

TABLE OF CONTENTS

Contributors	x
Introduction <i>Ray d'Inverno</i>	xiii
Preface <i>C. J. S. Clarke</i>	xv
PART A. THEORETICAL APPROACHES	1
Numerical relativity on a transputer array <i>Ray d'Inverno</i>	3
Some aspects of the characteristic initial value problem in numerical relativity <i>Nigel Bishop</i>	20
The characteristic initial value problem in general relativity <i>J. M. Stewart</i>	34
Algebraic approach to the characteristic initial value problem in general relativity <i>Jörg Frauendiener</i>	41
On hyperboloidal hypersurfaces <i>Helmut Friedrich</i>	50
The initial value problem on null cones <i>J. A. Vickers</i>	59
Introduction to dual-null dynamics <i>S. A. Hayward</i>	69
On colliding plane wave space-times <i>J. B. Griffiths</i>	79
Boundary conditions for the momentum constraint <i>Niall Ó Murchadha</i>	83

viii	Contents	
	On the choice of matter model in general relativity	94
	<i>A. D. Rendall</i>	
	A mathematical approach to numerical relativity	103
	<i>J. W. Barrett</i>	
	Making sense of the effects of rotation in general relativity	114
	<i>J. C. Miller</i>	
	Stability of charged boson stars and catastrophe theory	130
	<i>Franz E. Schunck, Fjodor V. Kusmartsev and Eckehard W. Mielke</i>	
	PART B. PRACTICAL APPROACHES	141
	Numerical asymptotics	143
	<i>R. Gómez and J. Winicour</i>	
	Instabilities in rapidly rotating polytropes	163
	<i>Scott C. Smith and Joan M. Centrella</i>	
	Gravitational radiation from coalescing binary neutron stars	182
	<i>Ken-Ichi Oohara and Takashi Nakamura</i>	
	“Critical” behaviour in massless scalar field collapse	202
	<i>M. W. Choptuik</i>	
	Godonov-type methods applied to general relativistic stellar collapse	223
	<i>José M^a. Ibáñez, José M^a. Martí, Juan A. Miralles and J.V. Romero</i>	
	Astrophysical sources of gravitational waves and neutrinos	230
	<i>Silvano Bonazzola, Eric Gourgoulhon, Pawel Haensel and Jean-Alain Marck</i>	
	Gravitational radiation from 3D gravitational stellar core collapse	247
	<i>Jean-Alain Marck and Silvano Bonazzola</i>	
	A vacuum fully relativistic 3D numerical code	258
	<i>C. Bona and J. Massó</i>	
	Solution of elliptic equations in numerical relativity using multiquadrics	265
	<i>M. R. Dubal, S. R. Oliveira and R. A. Matzner</i>	

Self-gravitating thin discs around rotating black holes	281
<i>A. Lanza</i>	
An ADI scheme for a black hole problem	292
<i>Gabrielle D. Allen and Bernard F. Schutz</i>	
Time-symmetric ADI and causal reconnection	297
<i>Miguel Alcubierre and Bernard F. Schutz</i>	
The numerical study of topological defects	308
<i>E. P. S. Shellard</i>	
Computations of bubble growth during the cosmological quark-hadron transition	335
<i>J. C. Miller and O. Pantano</i>	
Initial data of axisymmetric gravitational waves with a cosmological constant	345
<i>Ken-Ichi Nakao, Kei-Ichi Maeda, Takashi Nakamura and Ken-Ichi Oohara</i>	
PANEL DISCUSSION	353
