Preface	vii
Nomenclature list	ix
1 Tribology	1
1.1 Definitions of common tribological terms	1
1.2 Frictional behaviour of materials	9
1.3 Lubrication between surfaces in relative motion	19
1.4 The wear of sliding and rolling surfaces	22
1.5 Concluding remarks on the relevance of physical analytical techniques for tribology	34
2 Macroscopic physical techniques	35
2.1 Optical microscopy and optical interferometry	35
2.2 Transmission electron microscopy of replicas of surfaces	50
2.3 Profilometry and scanning electron microscopy (SEM)	56
2.4 Electrical capacitance and resistance	64
2.5 Magnetic perturbation techniques	67
2.6 Macroscopic techniques for monitoring oil-lubricated machinery (with special emphasis on 'ferrography')	77
2.7 Concluding remarks regarding the importance of macroscopic physical techniques to tribology	80
3 Microscopic physical techniques for studying atomic arrangement	82
3.1 Basic crystallography	82
3.2 X-ray diffraction techniques	98
3.3 Electron diffraction methods	123
3.4 Concluding remarks regarding the importance of microscopic techniques for studying the atomic arrangements in tribo-elements	146
4 Microscopic techniques for studying atomic structure	148
4.1 Optical spectra	148
4.2 X-ray spectra	153
4.3 Electron probe microanalysis	166
4.4 X-ray photoelectron spectroscopy	175
4.5 Auger electron spectroscopy	190
4.6 Other microscopic techniques	200
4.7 Concluding remarks	201

Contents

5	The analysis of lubricant films	202
5.1	The analysis of extreme-pressure lubricant films formed in the presence of typical disulphide additives	202
5.2	The analysis of solid lubricant films formed when lamellar solids slide against metals and alloys	224
5.3	The application of physical methods of analysis to the measurement of lubricant film thickness	259
5.4	The analysis of surface films formed in the presence of anti-wear additives	275
6	The analysis of surface temperatures in tribo-systems	291
6.1	The thermal aspects of sliding	291
6.2	The crystallographic changes caused by ‘hot-spot’ temperatures during sliding wear	313
6.3	Direct measurement of surface temperatures	338
6.4	Concluding remarks on the relevance of physical analytical techniques for analysing surface temperatures in tribo-systems	358
7	The analysis of pitting failures in tribo-systems	360
7.1	Failure in rolling contact bearings in nominal point contact	360
7.2	Basic research into the contact fatigue of ball-bearings	363
7.3	Failures in gears and other tribo-systems in nominal line contact	365
7.4	Basic research on the pitting of discs	368
7.5	Physical analysis of contact fatigue pitting in tribo-systems	376
7.6	The current position in contact fatigue pitting failures	397
8	The analysis of oxidative wear in tribo-systems	399
8.1	Introduction	399
8.2	The oxidative wear of a typical low-alloy steel tribo-system	400
8.3	The oxidative wear of the high-chromium ferritic steel/austenitic stainless steel tribo-system	408
8.4	The oxidative wear of 316 stainless steel tribo-systems	417
8.5	Concluding remarks	431
9	The application of physical techniques to selected ceramic tribo-systems	432
9.1	Introduction	432
9.2	Silicon nitride tribo-systems	432
9.3	Silicon carbide tribo-systems	439
9.4	Sapphire tribo-systems	446
9.5	Concluding remarks on the application of physical techniques to ceramic tribo-systems	456
	References	458
	Index	477
