

Index

- bilinear form (associated with a pair
 potential) 56
 birth–death semi-group 12
 birth rate 12
 border 92
 Borel subsets 25, 34
 boundary 2
- circuit 96
 configuration 1
 connected 92
 correlation function 42
 cubic lattice 8
- death rate 12
 δ -trivial σ -algebra 111
- edge 1, 25, 91
 equilibrium state 11
 ergodic theorem 11, 22
 extreme point 106
- finite dimensional cylinder 25, 34
 FKG inequality 20
 function
 convex 84
 correlation 42
 increasing 19, 61
 speed 15
- generator 11
 irreducible 11
 Gibbs state
 high density 63
 low density 63
 with boundary values 26, 42
 with potential V 2, 26, 40
 with specification \mathcal{V} 35
- graph
 countable 25, 91
 finite 1
 phase transition 94
- Griffiths inequalities 69
 high density Gibbs state 63
 Holley's inequality 20, 61
 inclusion–exclusion principle 3
 increasing function 19, 61
 involution 52
 interaction potential 3, 41
 Ising potential 57
- jump matrix 15
- Kirkwood–Salsburg equations 47
- Lee–Yang circle theorem 74, 115
 local specification 35
 positive 39
 low density Gibbs state 63
- Markov chain 10
 coupled 19
 Markov random field 3, 26
 Möbius inversion formula 3
 m -particle semi-group 15
- nearest neighbour
 potential 3, 92
 semi-group 12, 15
 state 4
- neighbour 1, 91
 n -simplex 2
- path 92
 phase transition 29, 41
 phase transition graph 94
 potential 2, 26, 39
 associated with \mathcal{V} 40
 attractive 60
 continuous 40
 interaction 3, 41
 Ising 57
