

INDEX

The numbers refer to pages. Reference is made to definitions of terms (on pages indicated here by italic numerals), to topics on which there are exercises, to important ideas that are discussed or mentioned, and to words whose mathematical uses are exemplified or explained. (Certain 'ordinary' English words have special meanings in mathematical contexts, and the correspondence between the words and their meanings is not one-to-one.) Some of the cross-references indicate significant linkages of ideas: the reader may find it instructive to consider the nature of these linkages, and to trace others.

```
Abel, N. H. 88
Abelian group 2, 12, 18, 24, 48, 88,
    94, 108, 116; and see additive,
    character, field, multiplicative,
    ring, unit circle
abstractly identical 90; and see iden-
    tification, isomorphism
accuracy 3, 7, 44, 109, 113; and see
    calculation, computation, error
addition 1, 2, 4, 12, 48, 51, 54, 57, 89,
    97, 108, 117; and see additive,
    laws, plus, pointwise, sum, sum-
    mation, translation
  formulae for the circular functions
    40, 48, 107, 121; and see polar
  for the hyperbolic functions 21
  modulo 2, 17, 56
  table 25
  the same as subtraction 24; and see
    symmetric difference
additive function 18, 19, 30-1; and
    see endomorphism, isomorphism,
  group of a ring 13, 18, 73, 89
  notation 18, 23, 88; and see minus,
    plus, zero
additivity of number 87; and see
    pigeon-hole principle
  of the integration process 78-9,
    109, 113, 118
adjoining a square root 93
adjoint 32
affine geometry 29
