<i>Prologue</i>	ix
Introduction	1
1 Scientific abstractions	5
A one-to-one mapping between elements of a scientific abstraction and items in the real world	6
Preservation of topology in the mapping between a scientific abstraction and the real world	9
The brain as a scientific abstractor	11
Elegance	12
Deep scientific abstractions	14
2 The nature of explanation	17
Scientific explanations are determinate answers to ‘how’ questions	18
Predictions	22
Explaining the human figure	24
Standardized scientific explanations	25
A formalized scientific explanation	27
Configurational explanations	30
3 Configurational explanations	33
Templets	34
Programs of configurational explanation	39
4 Temploting	47
All patterns can be completely temploted	48
Certain patterns must be completely temploted	55
Q: the temploting index	58
5 Self-assembly	60
Self-assembly in general	60
Self-assembly in the biological world	61

viii *Contents*

6	Rules for configurational explanations	68
7	Simple, complex and random	72
	The complexity of patterns	73
	Formal definitions of complexity	75
	Maximally complex patterns	78
	Random patterns	78
	Life	81
8	Reductionism	85
	Reduction of a nonanalytic expression: the pendulum and the robot	87
	Templets	90
	The arrow of templeting	91
	Templeting and the creative act	95
	Conclusions	96
	Appendix: A pattern theoretic formalization	98
	A formalized scientific abstraction	98
	Configurational explanations	101
	Counting configurations	108
	Parsimonious explanations	111
	Maximal templets are required to distinguish between a great many possible configurations	114
	A nonstatistical definition of randomness	116
	Quotation index	125
	Subject index	126
