## Subject index

- accurate space differencing, 159  
 asymptotic behaviour of non-planar  $N$  waves, 76–80
- Bäcklund transformations**, 91, 92, 118
- Burgers equation**  
 as a heuristic model equation, 2, 9  
 as a model for turbulent flows, 5  
 boundary value problem for, 34  
 derivation of, 9–15  
 exact linearisation of, 16  
 historical background of, 15–16  
 idiosyncratic behaviour of, 72  
 initial value problem for, 21  
 $N$  wave solution for, 28  
 numerical solution with step initial conditions, 162  
 periodic initial conditions for, 31  
 self-similar solutions of, 19, 20  
 single hump solution of, 25  
 stationary solution and shock structure for, 23  
 viscosity method and, 38
- compressible flow equations, 6  
 and simple waves, 8
- connection problem  
 GBE with damping, 202  
 non-planar GBE, 227
- derivation of non-planar Burgers equation, 56–60
- diffusivity of sound, 13
- discontinuous initial data for numerical solution of Fisher's equation, 168–9  
 non-planar GBE, 173, 188, 192  
 GBE with damping, 212
- Douglas–Jones implicit finite difference scheme for GBE with damping, 212  
 nonlinear parabolic equations, 155  
 non-planar  $N$  waves, 174–5
- embryo shock régime  
 non-planar Burgers equation, 173  
 planar Burgers equation, 178
- Euler–Painlevé transcendents  
 definition of, 201  
 relation to GBE with damping, 201
- relation to non-planar GBE, 226  
 evolution of self-similar solutions as intermediate asymptotics  
 Fisher's equation, 169  
 GBE with damping, 210, 216
- fast Fourier transform and pseudo-spectral approach, 158
- Fisher's equation  
 connection with Korteweg–de Vries–Burgers equation, 107  
 numerical study of, 164–72  
 stability of travelling wave solutions of, 109  
 travelling wave solutions of, 104
- generalised Burgers equations (GBEs)  
 as a coupled nonlinear system, 12  
 cylindrically symmetric Burgers equation, 140  
 with damping, 44, 198  
 with variable viscosity, 196  
 inhomogeneous Burgers equation, 92  
 model for pre-breakdown discharge between electrodes, 150  
 model for water infiltration into a homogeneous soil, 151  
 non-planar Burgers equation, 137  
 occurring in plasma physics, 76  
 relation with Navier–Stokes equations, 10  
 super-cylindrical Burgers equation, 147  
 transformations and similarity solutions of, 80–8
- Gunn effect, 199
- Hopf–Cole transformation, 16
- Hopf–Cole like transformations, 17, 80  
 and GBEs, 82
- implicit finite difference schemes for parabolic PDEs, 155
- infinitesimal transformations, 18–19
- inhomogeneous Burgers equation, 82, 92  
 and initial boundary value problem, 94–7
- intermediate asymptotics  
 definition of, 4

- and self-similar solutions of Burgers equation, 23–4
- cylindrically symmetric Burgers equation, 140
- GBE with damping, 210
- nonlinear diffusion problem arising in plasma physics, 127
- nonlinear heat equation, 114, 120–6
- super-cylindrical Burgers equation, 147
- inviscid solutions
  - Burgers equation, 38
  - non-planar Burgers equation, 174
- Korteweg–de Vries equation, 6, 158, 159
  - comparison with Burgers equation, 17, 75, 92
- Korteweg–de Vries–Burgers equation, 107, 108
  - and Fisher's equation, 107
- Korteweg–de Vries equation modified by a damping term, 199, 222, 225
- laser radiation, acoustic waves produced by absorption of, 93
- Lax–Wendroff scheme and pseudo-spectral approach, 159
- matched asymptotic solutions
  - GBE with damping, 44–50
  - nonplanar  $N$  waves, 61–4
  - periodic piston problem for Burgers equation, 72–4
- Maxwell rod, stress wave propagation in, 50
- method of multiple scales, 51
  - and derivation of non-planar Burgers equation, 55–60
- modified Korteweg–de Vries equation, 199, 222, 225
  - comparison with GBE with damping, 222–5
- $N$  wave solutions of
  - planar Burgers equation, 28
  - non-planar Burgers equation, 61–6, 172–98
- Navier–Stokes equations and Burgers equations, 10, 56
- negative viscosity in Burgers equation, 93
- nonlinear diffusion problem in plasma physics, 127
  - separable solutions for, 127–32
- nonlinear heat equation, 114
  - and its transformations, 116–20
  - pure initial value problem for, 121
  - self-similar solutions and their intermediate asymptotic character, 120–6
- non-planar Burgers equation, 137
  - with general nonlinear convective term, 225
- Old-age solution for
  - cylindrical  $N$  wave, 65, 191
  - spherical  $N$  wave, 192, 194
- Painlevé transcendents, 112, 201, 226
  - and Euler–Painlevé transcendents, 201, 226
  - and Fisher's equation, 112
- periodic piston problem for Burgers equation 66, 72
- plane  $N$  wave solution, 28, 177
- pseudo-spectral finite difference scheme, 158
  - accuracy of, 159
  - comparison with implicit finite difference scheme, 173, 180, 183
  - for Burgers equation with discontinuous initial conditions, 162
  - for Fisher's equation with step initial condition, 162
  - for nonlinear dispersive model equations, 158–9
  - for non-planar  $N$  waves with discontinuous initial data, 188, 192
  - for scalar convective equation, 159
  - truncation of spurious tails in, 167–8, 178
- quasi-simple wave, 15
- Reynolds number
  - for cylindrical  $N$  waves, 190
  - for plane,  $N$  waves, 29
  - for single hump solutions, 25
  - for spherical  $N$  waves, 194
- self-similar solutions
  - definition and classification, 98–103
  - for Burgers equation, 23, 26
  - for Fisher's equation, 103
  - for nonlinear heat equation, 122
  - for nonlinear diffusion problem in plasma physics, 127–32
  - for cylindrically symmetric Burgers equation, 137–40
- simple waves, 8, 15
- singular perturbation techniques, remarks on, 42–4
- stability
  - explicit finite difference schemes, 154–5

246      *Subject index*

- implicit finite difference schemes, 155
- pseudo-spectral finite difference scheme, 161
- self-similar solutions, 109; cylindrically symmetric Burgers equation, 140–7
- separable solutions of the nonlinear diffusion equation of plasma physics, 132–7
- shock centre
  - for cylindrical  $N$  waves, 188
  - for planar  $N$  waves, 183
  - for spherical  $N$  waves, 192
  - numerical, 184
- shock wave displacement due to diffusion, 31, 50
- Waves – diffusive, dispersive and hyperbolic – definition of, 1
