Editor's note <i>Antoine Duquennoy & Michel Mayor</i>	ix
Introductory Remarks <i>David W. Latham</i>	1
N-body simulations of primordial binaries and tidal capture in open clusters <i>Sverre J. Aarseth</i>	6
When and how can binary data test stellar models <i>Johannes Anderson & Birgitta Nordström</i>	18
Statistical analysis of single-lined red giant spectroscopic binaries <i>Henri M.J. Boffin, Guy Paulus & Nicolas Cerf</i>	26
The formation of binary stars <i>Cathy Clarke</i>	38
Distribution and evolution of orbital elements for 1 M _☉ primaries <i>Antoine Duquennoy, Michel Mayor & Jean-Claude Mermilliod</i>	52
Tidal circularization of short period binaries <i>Itzhak Goldman & Tsevi Mazeh</i>	82
Composite-spectrum binaries <i>Elizabeth M. Griffin</i>	93
Orbital elements for field late-type binaries <i>Roger F. Griffin</i>	96
Evidences for interaction among wide binary systems: To Ba or not to Ba? <i>Alain Jorissen & Henri M.J. Boffin</i>	110
Spectroscopic binaries in the open cluster M67 <i>David Latham, Robert D. Mathieu, Alejandra A. E. Milone & Robert J. Davis</i>	132
Spectroscopic binaries in the halo <i>David Latham, Tsevi Mazeh, Guillermo Torres, Bruce W. Carney, Robert P. Stefanik & Robert J. Davis</i>	139
Eccentricity evolution of a binary embedded in a disk <i>Stephen H. Lubow & Pawel Artymowicz</i>	145

The eccentricity distribution of pre-main sequence binaries <i>Robert D. Mathieu</i>	155
A new algorithm to derive the mass-ratio distribution of spectroscopic binaries <i>Tsevi Mazeh & Dorit Goldberg</i>	170
Distribution of orbital elements for red giant spectroscopic binaries in open clusters <i>Jean-Claude Mermilliod & Michel Mayor</i>	183
Are barium dwarfs progenitors of barium giants <i>Pierre North & Antoine Duquennoy</i>	202
RZ Eridani as a constraint on synchronization and circularization times <i>Pierre North, Gilbert Burki & Zdenek Kviz</i>	217
Ekman layers and tidal synchronization of binary stars <i>Michel Rieutord</i>	229
The distribution of mass ratio in late-type main-sequence binary system <i>Andrei A. Tokovinin</i>	230
The dynamical evolution of G-type main sequence binaries <i>Frans Van't Veer & Carla Maceroni</i>	237
Present state of the tidal theory <i>Jean-Paul Zahn</i>	253
Infrared companions: Clues to binary star formation <i>Hans Zinnecker & Bruce A. Wilking</i>	269
The distribution of cutoff periods with age: An observational constraint on tidal circularization theory <i>Robert D. Mathieu, Antoine Duquennoy, David W. Latham, Michel Mayor, Tsevi Mazeh & Jean-Claude Mermilliod</i>	278
Concluding remarks <i>Roger F. Griffin</i>	291
