

CONTENTS

	Introduction	<i>page ix</i>
1	Topological spaces, normality and compactness	1
1	Topological spaces	1
2	Local finiteness, the weak topology and the weight of topological spaces	10
3	Normal spaces	17
4	Complete, total and perfect normality	27
5	Compact and completely regular spaces	35
6	Bicompactifications	42
7	Inverse limits	52
2	Paracompact and pseudo-metrizable spaces	57
1	Paracompact spaces	57
2	Hereditarily paracompact spaces, weakly, strongly and completely paracompact spaces	72
3	Pseudo-metrizable and metrizable spaces	77
4	Completeness and the spaces $C_n(X)$	91
5	Perfect mappings	93
6	Simplicial complexes, polyhedra and the nerves of coverings	105
	Notes	110
3	Covering dimension	111
1	The definition of dim	111
2	The dimension of Euclidean space	121
3	Inessential mappings and unstable values	127
4	Locally finite coverings	130
5	Sum theorems	135
6	The monotonicity of covering dimension	138
7	The dimension of polyhedra	142
8	Rank and dimension	144
	Notes	147

vi	CONTENTS	
4	Inductive dimension	<i>page</i> 150
1	Small inductive dimension	150
2	Large inductive dimension	155
3	Two examples	161
4	Subset and sum theorems	166
5	Dimension of pseudo-metrizable spaces	178
	Notes	185
5	Local dimension	188
1	Definitions and relations with dimension	188
2	Subset and sum theorems	190
3	The monotonicity of covering dimension	193
4	Some examples	198
	Notes	213
6	Images of zero-dimensional spaces	214
1	Canonical coverings and dimension	214
2	Irreducible mappings	218
3	Images of zero-dimensional spaces	221
4	Dimension and bicomactification	231
	Notes	238
7	The dimension of pseudo-metrizable and metrizable spaces	239
1	Images of zero-dimensional spaces	239
2	Sequences of open coverings and inverse limits	250
3	Universal spaces for metrizable spaces of given weight and dimension	257
4	Prabir Roy's example	271
5	Generalizations of metric spaces and dimension theory	288
	Notes	295
8	The dimension of bicomact spaces	298
1	Inverse limits	298
2	A family of examples due to Vopěnka	302
3	V. V. Filippov's example	308
	Notes	330

CONTENTS		vii
9	Mappings and products	<i>page</i> 332
1	Mappings into spheres	332
2	Mappings and dimension	336
3	The product theorem for covering dimension	350
4	The product theorem for large inductive dimension	355
	Notes	362
10	Algebras of continuous real functions and dimension	366
1	A modification of covering dimension	366
2	Normed algebras	369
3	Dimension and bicomactification	378
4	Analytic dimension	387
5	Z -spaces	401
6	A universal space	410
	Notes	410
	Bibliography	415
	Index	424
