

CONTENTS

Preface *page* xiii

Chapter I

FREQUENCY DISTRIBUTIONS

1. Arithmetic mean. Partition values	1
2. Change of origin and unit	4
3. Variance. Standard deviation	6
4. Moments	8
5. Grouped distribution	10
6. Continuous distributions	12
EXAMPLES I	16

Chapter II

PROBABILITY AND PROBABILITY DISTRIBUTIONS

7. Explanation of terms. Measure of probability	19
8. Theorems of total and compound probability	21
9. Probability distributions. Expected value	24
10. Expected value of a sum or a product of two variates	26
11. Repeated trials. Binomial distribution	28
12. Continuous probability distributions	30
13. Theorems of Tchebychef and Bernoulli	32
14. Empirical definition of probability	34
15. Moment generating function and characteristic function	36
16. Cumulative function of a distribution	39
EXAMPLES II	42

Chapter III

SOME STANDARD DISTRIBUTIONS

Binomial and Poissonian Distributions

17. The binomial distribution	46
18. Poisson's distribution	47

The Normal Distribution

19. Derivation from the binomial distribution	<i>page</i> 50
20. Some properties of the normal distribution	51
21. Probabilities and relative frequencies for various intervals	55
22. Distribution of a sum of independent normal variates	57
EXAMPLES III	58
MATHEMATICAL NOTES	63

Chapter IV

BIVARIATE DISTRIBUTIONS.
 REGRESSION AND CORRELATION

23. Discrete distributions. Moments	67
24. Continuous distributions	68
25. Lines of regression	69
26. Coefficient of correlation. Standard error of estimate	72
27. Estimates from the regression equation	74
28. Change of units	75
29. Numerical illustration	76
30. Correlation of ranks	79
31. Bivariate probability distributions	80
32. Variance of a sum of variates	82
EXAMPLES IV	83

Chapter V

FURTHER CORRELATION THEORY.
 CURVED REGRESSION LINES

33. Arrays. Linear regression	87
34. Correlation ratios	89
35. Calculation of correlation ratios	91
36. Other relations	92
37. Continuous distributions	93
38. Bivariate normal distribution	95
39. Intraclass correlation	97

Contents **ix**

Curved Regression Lines

40. Polynomial regression. Normal equations	<i>page</i> 99
41. Index of correlation	102
42. Some related regressions	104
EXAMPLES V	105

Chapter VI

THEORY OF SIMPLE SAMPLING

43. Random sampling from a population	109
---------------------------------------	-----

Sampling of Attributes

44. Simple sampling of attributes	109
45. Large samples. Test of significance	111
46. Comparison of large samples	112
47. Poissonian and Lexian sampling. Samples of varying size	114

Sampling of Values of a Variable

48. Random and simple sampling	116
49. Sampling distributions. Standard errors	117
50. Sampling distribution of the mean	119
51. Normal population. Fiducial limits for unknown mean	121
52. Comparison of the means of two large samples	122
53. Standard error of a partition value	124
EXAMPLES VI	126

Chapter VII

STANDARD ERRORS OF STATISTICS

54. Notation. Variances of population and sample	130
55. Standard errors of class frequencies	131
56. Covariance of the frequencies in different classes	132
57. Standard errors in moments about a fixed value	133
58. Covariance of moments of different orders about a fixed value	135
59. Standard errors of the variance and the standard deviation of a large sample	136
60. Comparison of the standard deviations of two large samples	137

*Contents**Sampling from a Bivariate Population*

61. Sampling covariance of the means of the variables	<i>page</i> 138
62. Variance and covariance of moments about a fixed point	140
63. Standard error of the covariance of a large sample	141
64. Standard error of the coefficient of correlation	141
EXAMPLES VII	144

Chapter VIII

BETA AND GAMMA DISTRIBUTIONS

65. Beta and Gamma functions	146
66. Relation between the two functions	147
67. Gamma distribution and Gamma variates	149
68. Sum of independent Gamma variates	151
69. Beta distribution of the first kind	153
70. Alternative proof of theorems	154
71. Product of a $\beta_1(l, m)$ variate and a $\gamma(l+m)$ variate	156
72. Beta distribution of the second kind	156
73. Quotient of independent Gamma variates	158
EXAMPLES VIII	160

Chapter IX

CHI-SQUARE AND SOME APPLICATIONS

74. Chi-square and its distribution	164
75. Orthogonal linear transformation	164
76. Linear constraints. Degrees of freedom	166
77. Distribution of the 'sum of squares' for a random sample from a normal population	169
78. Nature of the chi-square test. An illustration	170
79. Test of goodness of fit	173
80. Numerical examples	175
81. Additive property of chi-square	177
82. Samples from an uncorrelated bivariate normal population. Distribution of the correlation coefficient	177
83. Distribution of regression coefficients and correlation ratios	179
EXAMPLES IX	181

Contents **xi**

Chapter X

FURTHER TESTS OF SIGNIFICANCE.
SMALL SAMPLES

84. Small samples	<i>page</i> 185
<i>'Student's' Distribution</i>	
85. The statistic t and its distribution	186
86. Test for an assumed population mean	189
87. Fiducial limits for the population mean	189
88. Comparison of the means of two samples	190
89. Significance of an observed correlation	192
90. Significance of an observed regression coefficient	194
91. Distribution of the range of a sample	195
<i>Distribution of the Variance Ratio</i>	
92. Ratio of independent estimates of the population variance	196
93. Fisher's z distribution. Table of F	198
<i>Fisher's Transformation of the Correlation Coefficient</i>	
94. Distribution of r . Fisher's transformation	200
95. Comparison of correlations in independent samples	202
96. Combination of estimates of a correlation coefficient	203
EXAMPLES X	205

Chapter XI

ANALYSIS OF VARIANCE AND COVARIANCE

Analysis of Variance

97. Resolution of the 'sum of squares'	209
98. Homogeneous population. One criterion of classification	210
99. Calculation of the sums of squares	212
100. Two criteria of classification	214
101. The Latin square. Three criteria of classification	217
102. Significance of an observed correlation ratio	221
103. Significance of a regression function	223
104. Test for non-linearity of regression	224

xii

*Contents**Analysis of Covariance*

105. Resolution of the 'sum of products'. One criterion of classification	page 226
106. Calculation of the sums of products	228
107. Examination and elimination of the effect of regression	229
108. Two criteria of classification	233
EXAMPLES XI	236

Chapter XII

MULTIVARIATE DISTRIBUTIONS.
 PARTIAL AND MULTIPLE CORRELATIONS

109. Introductory. Yule's notation	242
110. Distribution of three or more variables	244
111. Determination of the coefficients of regression	246
112. Multiple correlation	249
113. Partial correlation	250
114. Reduction formula for the order of a standard deviation	253
115. Reduction formula for the order of a regression coefficient	254
116. Normal distribution	255
117. Significance of an observed partial correlation	256
118. Significance of an observed multiple correlation	257
EXAMPLES XII	260
LITERATURE FOR REFERENCE	263
INDEX	273

TABLES

1. Ordinates of the Normal Curve	53
2. Area under the Normal Curve	56
3. Table of Chi-square	171
4. Table of t	188
5. Significant values of r	193
6. Table of F . The 5 and 1% 'points'	199
7. Table of r and z . Fisher's transformation	201
