Contents

1	The nature of the hydrated proton	<i>page</i> 1
	Part two: theoretical studies; the liquid state	
	C. I. RATCLIFFE AND D. E. IRISH	
1.1	Theoretical studies	1
1.1.1	H ₃ O ⁺	2
1.1.2	H ₅ O ₂ ⁺	8
1.1.3	Higher hydrates	14
1.2	The liquid state	24
1.2.1	The hydrated proton in non-aqueous liquids	24
1.2.2	The hydrated proton in aqueous solutions	32
1.3	Concluding remarks	58
	Appendix	60
	Acknowledgements	
	References	
2	Water as a plasticizer: physico-chemical aspects of low-moisture polymeric systems	79
	H. LEVINE AND L. SLADE	
2.1	Introduction	79
2.2	Theoretical background	82
2.2.1	Polymer structure–property principles	83
2.2.2	Crystallization mechanism and kinetics for PC polymers	86
2.2.3	Viscoelastic properties of amorphous and PC polymers	89
2.2.4	Effects of water as a plasticizer on the thermomechanical properties of solid polymers	91
2.2.5	Effects of water as a plasticizer on the properties of polymers in the rubbery state – the domain of WLF kinetics	96
2.2.6	Water sorption by glassy and rubbery polymers	97
2.3	Collapse phenomena in low-moisture and frozen polymeric food systems	107
2.3.1	Low-temperature thermal properties of polymeric vs. monomeric saccharides	109
2.3.2	Structure–property relationships for SHPs and polyhydroxy compounds	119

vi	<i>Contents</i>	
	2.3.3 Predicted functional attributes of SHPs and polyhydroxy compounds	123
	2.3.4 The role of SHPs in collapse processes and their mechanism of action	127
	2.4 Structural stability of intermediate moisture foods	133
	2.5 Starch as a PC polymer plasticized by water: thermal analysis of non-equilibrium melting, annealing, and recrystallization behavior	145
	2.5.1 Thermal properties of starch–water model systems	146
	2.5.2 Thermal properties of three-component model systems: the antiplasticizing effect of added sugars on the gelatinization of starch	151
	2.5.3 Retrogradation/staling as a starch recrystallization process	154
	2.5.4 Amylopectin–lipid crystalline complex formation at low moisture	160
	2.6 Gelatin: polymer physico-chemical properties	162
	2.6.1 Structure–property relationships	163
	2.6.2 Thermal properties of PC gelatin	164
	2.6.3 Thermomechanical behavior of amorphous gelatin	169
	2.6.4 Functional properties of gelatin in industrial applications	171
	2.7 Gluten: amorphous polymeric behavior	175
	2.8 Conclusion	176
	Acknowledgements	
	References	
3	Cellular water relations of plants	186
	A. DERI TOMOS	
	3.1 Levels of study	186
	3.2 Plant cell structure	187
	3.3 Thermodynamic basis of plant water relations	189
	3.3.1 Osmosis	189
	3.3.2 Hydraulic conductivity, reflection coefficient and solute permeability	193
	3.3.3 Membrane diffusive permeability	197
	3.3.4 Volumetric elastic modulus	197
	3.4 Physical environment of water in cellular compartments	200
	3.4.1 The cell wall/apoplast	200
	3.4.2 Cytoplasm/symplast	210
	3.4.3 Vacuoles	211
	3.5 Interactions between compartments	211
	3.5.1 Static systems ($J_v = 0$)	211
	3.5.2 Dynamic situations ($J_v < > 0$)	238
	3.5.3 Hydraulic machines	250
	3.5.4 Long range transport	257
	3.6 Concluding remarks	258
	Appendix. Techniques of measuring cell-related water relations parameters	259
	A3.1 Plasmometry	259
	A3.2 Pressure bomb	261
	A3.3 Transcellular osmosis	261
	A3.4 Perfusion techniques	262
