 - zero-one matrices and, 69–73
- See also Matrix calculus*

Determinants, 81–83

- derivatives and, 81
- logs of, 81–83
- rules for, 86
- scalar functions, 81, 82

Devec operators, 188

- definition of, 10–11
- generalized. *See Generalized devec operator*
- Kronecker products and, 11–12
- matrix algebra of, 10–14
- notation and, 21
- traces and, 12
- transpose operator and, 22
- vec operator and, 10–14, 22

Differentiation. *See Derivatives, Matrix calculus*Disturbances. *See specific models*

Duplication matrices, xi, 28, 110

- defined, 43–44
- vech and, 43–44
- zero-one matrices and, 28, 43–44

E

Econometrics, 5–6

- classical procedures and, xi, 1
 - differentiation and, 67
 - information matrix for, 5–6
 - LMT statistic and, 4
 - log-likelihood function, 6
 - LSE model and, 174
 - nonlinear equations, 1
 - partial derivatives, 5
 - test statistics and, 1
- See also specific models*

Elimination matrices, xi, 110

- defined, 43
- zero-one matrices and, 14, 28, 43

F*F* test, 129, 183FIML. *See Full information**maximum-likelihood (FIML) estimator*

Forward-shift matrices, 28, 58–59

Full information maximum-likelihood (FIML) estimator, 155–157, 182

G

Gauss–Markov assumptions, 129

Generalized devec operators 15–16

- commutation matrix and, 29–43, 77, 78
- defined, 16
- derivatives and, 77–80
- generalized vec operators and, 14–23
- Kronecker products and, 16–17
- matrix algebra and, 14–23
- notation for, 19, 87
- theorems for, 17–21
- transpose operator and, 21–23

Generalized inverse, 44

Generalized-least-squares (GLS) estimators, 96, 97, 106

- asymptotically efficient, 97, 106, 176
- maximum likelihood estimators as, 95–96, 105

Generalized vec operators, 14–15, 87

- commutation matrices and, 29–43
- definition, 14
- derivatives, 77–80
- generalized devec operators and, 14–23
- Kronecker products and, 16–17
- matrix algebra and, 14–23
- notation for, 19, 87
- theorems for, 17–21
- transpose operator and, 21–23

GLS. *See Generalized-least squares estimators*

Godfrey statistic, 98

H

Hessian matrix, 89, 101, 135–138

- linear regression models, 89, 93, 94, 102–104
- LSE models, 152, 153, 163, 186
- SURE models, 112–113, 123–124, 135–138

I

- Information matrix, x , 1
 defined, 2
 econometric models and, 5
 linear-regression models and, 89, 94–95,
 104, 107, 109
 LSE models and, 153, 164–167, 186–190
 SURE models and, 113, 124, 138
 Instrumental variable estimators (IVEs), 1
 asymptotic efficiency of, 155, 175–177,
 179, 180
 generic types of, 146
 IV-GLS estimator, 147, 154, 172
 IV-OLS estimator, 147, 154, 173
 LSE models and, 177–180
 maximum-likelihood estimators and,
 154–156, 180, 181, 191–195
 modified 3SLS estimator and, 173–177
 3SLS estimators and, 155
 White estimator and, 172–173
 IVEs. *See Instrumental variable estimators*

J

- JGLS. *See Joint-generalized-least squares estimator*
 Joint-generalized-least squares (JGLS) estimator, 125–127, 139–141
 asymptotic efficiency of, 114, 125, 126,
 140, 141
 maximum-likelihood estimators and, 114,
 127, 141

K

- Kronecker products, 7–10, 41
 commutation matrices and, 31–35
 determinant of, 8
 devec operators and, 11–12, 16–17
 inverse of, 8
 partitioning and, 9–10
 rank of, 8
 trace of, 8
 transpose of, 8
 vec operators and, 7, 11–12, 16–17,
 31–35, 77

L

- Lagged values, 88, 126
 asymptotic theory and, 87, 177
 linear-regression models and, 87
 shifting matrices and, 46, 64, 64n3
 time-series analysis and, 46, 64

- unit root problems, 100, 132, 184
See also Time-series analysis
