A
active actors, 5
activity diagrams, 25–30
branching in, 26
in bridge process, 60–62, 67, 69
constraints in, 26–27
in distribution case study, 220–223
looping in, 27–28, 62
in math tutor case study, 196–197
notation in, 25, 62, 104
in reservations online case study, 90–95, 104–108
in robot arm simulation case study, 177–180
of simultaneous states, 27–30
in web page maker case study, 137–141, 149–156
actors, 3
active vs. passive, 5
communication relation of, 11–12
in distribution case study, 213
generalization among, 5–7
glossaries of, 58, 86, 133
identifying, 56–57
names of, 65 (see also name selection)
in reservations online case study, 84–85
stick-person notation for, 3–4
in web page maker case study, 131–132, 133
aggregation associations, 35
aggregations, 35–36, 38, 74–75
algorithm design, 78–79
alternative scenarios, 23–25 (see also secondary scenarios)
analysis phase, 48–49 (see also user requirements)
architecture, 45
in distribution case study, 225
examples of, 45–47
in math tutor case study, 199–200
physical, 128–129
in reservations online case study, 101–103, 111–113, 124–125, 128–129
in robot arm simulation case study, 182–183
subsystem analysis and, 66–67
traceability models and, 70, 77–78
in web page maker case study, 147–148, 154–156, 165
associations, 34–35
aggregations, 35–36, 38, 74–75
communicate relationship, 11–12
in construction phase, 72–74
in domain analysis, 65
in reservations online case study, 97–100, 108–110
in web page maker case study, 143–146, 153–154

243
ATM machine software, 12, 43–45
attributes, 30
classes with, 32
in construction phase, 72–74
in domain analysis, 66
in reservations online case study, 100–101
in web page maker case study, 146–147

B
banking system exercise, 239–240
bank machine software, 12, 43–45
boat purchase example, 9
bookstore inventory system, 10–12, 41–44
branching, in activity diagrams, 26
bridge process, 48–79
activity diagrams in, 25–30, 62
construction subphase 1, 70–78
construction subphase 2, 78–79
deliverables from, 51, 53–54, 59, 63
domain analysis in, 63–66
elaboration phase in, 49, 50–52, 58–70
glossaries in, 58
inception phase, 49, 50–52, 53–58
interfaces in, 45, 63
overview of, 50–53
primary scenarios in, 61
requirements analysis in, 59–63
secondary scenarios in, 62
subsystem analysis in, 66–67
traceability in, 67–70, 77–78
use case model in, 56–58, 62–63
user requirements in, 48–49, 53–54, 55–56

C
car rental software, 5, 31, 237–238
CGI interface, 143, 149
chat system software (see online chat system software)
classes, 30
actors and, 3
aggregations, 35–36
associations, 34–35
with attributes, 32
database, 121–123
data structure, 120
examples of, 31, 38–40
generalization relation, 36–40
with operations, 32–33
ordinary, 156
parameterized, 33–34
self-association of, 35
subsystems of, 45
template for, 31
collaboration diagrams, 42–45
in bridge process, 42–45, 71, 76–77
design from, 76–77
distribution case study, 228–232
in math tutor case study, 203, 205
in reservations online case study, 114–120
in robot arm simulation case study, 185–188
in web page maker case study, 158–163
combination, inheritance and, 37
communicate relationship, 11–12 (see also associations)
computer board game software, 16–17
counter system, activity diagram for, 30
constraints, 26–27, 83–84
construction phase, 70–78 (see also implementation phase)
algorithm design, 78–79
in bridge process, 49, 50–52, 70–78
detailed object design, 71–77, 120–124, 188–189, 205–206, 233
in distribution case study, 227–233
dynamic modeling in, 71 (see also dynamic modeling)
in math tutor case study, 201–206
nonfunctional requirements in, 75–76
object implementation, 78 (see also implementation phase)
in online reservations case study, 113–124
in robot arm simulation case study, 184–188
traceability in, 77–78 (see also traceability)
user cases in, 70–71 (see also use case models)
in web page maker case study, 157–166
consulting company subsystem model, 46–47
customer contact information, 209–210, 216, 221, 229

data fields, 32
deliverables of bridge process, 51, 53
of domain analysis, 63
of the elaboration phase, 59
of the inception phase, 54
deployment, 128–129
design phase, 50–52 (see also construction phase)
algorithm design, 78–79
in bridge process, 49, 50–52
distribution case study, 233
in domain analysis, 63–66
in math tutor case study, 205–206
Index

E
elaboration phase, 58–70
in bridge process, 49, 50–52, 58–70
in distribution case study, 213-226
domain analysis in, 63–66
in math tutor case study, 194–200
requirements analysis in, 59–63
in reservations online case study,
87–113
in robot arm simulation case study, 175–183
subsystem analysis in, 66–67
traceability in, 67–70
in web page maker case study, 133–156
end states, 25
error messages, 23–24
in distribution case study, 220
in reservations online case study, 89–90
in robot arm simulation case study, 177
in web page maker case study, 136–137
extend relationship, 9–10, 15–16
F
financial market persons model, 38
finishing simultaneously, 30
flight reservation system software, 35–36
football world exercise, 238
G
GDP software, 125, 127
generalization
among actors, 5–7
between classes, 36–40
joke-teller software example, 38, 40
school data base example, 38–39
template for, 37
glossaries, 58
of actors, 58, 86, 133
of classes, 112
of subsystems, 102, 148, 156, 182, 199
of technical terms, 173
goods distribution case study (see distribution case study)
H
Help activity, 175, 177–178, 185
home page creation (see web page maker case study)
hotel reservation exercise, 239
HTML interface, 143, 148–149
I
if statements, 21–22
implementation phase, 49, 52, 78
inheritance and, 37
in math tutor case study, 206–207
in reservations online case study, 124–129
in robot arm simulation case study,
188-191

inception phase, 53–58
in bridge process, 49, 50–52, 53–58
in distribution case study, 209–213
in math tutor case study, 193–194
in reservations online case study, 83–84
in robot arm simulation case study, 172–175
in web page maker case study, 130–133
inheritance
extend relationship and, 10
generalization and, 5, 36–40
in object model, 72

245
246

insurance company exercise, 236–237
interfaces
architecture of, 45
in bridge process, 45, 63
CGI, 143, 149
HTML, 143, 148–149
in reservations online case study, 125–126
in use case models, 17–19, 63
user, 18

interior designer software, 12, 14
“invalid password”, 24
“is” verb, 144
iteration, 26, 40, 49–51

J
job recruitment exercise, 238–239
joke-teller system, 38, 40

L
library system software, 31–34, 238
looping, 22–23, 27–28, 62

M
many-to-many associations, 35–36, 73–74
mapping
in distribution case study, 226
in math tutor case study, 200
in reservations online case study, 109–111
in robot arm case study, 183
in web page maker case study, 153–155
math tutor case study, 192–207
architecture, 199–200
domain analysis, 197–199
implementation, 206–207
requirements analysis, 194–197
sequence and collaboration diagrams, 202–205
traceability, 200
use case model, 194, 201–202
user requirements, 193–194
message passing notation, 40
message returns, 40–41
methods, 30, 32–33

military officer’s organization software, 20–24
“missing data” scenario, 24
music player software, 12, 13

N
name selection
in bridge process, 65
in reservations online case study, 84–85, 96–97

in web page maker case study, 131, 142–143

notation
in activity diagrams, 25, 62, 104
in sequence diagrams, 39–40
of states, 23
stick-person, 3–4
in traceability models, 68
“not registered” scenario, 24

O
object implementation, 78
object models
in bridge process, 53, 63–66, 69, 77
