

INDEX

Symbols with a fixed meaning

- | | |
|---|------------------------------------|
| ϵ , 1 | $\rho(E_1, E_2)$, 23 |
| \subseteq , 1 | $\mathcal{K}E = \overline{E}$, 26 |
| \subset , 2 | ΔE , 27 |
| \cup , \cap , 2 | $\mathcal{I}E$, 29 |
| \mathcal{C} , 5 | $\mathcal{F}E$, 31 |
| \cup , \cap , 8 | E' , 32 |
| X , S , T = metric space or metrisable space, 17, 59 | $S = H_1 H_2$, 71 |
| G = open set, 21 | \mathbf{G} = grating, 101 |
| F = closed set, 23 | Ω^p , 102 |
| D = domain, 71 | \mathcal{C}^k , 103 |
| | $ C^k $, 104 |
| Q^p , 14 | $\Gamma^k \sim 0$, 107 |
| R^p , H^∞ , 17 | K = 2-chain, κ = 1-chain, |
| R^ω , 20 | γ = 1-cycle, 109 |
| I^ω , 39 | $p_0(G)$, $p_1(G)$, 152 |
| Z^p , 64 | $c(E)$, 153 |
| $X^2 = R^2$ or Z^2 , 161 | |
| o = the origin, 17, 19 | $ s $, 175 |
| w = the 'point at infinity', 65 | \simeq , 176 |
| | \cong , 177 |
| $\rho(x, y)$, 17 | $\lambda(s)$ = length of s , 184 |
| $\ x\ $, $ x $, 19 | $\nu(s_1, s_2)$, 189, 190, 192 |
| $U(a, \epsilon)$, $U_\rho(a, \epsilon)$, 20 | $\eta(s_1, s_2)$, 189 |
| $\langle \alpha, \beta \rangle$, $\langle \alpha, \infty \rangle$, etc., 21 | $\omega(a, l)$, 191 |
| $U(E, \epsilon)$, 23 | \mathbf{c}_m , 192 |
| accessible, 162 | simple, 76, 113 |
| Alexander Duality Theorem (case of), 135 | stepped, 141 |
| Alexander's Lemma, 110, 134 | arc-chain, 141 |
| generalised, 125 | arc-wise connected, 92 |
| annulus, 148 | Baire's Density Theorem, 52 |
| approximation, ϵ -, 189 | Banach space, 51 |
| arc, oriented simple, 180 | base of neighbourhoods, 22, 34 |
| segmental, 140 | Boolean algebra, 7, 199 |

boundary of chain, 103, 131
 bounded set, 27
 bounding cycle, 107

 Cantor set, 36
 cardinal number, 15
 cartesian space, closed (Z^n), 65
 cartesian space, open (R^n), 17
 properties:
 algebraic dimension, 25, 201
 complete, 43
 connected, 74
 locally compact, 43
 locally connected, 84
 semi-compact, 53
 separable, 33
 Cauchy's Theorem:
 stronger form, one contour, 187;
 several contours, 196
 weaker form, 186
 cell:
 k-cell, 101, 129
 open convex cell, 26
 chain:
 ε-chain (of points), 81
 k-chain, 102, 130
 polygon-chain, 141
 chain of sets, 74
 closed set (F), 23, 49
 closure ($\mathcal{C}E, \bar{E}$), 26, 49
 compact, 40, 204
 locally, 43
 sequentially, 204
 complement ($\mathcal{C}E$), 5
 complete space, 51
 completion theorem, 53
 component,
 of a *k*-chain, 104, 131
 of a space, 77
 connected, 71, 104, 131
 arc-wise, 92
 ε-connected, 81
 strongly, 84
 connectivity, 153
 constituent, 84
 continuous,
 mapping, 66, 69
 real function, 22
 continuum, 71
 convergence,
 general principle of, 43
 of sequences, 37
 convergence space, 204

convex,
 cell, 26
 cover, 29
 set, 25, 30
 correspondence, one-one, 10
 countable (= enumerable), 12
 covering, 46
 cross-cut, 118
 cut-point, 93, 165, 205
 cycle, 103, 131

 decreasing sequence of sets, 47
 deformation, 176
 linear, 180
 loop-deformation, 177
 degree of a topological mapping, 198
 dense, 33
 dense-in-itself, 35
 derived set, 32, 203
 diameter (ΔE), 27
 dimension,
 algebraic, 25, 201
 invariance of, 120, 137
 discrete set, 33
 disjoint sets, 4
 domain (D , = connected open set), 71
 duality, 7

 edge (= 1-cell), 101
 element, 121, 134
 empty set, 4
 end-cut, 118
 enumerable, 12
 equivalence relation, 15

 finite sets, 11, 199
 free arc, 165
 frontier ($\mathcal{F}E$), 31
 fundamental sequence, 39

 general intersection, 109, 189
 grating (G), 101, 128, 130

 Heine-Borel-Lebesgue Theorem, 47,
 204
 Hilbert cube (I^ω), 39
 compact, 43, 53
 Hilbert space (H^∞), 17
 properties:
 complete, 51
 connected, 74
 enumerable base, 35
 locally connected, 84

- Hilbert space (*cont.*)
 not locally compact, 43
 not semi-compact, 53
 separable, 34
- homeomorphism, 60, 70
- homology (\sim), 108
 homology group (mod 2), 152
 and homotopy, 195
- homotopy (\simeq, \cong), 175, 179
- implicit function theorems, 138
- integral along a path, 183, 184
- interior of a set ($\mathcal{I}E$), 29
- intersection, general, 109, 189
- intersection number ($\nu(\sigma_1, \sigma_2)$), 189, 190, 192
- invariance of dimension, 76, 120, 137
- invariance of open sets, 122, 137
- isolated points, sets, 33
- isometric mapping, 48
- Jacobians, 138, 198, 205
- join of sets, 2
- Jordan curve, 76
- Jordan domain, 117
- Jordan's Theorem, 115, 135
 converse of, 166
 for stepped polygons, 141
- Kérékjárto's Theorem, 168
- Kronecker index ($\nu(\sigma_1, \sigma_2)$), 189, 190, 192
- lattice, 199
- limit of a sequence of points, 37
- limit-point of a set of points, 32
- linear space (= vector space), 19, 201
- linear subset, 25, 44
- linearly dependent, 25
- locally compact, 43
- locally connected (lc), 84, 205, 208
 relatively, 159
 uniformly (ulc), 160
- locally separable, 75
- locus of k -chain ($|C^k|$), 104, 131
- loop, 176
 simple, 179
- mapping, topological, on to standard set:
 of any domain, 157
 of closure of Jordan domain, 169
 of simply connected domain, 149
- metric space, 17
- metrisable topological space, 59
- monotone system of sets, 47
- neighbourhood, 20
- net, ϵ -, 45
- non-singular segmental set, 140, 141
- norm, normed space, 19
- nowhere dense, 35
- null-homotopic, 177
- null-set, 4
- open set (G), 21, 49
 invariance of, 122
- order,
 of a point with respect to a loop,
 $\omega(a, l)$, 191
 of points along a path, 175
- oriented simple loop, 194
- oriented triangle, 194
- parameter, change of, 178
- partition of a space ($S = H_1/H_2$), 71
- path, 175
 point-path, 175
 simple, 179
- Peano continuum, 89
- perfect set, 35
- polygon, simple, 140
 stepped, 141
 Jordan's theorem for a stepped polygon, 141
- polygon-chain, 141
- principal, 129
- product space, 18, 60
- proper subset, 2
- quasi-linear arc, 164
- ray, 18, 19
- rectifiable path, 184
- refinement of a grating, 105
- reflexive relation, 15
- relative structure, 48
- residual set, 5
- segment, 18, 19
- segmental set, 140
 non-singular, 140
- semi-compact, 53
- sense-preserving, reversing, 198
- separable, 33
 locally, 75

Cambridge University Press
