

# Contents

<b>Preface</b>	<b>xi</b>
<b>1. Introduction</b>	<b>1</b>
1.1. Conditioning: an intuitive first look . . . . .	1
1.2. Sharpening our intuition . . . . .	18
1.3. Probability as Pure Maths . . . . .	23
1.4. Probability as Applied Maths . . . . .	25
1.5. First remarks on Statistics . . . . .	26
1.6. Use of Computers . . . . .	31
<b>2. Events and Probabilities</b>	<b>35</b>
2.1. Possible outcome $\omega$ , actual outcome $\omega^{\text{act}}$ ; and Events . . . . .	36
2.2. Probabilities . . . . .	39
2.3. Probability and Measure . . . . .	42
<b>3. Random Variables, Means and Variances</b>	<b>47</b>
3.1. Random Variables . . . . .	47
3.2. DFs, pmfs and pdfs . . . . .	50
3.3. Means in the case when $\Omega$ is finite . . . . .	56
3.4. Means in general . . . . .	59
3.5. Variances and Covariances . . . . .	65

viii

<b>4. Conditioning and Independence</b>	<b>73</b>
4.1. Conditional probabilities . . . . .	73
4.2. Independence . . . . .	96
4.3. Laws of large numbers . . . . .	103
4.4. Random Walks: a first look . . . . .	116
4.5. A simple ‘strong Markov principle’ . . . . .	127
4.6. Simulation of IID sequences . . . . .	130
<b>5. Generating Functions; and the Central Limit Theorem</b>	<b>141</b>
5.1. General comments on the use of Generating Functions (GFs) . . . . .	142
5.2. Probability generating functions (pgfs) . . . . .	143
5.3. Moment Generating Functions (MGFs) . . . . .	146
5.4. The Central Limit Theorem (CLT) . . . . .	156
5.5. Characteristic Functions (CFs) . . . . .	166
<b>6. Confidence Intervals for one-parameter models</b>	<b>169</b>
6.1. Introduction . . . . .	169
6.2. Some commonsense Frequentist CIs . . . . .	173
6.3. Likelihood; sufficiency; exponential family . . . . .	181
6.4. Brief notes on Point Estimation . . . . .	187
6.5. Maximum-Likelihood Estimators (MLEs) and associated CIs . . .	192
6.6. Bayesian Confidence Intervals . . . . .	199
6.7. Hypothesis Testing – if you must . . . . .	222

<b>7. Conditional pdfs and multi-parameter Bayesian Statistics</b>	<b>240</b>
7.1. Joint and conditional pmfs . . . . .	240
7.2. Jacobians . . . . .	243
7.3. Joint pdfs; transformations . . . . .	246
7.4. Conditional pdfs . . . . .	258
7.5. Multi-parameter Bayesian Statistics . . . . .	265
<b>8. Linear Models, ANOVA, etc</b>	<b>283</b>
8.1. Overview and motivation . . . . .	283
8.2. The Orthonormality Principle and the F-test . . . . .	295
8.3. Five basic models: the Mathematics . . . . .	304
8.4. Goodness of fit; robustness; hierarchical models . . . . .	339
8.5. Multivariate Normal (MVN) Distributions . . . . .	365
<b>9. Some further Probability</b>	<b>383</b>
9.1. Conditional Expectation . . . . .	385
9.2. Martingales . . . . .	406
9.3. Poisson Processes (PPs) . . . . .	426
<b>10. Quantum Probability and Quantum Computing</b>	<b>440</b>
10.1. Quantum Computing: a first look . . . . .	441
10.2. Foundations of Quantum Probability . . . . .	448
10.3. Quantum computing: a closer look . . . . .	463
10.4. Spin and Entanglement . . . . .	472
10.5. Spin and the Dirac equation . . . . .	485
10.6. Epilogue . . . . .	491

<b>Appendix A. Some Prerequisites and Addenda</b>	<b>495</b>
Appendix A1. ‘O’ notation . . . . .	495
Appendix A2. Results of ‘Taylor’ type . . . . .	495
Appendix A3. ‘o’ notation . . . . .	496
Appendix A4. Countable and uncountable sets . . . . .	496
Appendix A5. The Axiom of Choice . . . . .	498
Appendix A6. A non-Borel subset of $[0, 1]$ . . . . .	499
Appendix A7. Static variables in ‘C’ . . . . .	499
Appendix A8. A ‘non-uniqueness’ example for moments . . . . .	500
Appendix A9. Proof of a ‘Two-Envelopes’ result . . . . .	500
<b>Appendix B. Discussion of some Selected Exercises</b>	<b>502</b>
<b>Appendix C. Tables</b>	<b>514</b>
Table of the normal distribution function . . . . .	515
Upper percentage points for $t$ . . . . .	516
Upper percentage points for $\chi^2$ . . . . .	517
Upper 5% percentage points for $F$ . . . . .	518
<b>Appendix D. A small Sample of the Literature</b>	<b>519</b>
<b>Bibliography</b>	<b>525</b>
<b>Index</b>	<b>539</b>
