978-0-521-09100-8 - Water Science Reviews 2: Crystalline Hydrates

Edited by Felix Franks

Table of Contents

[More information](#)

Contents

- The Structure of Ice-Ih** 1
W. F. KUHS and M. S. LEHMANN, *Institut Laue–Langevin, Grenoble, France*
Introduction
Crystallographic Studies
Experimental Observations of the Ice Rules and Local Ordering
Structural Implications of Spectroscopic Results
Structural Implications of Nuclear Resonance Data
Computational Chemical Studies of the Geometrical Parameters
Comparison with Hydrogen Bonding and Water in Other Systems
Summary
- Water Structure in Crystalline Solids: Ices to Proteins** 67
HUGH SAVAGE, *National Bureau of Standards, USA and National Institutes of Health, Bethesda, USA*
Introduction
Current Structural Information
Diffraction Studies of Hydrate Crystals
Details of Water Geometries in High-Resolution Neutron Structures
Implications of Repulsive Limitations in Water Structures
Analysis of Solvent in Larger Hydrate Crystals: Protein and DNA
Discussion
Appendix: Bibliography of the Crystal Hydrate Structures Examined
- The Nature of the Hydrated Proton. Part One: The Solid and Gaseous States** 149
C. I. RATCLIFFE, *National Research Council Canada, Ottawa*
D. E. IRISH, *University of Waterloo, Canada*
Historical Perspective
Nomenclature
Solid State
Gaseous State
Summary
Appendix: Bibliography of Studies of the Hydrated Proton in Solids
