5.	Appendix 1 A selected comparison of attitudes of general workers in three works by age groups	109
5.	Appendix 2 A selected comparison of attitudes of general workers in three works by previous occupation	110

## Acknowledgements

---

This study was financed by a grant from the Social Science Research Council and administered by the Department of Applied Economics, Cambridge University, and we are grateful to both of these bodies. The Company, which wishes to remain anonymous, gave every assistance and we wish that we could thank by name the many people who gave so generously of their time. The shop stewards, too, overcame their initial suspicions and helped us freely and we would like to thank them most warmly. As is always the case with studies based on field work, we owe a special debt to the men who cooperated in the interviews and talked so enthusiastically and willingly to us. We could not have carried out the study without our loyal interviewing team, which included: Kathleen Carter, Helen Forman, Peter Hobbs, Constance Oliver, Bridget Rees, and Olwen Smith.

Christine Craig supervised the interviewing and was also largely responsible for the coding and analysis of that part of the study. Alex Easterbrook also gave considerable help with the analysis and Bill Lampton generously wrote a programme which enabled us to analyse the material on the Imperial College computer. There have been a number of typed versions of the monograph and Christine Dawson of Imperial College and Diane Watkins of the Massachusetts Institute of Technology have been the willing victims of our many changes of mind.

John Goldthorpe, Celia Davies, R. M. Blackburn, A. Stewart and J. Mortimer have made helpful comments on various drafts, but are not, of course, implicated by anything we say.

Finally, we would like to record our great debt to Joan Woodward who sadly did not live to see the final outcome of the work in which she took so much interest.
