<b>Preface</b>	<b>ix</b>
<b>Introduction</b>	<b>1</b>
<b>1 Sobolev inequalities in <math>\mathbb{R}^n</math></b>	<b>7</b>
1.1 Sobolev inequalities . . . . .	7
1.1.1 Introduction . . . . .	7
1.1.2 The proof due to Gagliardo and to Nirenberg . . . . .	9
1.1.3 $p = 1$ implies $p \geq 1$ . . . . .	10
1.2 Riesz potentials . . . . .	11
1.2.1 Another approach to Sobolev inequalities . . . . .	11
1.2.2 Marcinkiewicz interpolation theorem . . . . .	13
1.2.3 Proof of Sobolev Theorem 1.2.1 . . . . .	16
1.3 Best constants . . . . .	16
1.3.1 The case $p = 1$ : isoperimetry . . . . .	16
1.3.2 A complete proof with best constant for $p = 1$ . . . . .	18
1.3.3 The case $p > 1$ . . . . .	20
1.4 Some other Sobolev inequalities . . . . .	21
1.4.1 The case $p > n$ . . . . .	21
1.4.2 The case $p = n$ . . . . .	24
1.4.3 Higher derivatives . . . . .	26
1.5 Sobolev–Poincaré inequalities on balls . . . . .	29
1.5.1 The Neumann and Dirichlet eigenvalues . . . . .	29
1.5.2 Poincaré inequalities on Euclidean balls . . . . .	30
1.5.3 Sobolev–Poincaré inequalities . . . . .	31
<b>2 Moser’s elliptic Harnack inequality</b>	<b>33</b>
2.1 Elliptic operators in divergence form . . . . .	33
2.1.1 Divergence form . . . . .	33
2.1.2 Uniform ellipticity . . . . .	34
2.1.3 A Sobolev-type inequality for Moser’s iteration . . . . .	37
2.2 Subsolutions and supersolutions . . . . .	38
2.2.1 Subsolutions . . . . .	38
2.2.2 Supersolutions . . . . .	43

2.2.3	An abstract lemma . . . . .	47
2.3	Harnack inequalities and continuity . . . . .	49
2.3.1	Harnack inequalities . . . . .	49
2.3.2	Hölder continuity . . . . .	50
<b>3</b>	<b>Sobolev inequalities on manifolds</b> . . . . .	<b>53</b>
3.1	Introduction . . . . .	53
3.1.1	Notation concerning Riemannian manifolds . . . . .	53
3.1.2	Isoperimetry . . . . .	55
3.1.3	Sobolev inequalities and volume growth . . . . .	57
3.2	Weak and strong Sobolev inequalities . . . . .	60
3.2.1	Examples of weak Sobolev inequalities . . . . .	60
3.2.2	$(S_{r,s}^\theta)$ -inequalities: the parameters $q$ and $\nu$ . . . . .	61
3.2.3	The case $0 < q < \infty$ . . . . .	63
3.2.4	The case $q = \infty$ . . . . .	66
3.2.5	The case $-\infty < q < 0$ . . . . .	68
3.2.6	Increasing $p$ . . . . .	70
3.2.7	Local versions . . . . .	72
3.3	Examples . . . . .	73
3.3.1	Pseudo-Poincaré inequalities . . . . .	73
3.3.2	Pseudo-Poincaré technique: local version . . . . .	75
3.3.3	Lie groups . . . . .	77
3.3.4	Pseudo-Poincaré inequalities on Lie groups . . . . .	79
3.3.5	Ricci $\geq 0$ and maximal volume growth . . . . .	82
3.3.6	Sobolev inequality in precompact regions . . . . .	85
<b>4</b>	<b>Two applications</b> . . . . .	<b>87</b>
4.1	Ultracontractivity . . . . .	87
4.1.1	Nash inequality implies ultracontractivity . . . . .	87
4.1.2	The converse . . . . .	91
4.2	Gaussian heat kernel estimates . . . . .	93
4.2.1	The Gaffney–Davies $L^2$ estimate . . . . .	93
4.2.2	Complex interpolation . . . . .	95
4.2.3	Pointwise Gaussian upper bounds . . . . .	98
4.2.4	On-diagonal lower bounds . . . . .	99
4.3	The Rozenblum–Lieb–Cwikel inequality . . . . .	103
4.3.1	The Schrödinger operator $\Delta - V$ . . . . .	103
4.3.2	The operator $T_V = \Delta^{-1}V$ . . . . .	105
4.3.3	The Birman–Schwinger principle . . . . .	109
<b>5</b>	<b>Parabolic Harnack inequalities</b> . . . . .	<b>111</b>
5.1	Scale-invariant Harnack principle . . . . .	111
5.2	Local Sobolev inequalities . . . . .	113
5.2.1	Local Sobolev inequalities and volume growth . . . . .	113

## CONTENTS

vii

5.2.2	Mean value inequalities for subsolutions . . . . .	119
5.2.3	Localized heat kernel upper bounds . . . . .	122
5.2.4	Time-derivative upper bounds . . . . .	127
5.2.5	Mean value inequalities for supersolutions . . . . .	128
5.3	Poincaré inequalities . . . . .	130
5.3.1	Poincaré inequality and Sobolev inequality . . . . .	131
5.3.2	Some weighted Poincaré inequalities . . . . .	133
5.3.3	Whitney-type coverings . . . . .	135
5.3.4	A maximal inequality and an application . . . . .	139
5.3.5	End of the proof of Theorem 5.3.4 . . . . .	141
5.4	Harnack inequalities and applications . . . . .	143
5.4.1	An inequality for $\log u$ . . . . .	143
5.4.2	Harnack inequality for positive supersolutions . . . . .	145
5.4.3	Harnack inequalities for positive solutions . . . . .	146
5.4.4	Hölder continuity . . . . .	149
5.4.5	Liouville theorems . . . . .	151
5.4.6	Heat kernel lower bounds . . . . .	152
5.4.7	Two-sided heat kernel bounds . . . . .	154
5.5	The parabolic Harnack principle . . . . .	155
5.5.1	Poincaré, doubling, and Harnack . . . . .	157
5.5.2	Stochastic completeness . . . . .	161
5.5.3	Local Sobolev inequalities and the heat equation . . . . .	164
5.5.4	Selected applications of Theorem 5.5.1. . . . .	168
5.6	Examples . . . . .	172
5.6.1	Unimodular Lie groups . . . . .	172
5.6.2	Homogeneous spaces . . . . .	175
5.6.3	Manifolds with Ricci curvature bounded below . . . . .	176
5.7	Concluding remarks . . . . .	180
