Subject Index

- Absolute convergence of a continued fraction, 126
 Accelerating convergence, 327–329
 Approximant of a continued fraction, 17
 Arms, Edrei Theorem, 238
 Associated continued fraction, 7, 129, 241, 388
 Algorithm, 248–249
 Correspondence, 242–247
 Relation to Padé table, 389
 Asymptotic expansions of continued fractions, 342
 Asymptotic expansion of $f(z)$:
 At $z = \infty$, 330
 At $z = 0$, 333
 Attractive fixed point, 52
 Auric theorem (generalized), 173

 Backward recurrence algorithm (BR-algorithm), 26, 351–352
 Stability, 352–355
 Bessel function $J_\nu(z)$, 162
 Convergence, 168, 183–184
 Correspondence, 162–163
 Truncation error analysis, 304–305
 Best element region, 64
 Best value region, 64
 Binet function $J(z)$, 349
 Birth-death process, 365
 Block theorem, 188
 BR algorithm, 26, 351–352

 Cardioid theorem, 134
 Carleman condition, 314, 343
 c.f.g. sequence, 30
 C-fraction, 28, 386
 Correspondence, 156–157
 Chain sequence, 115, 307
 Christoffel numbers, 256
 Classification of l.f.t.'s, 48–53
 $c_{m,n}$ determinants, 189
 Connection with $H_n^{(k)}$, 226
 Complementary error function, 218–219, 348
 Conditional convergence region, 80

 Confluent hypergeometric functions,
 $\Omega(a, b; z)$, 212
 $\Phi(b; c; z)$, 205–206
 $\Psi(c; z)$, 209
 Continued fraction algorithm, 17
 Continued fraction definition, 17
 Continued fraction generating sequence (c.f.g. sequence), 30
 Continued fraction over a normed field, 22
 Continued fraction representations of special function:
 Arcsinh z , 204
 Arcsin z , 203
 Arctan z , 24, 202
 Bessel function $J_\nu(z)$, 168, 183–184, 211
 Binet function, 349
 Complementary error function $\operatorname{erfc} z$, 218–219, 348
 Coulomb wave functions, 215–216
 Dawson integral, 208, 282
 Error function $\operatorname{erf} z$, 208, 282
 e^z , 24, 207
 $F(a, 1; c; z)$, 201
 $\frac{F(a, b; c; z)}{F(a, b+1; c+1; z)}$, 200
 Fresnel integrals, 208, 282
 Gamma function, 348–350
 General binomial $(1+z)^\alpha$, 202
 Incomplete beta function, 216–217
 Incomplete gamma function, 209, 217–218, 347–348
 Integrals of the error function, 218–219
 $\int_0^z \frac{dt}{1+t^n}$, 203
 $\log(1+z)$, 24, 203
 $\log\left(\frac{1+z}{1-z}\right)$, 203
 Plasma dispersion function, 219
 $\frac{P_\alpha^m(z)}{P_\alpha^{m-1}(z)}$, 215
 $\frac{Q_{\alpha+n}^m(z)}{Q_{\alpha+n+1}^m(z)}$, 205
 $\tan z$, 211
 $\tanh z$, 211
 $\Phi(1; c; z)$, 207, 281–282

- $\frac{\Phi(b; c; z)}{\Phi(b+1; c+1; z)}$, 206, 278–281
 $\frac{\Psi(c; z)}{\Psi(c+1; z)}$, 209–210
 Contraction map, 301
 Contraction of a continued fraction, 38
 Convergence neighborhood, 108
 Convergence neighborhood theorem, 108
 Convergence regions, 13
 Converging factors, 298
 Correspondence (at $z=0$), 148–149
 Three-term recurrence relations, 160–161
 Correspondence (at $z=\infty$), 150
 Coulomb wave functions, 215–216
 Critical point, 307

 Dawson integral, 208, 282
 Determinant formula, 20
 Difference equations, 20
 Dominant solution, 163
 Dual continued fraction, 56

 Element region, 64
 Elements of a continued fraction, 17
 Elliptic l.f.t., 52
 Equivalence transformation, 33
 Equivalent continued fractions, 31
 Error function, 208, 282
 Even part, 41
 Extended field, 21
 Extension of a continued fraction, 38, 43

 $F(a, b; c; z)$, 199
 FG algorithm, 268–269
 Computation of zeros and poles, 273–275
 FG table, 268
 fLs, 148
 Formal Laurent series (fLs), 148
 Formal Newton series (fNs), 195
 Formal power series (fps), 148
 Forward recurrence algorithm (FR algorithm), 26, 351
 fps, 148
 FR algorithm, 26, 351
 Frank continued fraction, 392
 Fresnel integrals, 208, 282
 Function meromorphic in D , 131
 Fundamental inequalities, 125

 Galois theorem (generalized), 56
 Gamma function, 348–350
 Gauss continued fraction, 200
 Gaussian quadrature, 255–256

 General T-fraction, 130, 257, 390–391
 Connection with FG algorithm, 266–272
 Connection with M -fraction, 391
 Convergence, 140, 141, 142, 275–276
 Correspondence, 258–266
 Relation to two-point Padé table, 391–392
 Representation of functions, 275–282
 Generate (a sequence of l.f.t.'s), 27
 G -fraction, 335, 390
 g -fraction, 129, 240–241, 387
 Convergence, 138
 Truncation error bounds, 318–319
 g -table, 240

 Hankel determinants $H_k^{(n)}$, 223
 Connection with $c_{m,n}$, 226
 Hankel determinants $\mathcal{H}_k^{(n)}$, 261
 Hermite interpolation, 14, 186
 H -fraction, 335, 387
 $H_k^{(n)}$, 223
 $\mathcal{H}_k^{(n)}$, 261
 Hurwitz criterion for stability, 295–296
 Hurwitz (or stable) polynomial, 283
 Necessary and sufficient conditions, 290, 293, 295–296
 Hyperbolic l.f.t., 52
 Hypergeometric function $F(a, b; c; z)$, 199
 Continued fraction representation, 199–202
 Hypergeometric series, 5

 Idempotent, 69
 Inclusion region, 297–299
 Incomplete beta function, 216–217
 Incomplete gamma function, 209, 217–218, 347–348
 Indifferent fixed point, 52
 Integral part of positive para-odd function, 287
 Integral representations of continued fractions, 337–340
 Integrals of the error function, 218–219

 Jacobi identity, 229
 J -fraction, 129, 249, 389
 Connection with associated continued fraction, 249–250
 Connection with orthogonal polynomials, 250–255

 Kummer function, 206

E:

- Field of fLs, 148
- Laplace transform, 366
- Legendre functions of the first kind $P_\alpha^m(z)$, 214
- Legendre functions of the second kind $Q_\alpha^m(z)$, 204
- l.f.t., 26
- Limit-circle case, 66
- Limit periodic continued fraction, 107
 - $K(a_n/1)$, 113
- Limit-point case, 66
- Linear fractional transformation (l.f.t.), 26
- Loxodromic l.f.t., 52

- \mathfrak{R} , 151
- Markoff theorem, 256, 344
- $M(b; c; z)$, 206
- Mechanical quadrature, 6, 7
- Meromorphic function, 131
- Metric theory of continued fractions, 4
- M -fraction, 130, 391
- Minimal solution, 163, 397
 - Numerical instability, 167–169, 397
- Modified regular C -fraction, 333–334, 387
- Modified S -fraction, 334, 387
- Moment problems,
 - Hamburger, 331
 - Stieltjes, 331
 - Strong Stieltjes, 332
- Moment theory, 8, 9
 - Solutions of moment problems, 342–343
- (M, N) -normal, 236
- de Montessus de Ballore theorem, 194
- Multiple parabola theorem, 106

- Necessary conditions for convergence, 78
- Newton-Padé approximants, 195–196, 394
- Norm, 21
- Normal fps, 189
- Normal Padé approximant, 188
- Normed field, 21
- n th denominator, 20
- n th numerator, 20

- Odd part, 42
- Order of correspondence, 149
- Orthogonal polynomials, 6, 7, 250–255

- $P_\alpha^m(z)$, 214
- Padé approximant, 187
- Padé table, 7, 187

- Parabola theorem, 105
- Parabolic convergence regions, 13
- Parabolic element regions, 75
- Parabolic l.f.t., 49
- Paraconjugate, 283
- Para-odd, 285
- Partial denominator, 17
- Partial numerator, 17
- Periodic continued fraction, 46
- P -fraction, 159, 390
 - Correspondence, 159–160
 - Relation to Padé table, 193, 390
- π -fraction, 317
 - Truncation error bounds, 318–319
- Pincherle theorem (generalized), 164, 403
- Plasma dispersion function, 219
- Polya frequency (PF) series, 237
- Positive definite J -fraction, 129, 389
 - Convergence, 138
 - Truncation error bounds, 325–326
- Positive rational function, 284
- Positive T -fraction, 130, 391
 - Convergence, 146
 - Truncation error bounds, 316–317
- Pringsheim convergence criterion, 92
- $\mathcal{P}(\{\xi\})$, 302

- $Q_\alpha^m(z)$, 204
- Queuing problem, 374
- Quotient-difference (qd) algorithm, 228–235
 - Computation of zeros and poles, 233–235
- Quotient-difference table (qd -table), 227–228

- Rational expression, 185
- Real J -fraction, 130, 389
 - Truncation error bounds, 326–327
- Region, 64
- Regular C -fractions, 7, 129, 386
 - Connection with qd -algorithm, 228–233
 - Convergence, 131–132, 182–183
 - Correspondence, 222–227
 - Relation to Padé table, 190–191, 387–388
- Regular continued-fraction expansion, 2, 22
- Repulsive fixed point, 52
- RITZ fraction, 387
- $\mathfrak{R}(\xi)$, 326

- Schoenberg, Karlin Theorem, 237
- Schur continued fraction, 392
- Seidel-Stern theorem, 87
- Sequence of convergence regions, 78

Cambridge University Press
