978-0-521-09065-0 - Characteristic Classes and the Cohomology of Finite Groups

C. B. Thomas

Table of Contents

[More information](#)*Contents*

<i>Introduction</i>	ix
1 Group cohomology	1
Preliminaries	1
Low-dimensional interpretation	6
Homology groups	8
Complete resolutions and the Tate groups	9
Notes and references	11
Problems	12
2 Products and change of group	14
Definition of the cup product	14
Change of group	18
Notes and references	24
Problems	24
3 Relations with subgroups and duality	25
Relations between subgroups	25
Duality	28
Periodicity	31
Notes and references	36
Problems	36
4 Spectral sequences	38
The spectral sequence of an extension	38
An application – split metacyclic groups	43
Notes and references	47

viii	<i>Contents</i>	
	Problems	48
5	Representations and vector bundles	49
	Representations	49
	Coordinate bundles	55
	Classifying spaces	62
	Notes and references	63
6	Bundles over the classifying space for a discrete group	64
	Flat bundles	64
	First calculations	73
	Extra-special p -groups	75
	Notes and references	77
	Problem	78
7	The symmetric group	79
	Notation	79
	Chern classes of the representation π_n	80
	Linear groups over rings of algebraic integers	85
	Notes and references	89
8	Finite groups with p-rank ≤ 2	91
	Abelian groups	91
	Groups with p -periodic cohomology	92
	p -groups of rank 2, $p \geq 5$	95
	Notes and references	101
9	Linear groups over finite fields	102
	$SL(n, q)$	102
	Characteristic classes for modular representations	106
	Notes and references	113
	<i>Appendix 1: The Riemann–Roch formula</i>	114
	<i>Appendix 2: Integral cohomology of non-abelian groups of order p^3, $p \geq 3$</i>	120
	<i>Appendix 3: Non-abelian groups of order p^4, $p \geq 5$</i>	122
	<i>References</i>	123
	<i>Index of symbols</i>	126
	<i>Index</i>	127
