CONTENTS

	Preface	vii
1	Introduction to brain research	1
2	Evolution of the nervous system	3
	Vertebrate evolution	3
	Nervous system evolution	9
	Nervous system development	9
	Principles of neural construction	19
3	Fine structure of the nervous system	28
	Cellular construction	28
	Contact versus continuity between nerve	
	cells	29
	The neuron	31
	The axon and its functional significance	34
	Fundamental organisation of the nervous	
	system	36
	Regeneration of neural tissue	37
	Ageing – an important social problem of	
	our time	39
4	The nature and transmission of the	
	nervous impulse	43
	The bioelectric current – basis for signal	
	transmission	43
	Nerve cell metabolism	45
	Saltatory conduction	45
	Nerve impulses and brain waves	46
	The electroencephalograph (EEG)	47
	Sleep and its relation to the reticular	
	function	48
	Synapses	50
5	Glia, cerebral blood vessels and neurons	56
	Physiological significance of the blood-	
	brain barrier	59
	The origin and distribution of microglia	60
	Function of microglia in the normal brain	62
	Innervation of cerebral vessels and blood	
	flow	63
	Ultrastructure of neuroglia	63
	Quantitative data	63
	Functional considerations in relation to	
	morphology	65
	Chemical composition of the brain	66

PREFACE

Teaching in Cambridge proved to be refreshing and stimulated my wish to write a new version of my earlier book, *Das menschliche Gehirn* (Hippokrates Verlag Stuttgart, 1968), drawing upon my experience and accumulated teaching material. This new book attempts, as did an earlier one (*Experimental Neurology*, Clarendon Press, Oxford, 1961), a combination of morphological data with physiological and neurological studies.

Being primarily a morphologist rooted in the concept of the evolution of structure I have placed the emphasis on structural organisation, but functional aspects, experimental research and clinical findings have been incorporated, broadening the interest for clinical students and for students of neurobiology.

I wish to thank Professor R. J. Harrison, FRS for his offer of a base in his department from which I could take part in departmental teaching and continue my research, supported by the Deutsche Forschungsgemeinschaft; and Dr J. Herbert, Fellow of Gonville and Caius College, and Professor W. J. Macpherson, President of the College, for making me an Associate Member of the College, enabling me to teach some of their medical students. I also wish to thank students from Gonville and Caius College, in particular Pak-Lee Chau, David Evans, Diane Hopper, John Williams and Kwong-Wai Man for their help in various ways. My thanks to Petra Schuba for her great illustrative skill, to Mrs F. Glees for her secretarial help, to Tim Crane and Dennis McBrearty for their expert technical assistance and to Herr G. Koch, Gesellschaft für wissenschaftliche Datenverarbeitung, Göttingen, for help with the index. I am indebted to the staff of Cambridge University Press, for their patience and linguistic support during the preparation of this book.

Cambridge, 1987
