, duality, Pasch's axiom, Desargues' theorem, combinatorial geometries, geometric lattices, Greene's theorem

24. Gaussian numbers and q-analogues 325

Chains in the lattice of subspaces, q-analogue of Sperner's theorem, interpretation of the coefficients of the Gaussian polynomials, spreads

25. Lattices and Möbius inversion 333

The incidence algebra of a poset, the Möbius function, chromatic polynomial of a graph, Weisner's theorem, complementing permutations of geometric lattices, connected labeled graphs, MDS codes

26. Combinatorial designs and projective geometries 351

Arcs and subplanes in projective planes, blocking sets, quadratic and Hermitian forms, unitals, generalized quadrangles, Möbius planes

27. Difference sets and automorphisms 369

Block's lemma, automorphisms of symmetric designs, Paley–Todd and Stanton–Sprott difference sets, Singer's theorem

28. Difference sets and the group ring 383

The Multiplier Theorem and extensions, homomorphisms and further necessary conditions

29. Codes and symmetric designs 396

The sequence of codes of a symmetric design, Wilbrink's theorem

30. Association schemes 405

Examples, the eigenmatrices and orthogonality relations, formal duality, the distribution vector of a subset, Delsarte's inequalities, polynomial schemes, perfect codes and tight designs

31. (More) algebraic techniques in graph theory 432

Tournaments and the Graham–Pollak theorem, the spectrum of a graph, Hoffman's theorem, Shannon capacity, applications of interlacing and Perron–Frobenius

32. Graph connectivity 451

Vertex connectivity, Menger's theorem, Tutte connectivity

33. Planarity and coloring 459

The chromatic polynomial, Kuratowski's theorem, Euler's formula, the Five Color Theorem, list-colorings

34. Whitney Duality 472

Whitney duality, circuits and cutsets, MacLane's theorem

35. Embeddings of graphs on surfaces 491

Embeddings on arbitrary surfaces, the Ringel–Youngs theorem, the Heawood conjecture, the Edmonds embedding technique

36. Electrical networks and squared squares 507

The matrix-tree theorem, De Bruijn sequences, the network of a squared rectangle, Kirchhoff's theorem

37. Pólya theory of counting 522

The cycle index of a permutation group, counting orbits, weights, necklaces, the symmetric group, Stirling numbers

38. Baranyai's theorem 536
One-factorizations of complete graphs and complete designs

Appendix 1. Hints and comments on problems 542
Hints, suggestions, and comments on the problems in each chapter

Appendix 2. Formal power series 578
Formal power series ring, formal derivatives, inverse functions, residues, the Lagrange–Bürmann formula
