<i>List of figures</i>	<i>page</i>	vii
<i>Preface</i>		xi
<i>Acknowledgements</i>		xiii
<b>1</b>	<b>Social sciences and planning</b>	<b>1</b>
1.1	Natural and social sciences: the hypothesis of convergence	1
1.2	The scientific method	4
1.3	Social phenomena and social objective knowledge	6
1.4	Social scientists and planners	9
1.5	Some basic concepts about models	11
1.6	Model dynamics	15
1.7	Conclusions	18
<b>2</b>	<b>Micro-economic theories of land use</b>	<b>20</b>
2.1	Von Thünen's isolated state	21
2.2	Calculating Von Thünen's basic model	24
2.3	Extending Von Thünen's model through elasticities	25
2.4	Wingo's transportation and land use model	32
2.5	Alonso's location and land use model	36
2.6	Multiple market areas: the models of Christaller and Lösch	42
2.7	Some conclusions about micro-economic models	45
<b>3</b>	<b>Spatial interaction models</b>	<b>48</b>
3.1	Origins and development of spatial interaction models	48
3.2	Basic concepts	49
3.3	The entropy maximising derivation	50
3.4	Some specific forms of spatial interaction models	55
3.5	Micro-economic and spatial interaction models compared	59
<b>4</b>	<b>Random utility theory and discrete choice models</b>	<b>65</b>
4.1	Decision theory: the individual case	66
4.2	Decision theory: the aggregate case	67

vi	<i>Contents</i>	
	4.3 Some properties of discrete choice models	73
	4.4 Decision chains	78
	4.5 Variable costs and elasticities	80
	4.6 Hierarchies	81
5	Spatial accounting models	82
	5.1 The theory of production and the multiplier	82
	5.2 The regional income model and the economic base method	85
	5.3 The input–output model	87
	5.4 A random utility based multi-region input–output model	92
	5.5 Conclusions	99
6	Urban and regional activity allocation	100
	6.1 General urban–regional dynamics	100
	6.2 The activity system	102
	6.3 The dynamic relationship between floorspace supply and the activity system	105
	6.4 Migration between regions	110
	6.5 Spatial hierarchies	112
	6.6 Conclusions	113
7	The transportation system	114
	7.1 The linked land use and transport model	115
	7.2 The integrated land use and transport model	117
	7.3 Network analysis for transportation systems	119
	7.4 Capacity restriction	128
	7.5 Trip generation	129
	7.6 Modal split	131
	7.7 Route assignment	132
	7.8 Composite costs and consumers' surplus	140
	7.9 Conclusions	141
8	Applications of TRANUS, an integrated land use and transport model	143
	8.1 Brief description of the TRANUS system	143
	8.2 Urban land use planning applications	150
	8.3 Urban transportation planning applications	154
	8.4 Regional transportation applications	157
	8.5 Land use and transport energy consumption	163
	<i>Appendix: Computer programs</i>	168
	<i>References</i>	170
	<i>Index</i>	175
