Some important figures and tables *page* x

Preface xi

PART I
GENERAL PRINCIPLES OF CRYSTAL ARCHITECTURE

1 Introduction
Early history 3
The twentieth century 6

2 Interatomic binding forces and atomic structure
Introduction 9
The Rutherford–Bohr atom 12
Application of wave mechanics 15
The electronic structure of the elements 20
The classification of the elements 26

3 The ionic bond and some ionic structures
Introduction 31
Some simple ionic structures 32
Ionic radii 35
The geometrical basis of morphotropy 41
Lattice theory of ionic crystals 45

4 The covalent bond and some covalent structures
Introduction 55
The valence-bond theory 56
Some simple covalent structures 61
Resonance 63
Covalent bond lengths 70
The molecular-orbital theory 75

5 The metallic bond and the structures of some metallic elements
Introduction 79
Some simple metal structures 80
The atomic radii of the metals 86
The Sommerfeld free-electron theory 90
The Bloch theory 94
The valence-bond theory of metals 106

Table of Contents
More information

6 The van der Waals bond
Introduction *page* 111
van der Waals radii 112
Theory of the van der Waals bond 113
The classification of crystal structures 115

PART II
SYSTEMATIC CRYSTAL CHEMISTRY

7 The elements
Introduction 121
The structures of the representative elements 122
The structures of the transition, lanthanide and actinide elements 131

8 The structures of some simple compounds
Introduction 136
AX structures 136
AX_2 structures 145
A_2X structures 163
A_mX_z structures 165
$A_mB_nX_z$ structures 166
Some chemical considerations 175

9 Some structural principles
Introduction 178
Structures as co-ordinating polyhedra 178
Crystal structure and morphology 184
Defect structures 196
Structural 'faults' 205

10 Structures containing complex ions I
Introduction 213
The structure of finite complex ions 215
Free rotation of complex groups 233

11 Structures containing complex ions II
Introduction 234
Borates 234
Silicates 237
Germanates and phosphates 263

Table of Contents
More information

12 The structures of some compounds containing hydrogen

Introduction	*page* 265
The hydrogen bond	265
Hydrates	283
Ammines	301

13 Alloy systems

Introduction	304
Alloys of two true metals	307
The order–disorder transformation	315
Alloys of a true metal and a *B* sub-group element	322
Alloys of two *B* sub-group elements	338
The chemistry of metal systems	340
Interstitial structures	343

14 Organic structures

Introduction	352
Compounds with small or symmetrical molecules	356
Compounds with long molecules	371
Compounds with flat molecules	383
Clathrate compounds	393
Conclusion	397

Appendices

1 Bibliography	398
2 The representation of crystal structures	402

Index 406
