<i>Preface</i>	<i>page</i> xiii
I Introduction	1
1.1 Objectives	1
1.2 Why study environmental applications?	1
1.3 Background	2
1.4 Pollution sources	4
1.5 Environmental separations	5
1.6 Historic perspective of environmental pollution	8
1.7 The sulfur problem: where separations can help	10
1.8 Remember	11
1.9 Questions	11
2 Separations as unit operations	13
2.1 Objectives	13
2.2 Unit operations	14
2.3 Separation mechanisms	15
2.4 Equilibrium-based processes	17
2.5 Rate-based processes	18
2.6 Countercurrent operation	19
2.7 Productivity and selectivity	20
2.8 Separating agents	23

Contents

2.9	Reversible chemical complexation	26
2.10	Selection of a separation process	28
2.11	A unified view of separations	30
2.12	Remember	30
2.13	Questions	31
2.14	Problems	32
3	Separations analysis fundamentals	34
3.1	Objectives	34
3.2	Basic description of mass balances	35
3.3	Degrees of freedom analysis	38
3.4	Phase equilibrium	42
3.5	Equilibrium-limited analysis	55
3.6	Binary feed mixtures	65
3.7	Minimum number of stages	71
3.8	Rate-limited processes	74
3.9	Remember	81
3.10	Questions	81
3.11	Problems	81
4	Distillation	86
4.1	Objectives	86
4.2	Background	87
4.3	Batch distillation	88
4.4	Continuous distillation	91
4.5	Remember	116
4.6	Questions	117
4.7	Nomenclature	119
4.8	Problems	119
5	Extraction	120
5.1	Objectives	120
5.2	Background	120
5.3	Environmental applications	122

Contents

5.4	Definition of extraction terms	122
5.5	Extraction equipment	123
5.6	Leaching processes	127
5.7	Minimum solvent flowrate	136
5.8	Countercurrent extraction with feed at intermediate stage	139
5.9	Minimum and total reflux	143
5.10	Immiscible extraction: McCabe–Thiele analysis	145
5.11	More extraction-related examples	148
5.12	Remember	152
5.13	Questions	153
5.14	Problems	153
6	Absorption and stripping	156
6.1	Objectives	156
6.2	Background	156
6.3	Column diameter	158
6.4	McCabe–Thiele analysis: absorption	161
6.5	McCabe–Thiele analysis: stripping	166
6.6	Packed columns	169
6.7	Remember	180
6.8	Questions	180
6.9	Problems	181
7	Adsorption	182
7.1	Objectives	182
7.2	Background	182
7.3	Adsorption principles	184
7.4	Sorbent selection	185
7.5	Various sorbents	187
7.6	Sorbent regeneration	191
7.7	Transport processes	194
7.8	Process design factors	196
7.9	Evaluating the adsorption process	203

Contents

7.10	Design of fixed-bed adsorption columns	207
7.11	Remember	212
7.12	Questions	213
7.13	Problems	213
8	Ion exchange	214
8.1	Objectives	214
8.2	Background	214
8.3	Environmental applications	215
8.4	Ion-exchange mechanisms	215
8.5	Ion-exchange media	217
8.6	Equilibria	224
8.7	Equipment and design procedures	226
8.8	Remember	232
8.9	Questions	233
8.10	Problems	233
9	Membranes	234
9.1	Objectives	234
9.2	Membrane definition	234
9.3	Pluses and minuses for membrane processes	236
9.4	Environmental applications	237
9.5	Basic parameters and separation mechanisms	238
9.6	Dense membranes	238
9.7	Porous membranes	241
9.8	Membrane configurations	244
9.9	Membrane processes	246
9.10	Factors that reduce membrane performance	266
9.11	Effect of concentration polarization on membrane performance	269
9.12	Geomembranes	272
9.13	Remember	273
9.14	Questions	274
9.15	Problems	274

Cambridge University Press

0521010144 - Principles of Chemical Separations with Environmental Applications

Richard D. Noble and Patricia A. Terry

Table of Contents

[More information](#)

Contents

Appendix A	Dimensionless numbers	276
Appendix B	Mass transfer coefficient correlations	282
Appendix C	Pulse analysis	287
Appendix D	Finite difference approach	303
Appendix E	Bibliography of chemical separations and related physical properties	310
	<i>References</i>	314
	<i>Index</i>	319
