## Contents

*Preface*  
xi  
*List of abbreviations*  
xiii  

1 Introduction: the problem, incidence, etiology. A working hypothesis  
1  
2 Biology of the esophagus  
4  
Structure of the normal esophagus  
4  
Functioning of the esophagus  
11  
Cell replication and differentiation  
13  
Biochemistry and histochemistry of the esophagus  
14  
3 Esophageal carcinogenesis  
20  
High-risk diseases  
20  
Precursor lesions and histopathology in experimental animals  
26  
Morphogenesis of tumors in experimental animals  
28  
Precursor lesions and histopathology in man  
34  
4 Epidemiology  
47  
Introduction  
47  
Epidemiology at global level  
49  
Urban/rural distribution  
50  
Sex ratios  
52  
Genetics  
52  
Time trends  
52  
Adenocarcinoma  
53  
Epidemiology at national level  
55
## Contents

5 Chemicals carcinogenic for the esophagus: the nitrosamines 69

*Experimental studies: N-nitroso compounds* 69

Introduction 69

Carcinogenicity of *N*-nitroso compounds 71

Mechanism of carcinogenicity of *N*-nitrosoamines 76

*Exposure to *N*-nitroso compounds and risk assessment* 84

Formation of *N*-nitroso compounds in the environment 84

Occurrence of *N*-nitroso compounds in relation to incidence of esophageal cancer 87

*In vivo* formation of *N*-nitroso compounds from precursors in food 96

Hazard presented by betal quid chewing 99

Risk assessment 104

6 Alcoholic beverages and tobacco 117

Introduction 117

Epidemiological evidence 120

Alcohol-related occupations 126

Between-country comparisons 127

A ‘safe’ level of consumption? 128

Evidence for the carcinogenicity and genotoxicity of ethanol 128

Non-ethanolic constituents of alcoholic beverages 129

Metabolism of ethanol and higher alcohols 137

Effect of ethanol on carcinogenicity of nitrosamines 141

Effect of ethanol and higher alcohols on nitrosamine metabolism 145

Effect of alcohols on DNA alkylation by nitrosamines 148

Effect of ethanol and higher alcohols on basal cell replication 150

Effect of alcohol consumption on nutrition 154

Possible mechanisms involved in causing esophageal cancer 157

7 Plant products: phenolics, tannins, tea 170

Simple phenolics 170

Tannins 177

Tea 186
## Table of Contents

8 **Plant products: opium, silica, bracken, dihydrosafrole** 196  
   Opium 196  
   Silica 199  
   Bracken 205  
   Dihydrosafrole 213  

9 **Molds and mycotoxins** 221  
   Introduction 221  
   Properties of molds implicated in esophageal cancer 222  
   Properties of mycotoxins implicated in esophageal cancer 223  
   Toxicoses in livestock and experimental animals 226  
   Epidemiology and carcinogenicity 228  
   Animal studies 232  
   Fungal esophagitis 234  
   Esophageal cell culture studies 235  
   Mechanisms involved in association of mycotoxins with  
   esophageal cancer 235  

10 **Dietary deficiencies: micronutrients, fresh plant food and  
   protective factors** 247  
   Introduction 247  
   Specific micronutrients 248  
   Dietary deficiencies and epidemiology 258  

11 **Possible mechanisms involved in carcinogenesis** 272  
   Molecular mechanisms 272  
   Genetic changes 274  
   Future prospects 276
