- acoustic startle, neural basis of: auditory nerve, 98–99; cochlear root neurons, 96–99; human startle blink, 22–27; NMDA receptors, 98–100; non-NMDA receptors, 98–100; nucleus reticularis pontis caudalis, 96–99, 102; ventral nucleus of lateral lemniscus, 96–99
- acoustic startle reflex: *see* startle eyeblink reflex
- affective startle modulation: alcohol effects on, 221–222; anticipation, 181; anxiety, 100, 102, 107, 113, 158, 187, 188, 189, 190, 198, 200, 206–208; arousal, 175–177, 195–198; attention and emotion, 90–92, 162–165, 168–172; automatic processes, 164–165; developmental course, 179–180, 253–254; fearfulness, 191–198; habituation, 173–174; harm avoidance, 198; hemispheric specialization, 165–166; individual differences, 187–208; imagery, 180–181, 190, 192–193; international affective picture system, 159–162; lead interval, 91, 166–168; lead stimulus parameters: *see* affective startle modulation, foreground parameters; mood induction, 174–175; motivational priming, 158, 162–163, 181–183; negative affectivity, 198; neural circuits: *see* fear potentiated startle; phobias, 201–202; posttraumatic stress disorder (PTSD), 201; probe parameters: *see* startle stimulus parameters; prototypical paradigm, 159; psychopathy, 215–218; schizophrenia, 203–204; schizotypy, 204–206; valence x arousal model, 189–190; *see also* affective startle modulation, foreground parameters; affective startle modulation, startle stimulus parameters of; fear-potentiated startle; Pavlovian conditioning
- affective startle modulation, foreground parameters, 172–180, 212–213; arousal, 175–176; category, 177–180; duration, 172–173; modality, 180; repetition, 173–174; sustained exposure, 174–175
- affective startle modulation, startle stimulus parameters of, 162–175; aversiveness, 164; intensity, 164; laterality, 165–166; modality, 162–164
- age: *see* developmental course of startle modification
- alcohol intoxication: affective modulation of startle, 221–222; effects on emotion, 220–226, 228–229; fearfulness, 220–226, 228–229; startle reflex, 221–222
- alerting, 146–149; effects on startle, 147–148
- antisocial personality: *see* psychopathy
- anxiety: *see* affective startle modulation
- arousal, 75, 79, 180, 255–256; *see also* affective startle modulation; alerting
- attention: alerting network, 146–149; awareness, 153–156; effects on long lead interval inhibition, 81–89, 143; effects on short lead interval inhibition, 68–70, 143–145, 154, 171, 236–237; effects on startle eyeblink reflex, 141–142, 154; executive network, 149–151; neurophysiological basis, 141–142; orienting network, 139–146;

Subject Index

- attention (*cont.*)
 vs. emotion, 163–164; vertical models of, 149–156; *see also* affective startle modulation; short lead interval inhibition; long lead interval modification
- attention deficit disorder, 129
- attentional blink, 271–274; compared with short lead interval inhibition, 272–274; time course, 273
- background noise, 2–3, 73–75, 81
- backward masking, 274–276; compared with short lead interval inhibition, 275–276
- classical conditioning: *see* Pavlovian conditioning
- consciousness: attention, 151–154; awareness, 151–153; vertical models of, 152–156; volition, 151–152
- depression, 187; affective startle modification, 199–200
- developmental course of startle modification: affective modification, 179–180, 253–254; habituation of startle reflex, 250–251, 255, 259–261; long lead interval modification, 246–249, 251–252; short lead interval modification, 246–248, 262–263
- Ego Impairment Index: *see* thought disorder
- electrodermal response: *see* skin conductance response
- electromyography (EMG): electrodes, 36; filtering, 37; smoothing, 37–38
- emotion: *see* affective startle modulation
- event-related potentials (ERPs): 284–299; *see also* N100 ERP; P50 ERP; P300 ERP
- fearfulness, and affective startle modification, 191–198, 207–208
- fear-potentiated startle: benzodiazepam effects, 213, 222–223; conditioned stimulus modality, 103, 105, 310–312; history, 2, 8–9, 307; lead interval, 101–102; unconditioned stimulus intensity, 105, 310–311; vs. light-enhanced startle, 107–110; *see also* affective startle modulation; fear-potentiated startle, neural basis of; long lead interval facilitation; Pavlovian conditioning
- fear-potentiated startle, neural basis of: amygdala, 102–104, 107–113, 211–213; anxiety versus fear, 112–113; bed nucleus of stria terminalis, 100, 107–113; central gray, 100; corticotropin-releasing hormone, 100, 110–111; hippocampus, 211–212; lateral geniculate, 105; NMDA antagonist, 103; non-NMDA antagonist, 103–104, 109–110; periaqueductal gray, 105, 107; perirhinal cortex, 104; thalamus, 105
- Fear Survey Schedule (FSS), 191
- gender differences: in affective modulation, 178–180; in short lead interval inhibition, 130, 243
- habituation: long lead interval modification, 173, 174; neurophysiology, 260–261; short lead interval inhibition, 61–63; startle and P300, 259–262; startle reflex, 115, 130, 173; startle reflex, developmental course, 250–251, 255, 259–261
- heart rate, 81–86, 163–164, 182, 195, 221, 227, 245, 252, 255–257, 266
- Huntington's disease, 65, 116, 117, 118, 124, 128, 129
- information processing: automatic processing, 154, 164–165; controlled processing, 154, 168; vertical model, 149–156
- inhibition of return, 145–146

- latency of startle eyeblink, 25, 27, 40, 43, 47; facilitation, 23, 91, 115–116, 307–308, 311; in schizophrenia, 234; in schizotypal personality disorder, 238; vs. magnitude, 147, 233
- laterality: affective modulation, 165–166; attention, 140; neurophysiology, 118–119, 130
- lead interval, 74–82, 83–87; definition, 11–12; *see also* long lead interval modification; short lead interval facilitation; short lead interval inhibition
- lead stimulus: definition, 10–11; *see also* long lead interval modification; short lead interval modification
- long lead interval modification: affective modulation: *see* affective startle modulation; attention, 81–89; attention vs. emotion, 90–92, 305–306; attentional modification, developmental course of, 251–252; definition and terminology, 10–12; developmental course, 246–249; history, 2–3, 8–9; lead interval, 74–82, 83–87; lead stimulus parameters, 73–82, 83–85; lead stimulus parameters, discrete vs. continuous, 80–81, 83–85; modality match/mismatch, 86–89, 91–92, 303–306, 310–312; N100 event-related potential, 293–294; P50 event-related potential, 288–289; P300 event-related potential, 258–259, 296–297
- N100 (N1) event-related potential, 140, 292–294; long lead interval modification, 293–294, 298; short lead interval modification, 293, 298
- negative affectivity, and affective startle modification, 198
- negative priming, 276–278; short lead interval blink inhibition, 277–278
- obsessive–compulsive disorder, 118, 129, 277
- orienting, 83, 218–234; attentional processes, 302–306; exogenous and endogenous, 129; modality-specific processes, 303–306; *see also* attention
- P50 event-related potential, 123, 130, 287–291; long lead interval modification, 288, 289, 298; short lead interval inhibition, 288–291, 298; sensory gating in schizophrenia, 232; suppression, 288–291
- P300 event-related potential, 294–297; affective valence, 164, 171; elicited by startle stimuli, 256–262, 261–262, 294–295, 298; habituation of response to startle stimuli, 259–261, 295; long lead interval facilitation, 258–259, 296–297; short lead interval inhibition, 258–259, 296–297
- Parkinson's disease, 117, 122, 127
- Pavlovian conditioning: attentional vs. emotional processes, 300–302, 309–313; conditioned stimulus modality, 310–312; latency facilitation, 307–308, 311; startle potentiation, 307–313; unconditioned stimulus intensity, 310–311; unconditioned stimulus modality, 308–312; *see also* fear-potentiated startle; long lead interval modification
- phobias, and affective startle modification, 201–202
- postauricular reflex, 140–141, 148, 154
- posttraumatic stress disorder (PTSD): affective startle modification, 201; exaggerated startle in, 188, 191, 201
- prepulse, history of term, 4; *see also* lead stimulus
- prepulse facilitation, history of term, 4; *see also* long lead interval modification; short lead interval facilitation
- prepulse inhibition (PPI), history of term, 4; *see also* short lead interval inhibition
- probe: *see* startle stimulus
- protection of processing, 66–67; attentional blink, 271–274; backward masking, 275–276; schizophrenia, 233–234

Subject Index

- psychopathy: affective startle modulation, 215–218; alcohol intoxication, 226; fearfulness, 209–210, 214–219, 226–228; emotional detachment, 216–219; harm avoidance, 198–199; two-factor model, 213–214, 218–219
- psychosis-prone subjects, short lead interval inhibition, 238–240
- reflexology, 137–138
- schizophrenia: affective startle modification, 203–204; attentional modulation of short lead interval inhibition, 236–237; backward masking, 275–276; late-life schizophrenia, 237; lead interval, 234–237; lead stimulus intensity, 235; negative priming, 277–278; sensory gating, 232–234, 240–242; short lead interval inhibition, 130, 234–237, 275–276, 277–279; thought disorder, 240–241, 279; Wisconsin Card Sorting Task (WCST), 279
- schizotypal personality disorder: affective startle modification, 204–206; negative priming, 277–278; prepulse inhibition deficits, 118; short lead interval inhibition, 237–238
- sensorimotor gating, 65–66, 269–270; animal models, 241–242; cortico-striato-pallido-pontine circuit, 115, 242; schizophrenia, 232–234; thought disorder, 240–241
- short lead interval facilitation: definition, 115–116; history, 7; lead interval, 63–64; neurochemical regulation, 192–197; neurophysiology, 119
- short lead interval inhibition: attention, 68–70, 143–145, 154, 171, 236–237; attentional blink, 272–274; automatic processing, 68–71; backward masking, 275–276; definition and terminology, 1, 4, 10–12, 51–53, 115–116; developmental course, 246–248, 262–265; forebrain influences, 198–209; forebrain influences, relationship to psychopathology, 209–214; habituation, 61–63; history, 1–5, 6–9; lead interval, 53–54; lead stimulus parameters, 54–60; lead stimulus parameters, discrete vs. continuous, 58–59; models of psychopathology, 129–132; N100 event-related potential, 293, 298; negative priming, 277–278; P50 event-related potential, 288–291, 298; P300 event-related potential, 258–259, 296–298; protection of processing, 66–67, 70–71; schizophrenia, 234–237, 269–270; sensorimotor gating, 65–66, 70–71, 129–130, 269–270; startle stimulus intensity, 60–61; thought disorder, 240–241, 280–281; Wisconsin Card Sorting Task (WCST), 278–279; *see also* short lead interval inhibition, neural basis of
- short lead interval inhibition, neural basis of: acetylcholine, 122–123; amygdala, 125–126; cortico-striato-pallido-pontine circuit, 115, 119; developmental processes, 130–132; dopamine (DA), 121–122, 127; forebrain circuitry, 124–129; genetics, 130–132; glutamate, 122–123; hippocampus, 124–125; limbic cortex, 124–126; medial prefrontal cortex, 125; neurochemical regulation, 119–123; neural circuitry, 117–120; neuroleptics, 126–127; nucleus accumbens, 126–127; nucleus reticularis pontis caudalis, 117, 128; psychopathology, 129–130
- short lead interval modification: *see* short lead interval facilitation; short lead interval inhibition
- skin conductance response, 104, 308, 311
- startle eyeblink reflex: alcohol effects on, 221–222; attentional effects on, 141; developmental course, 250–251, 255, 259–261; elicitation: *see* startle stimulus; latency, 47; physiology, 22–26; quantification, 41–48; recording, 35–41; *see also* acoustic startle, neural basis of
