

Contents

	Preface	ix
	Notation	xiii
1	The elements	1
	A. The maximal condition and solubility	1
	B. Nilpotency	5
	C. Some theorems about polycyclic groups	16
	D. Notes	21
2	Mal'cev's theorems	22
	A. Rationally irreducible modules	22
	B. Soluble automorphism groups	25
	C. Soluble linear groups	27
	D. Notes	37
3	Extensions	38
	A. Generalities	39
	B. Splitting theorems	44
	C. Nilpotent almost-supplements	47
	D. Notes	50
4	Arithmetical methods	53
	A. Supersolubility	54
	B. A counterexample	57
	C. Conjugacy	59
	D. Conjugate subgroups	69
	E. Congruences and algebraic integer units	76
	F. Notes	81
5	Faithful representations	83
	A. Dimension subgroups	83
	B. The embedding	87
	C. Embedding polycyclic groups	92
	D. Notes	97
6	On unipotent groups	100
	A. <i>log</i> and <i>exp</i>	100

viii	<i>Contents</i>
B. Lattices	108
C. Automorphisms	116
D. Isomorphisms	123
E. Notes	129
7 Semi-simple splitting	132
A. Jordan decomposition	133
B. The construction	138
C. Canonical embeddings	149
D. The isomorphism problem revisited	153
E. Notes	154
8 Soluble \mathbb{Z} -linear groups	156
A. The Zariski topology	156
B. Automorphisms of polycyclic groups	169
C. Finite extensions	175
D. An algorithm	177
E. Notes	184
9 A finiteness theorem	186
A. Local and global orbits of algebraic groups	186
B. The main theorem: the unipotent case	199
C. The diagonalizable case	203
D. The general case	209
E. Notes	212
10 Polycyclic groups with isomorphic finite quotients	214
A. Pickel's first theorem	215
B. Profinite completions	218
C. Pickel's second theorem	230
D. Proof of the main theorem – a special case	234
E. The general case	243
F. Notes	253
11 Examples	255
A. Groups with isomorphic finite quotients	255
B. Non-arithmetic groups	257
C. \mathfrak{I} -groups of class 2	260
D. \mathfrak{I} -groups of small Hirsch number	264
E. Some matrix groups	271
F. Notes	277
Appendix: further topics	279
References	281
