

## INDEX

- abstraction reactions, 8, 40, 97, 113–30,  
 169, 170  
 activated complex 7, 95, 119–20  
 activation energy of reactions 46, 64, 95,  
 99, 100, 119–20  
 activation-controlled reactions 99, 101, 102,  
 115, 119–20, 130  
 addition reactions 9, 97–8, 113–30  
 amplitude of the asymmetry 22, 24, 27, 31,  
 36–45, 143, 156  
 analogue detectors 29  
 analysis of data 36–49  
 analytical tool based on  $\mu^-$  154, 156  
 anisotropy 21, 136, 147  
 annihilation 6, 7, 52  
 antimatter 2, 5, 147  
 antimony 5  
 antimuonium 17, 163  
 antineutrinos 10  
 anti-inhibition 86  
 apparatus for  $\mu$ SR 11, 21, 30, 31, 76, 97,  
 110, 136  
 aqueous solutions 108–30  
 Arizona beam 18  
 Arrhenius parameters 46, 97, 99–104, 116–  
 22  
 artificial atoms 4, 5, 149–58  
 asymmetric decay 10  
 atomic capture probabilities 150–8  
 Auger transitions 153, 158  
  
 background, time-independent 22, 24, 31,  
 36, 51, 155, 156  
 background relaxation ( $\lambda_0$ ) 38, 46–7, 95,  
 109, 163, 164  
 backward muons 19, 56, 58, 109, 136, 152  
 beat frequency 39, 47  
 BEBO calculations 119–20  
 beta decay 10  
 biologically-important systems 127–30  
  
 biradicals 137  
 Bohr radius 4, 6, 20, 118, 149, 150  
 bond energy 64  
 Born–Oppenheimer approximation 3, 59,  
 87, 103, 120  
 Breit–Rabi diagram 24, 25, 135  
 Bronsted–Bjerrum treatment 110–13  
  
 caging effect of solvent 115, 117, 127  
 cancer therapy 158  
 Cerenkov reabsorption spectroscopy 53,  
 164  
 charge conjugation 10, 152, 154  
 charge-exchange cycles 59–61, 64, 71, 73,  
 77, 78, 84, 87–90, 152  
 charmonium 5  
 chemical reactions 8, 9, 29–34, 40–5, 71,  
 97–105, 108–30, 145, 169, 170  
 chemical reactivity of Mu 38, 54, 95–130  
 chemical shifts 12, 22, 50, 62, 163  
 chlorinated methanes 67  
 classical interactions 103, 105  
 coherent oscillations 22, 27, 36, 37  
 coherent precession 40  
 collinear encounters 103  
 collision duration 95  
 collisional broadening 46  
 comparison of atoms and pseudo-atoms  
 50–6  
 conformers, steric hindrance 140  
 contaminants in beams 19, 30, 34, 56  
 conversion  $\mu^+ \rightarrow \text{Mu}$  41, 58–92  
 counting statistics 97  
 coupling with other magnetic nuclei 28,  
 134, 135  
 CPT conservation 10, 154  
 critical micelle concentration 85, 127–9  
 cross-sections 59–61, 69  
 cross-sections for reaction 102–5  
 crystallization 91–2, 147

176 *Index*

- cyclams 123–4  
 cyclodextrins 129–30  
 cyclohexadienyl radicals 138, 142, 145–7, 171, 172  
  
 data acquisition 32, 34  
 data analysis, coincidence 20  
 de Broglie wavelength 20, 89  
 decay of diamagnetic species 69  
 deoxygenation 47, 109, 115, 136  
 dephasing of the precession 37, 46, 57, 71, 144  
 deuterium analogues 99, 102, 104, 140  
 diamagnetic electron environments 12, 22, 61  
 diamagnetic states 38, 58–92  
 dielectric constant effects 64, 74–5, 84  
 difference-sum method 31  
 diffusion 8, 50, 60, 90–2, 115–19, 161  
 diffusion-controlled limit 46, 52, 114–19, 130  
 digital detectors 29  
 dihedral angle 138, 140  
 dimuonium ( $\text{Mu}_2$ ) 30  
 dipolar broadening 46, 50  
 d.c. or continuous mode 16, 29  
 discriminators 34  
 DNA and constituent nucleotides 130  
 double bonds 65, 66, 72, 125–7, 136  
 double electron muon resonance (DEMUR) 34  
  
 elastic scattering 59  
 electric field gradients 75–6, 85  
 electron Larmor frequency 28, 43, 134  
 electron spin flips 98, 123  
 electron survival probabilities 74–5, 81, 84, 85  
 electron transfer 90, 98, 110, 113, 114  
 electron-spin exchange reactions ( $^1\text{Mu} \rightarrow ^3\text{Mu}$ ) 8, 9, 31, 32, 34, 40, 45, 90, 97, 98, 104, 105, 113–30  
 elementary particles 5, 12  
 encounter frequency 95, 98, 101, 102, 110–19, 127  
 encounter pair 115  
 energy transfer 69  
 enhancement of  $A_D$  and  $P_D$  40–3  
 epithermal reactions 59, 77, 84, 96, 109, 143  
 error limits 109, 166  
 ESR 8, 38, 50, 52, 55, 133  
 expanding track model 90–2  
  
 Fermi–Teller  $Z$  law 151–6  
 fitting equation, general 36  
 fluorescence 53  
 forward muon beam 19, 56  
  
 Fourier transform spectra 28, 29, 126, 136–42, 146  
 fractional yields ( $P$ ) 45, 58–92, 166–8  
 free electrons 78–9, 81–2, 85, 89  
 free ion yields 74–5, 78–9, 81, 91  
 free radicals containing Mu 12, 26–30, 38, 43–4, 66, 71, 76, 125, 126, 133–47, 170–2  
 free  $\mu^+$  ions 61  
  
 gas phase reactions 95–105  
 geminate neutralization 74–5, 78–9, 81, 91  
 geometric vector presentation 24, 26  
 $G$ -values 56, 66  
  
 halogen acids 71, 100, 101  
 halogenation 66, 67, 72, 85  
 halogens 97, 98, 100, 101  
 Heisenberg spin–exchange interaction 90, 98  
 helicity 18  
 high-energy accelerators 9, 33, 34  
 high spin complexes 121–4  
 historical perspectives 10–15, 58, 95–7, 109, 133–4, 151, 161  
 homonuclear diatomic substrates 97–105  
 hot model 62, 64, 77–8, 80–1, 86, 90–2  
 hot-atom reactions 59, 61, 62, 64, 67, 69, 71, 73, 76, 77  
 Huff factors 154  
 hydrated electrons 50–6, 110, 113–15, 118  
 H-atom reactions 8–9, 50–6, 95, 96, 108, 113–15  
 hydrogen-bonding effects 64, 86  
 hyperfine coupling constants 8, 12, 26–30, 38, 43, 44, 133–47, 170–2  
 hyperfine interaction 10, 24, 29, 84, 157, 162  
 hyperfine quadrupolar precession 162  
 hyperfine field ( $H_h$ ) 32, 98  
 hyperfine period 40  
 $h_D$  79–86  
 $h_M$  79–86  
  
 imperfect mixtures 69  
 impurity centres 50, 161  
 inclusion compounds 129–30  
 inelastic scattering 59  
 inert salt effect 110–13, 123–4  
 inhibition of Mu 79–88  
 initial phase 26, 37, 42, 96, 97  
 interaction cross-sections 102–5  
 interaction potentials 103–4  
 interaction radii 116–18  
 interconversion of Mu and  $\mu^+$  40–3, 58–92  
 internal dynamics 139, 140  
 internal fields 16  
 intramolecular rearrangement of radicals 142

- intraspur reactions 62, 74, 75, 78–88  
 inverse isotope effects 99, 119, 120  
 ionic processes 64, 69, 109  
 ionic reactions 143  
 ionic strength effect 110–13  
 ionization energy 4, 6, 7, 20, 59, 63, 64, 73, 87, 149  
 ion-pairs 78–9  
 isotope effects 4, 7, 43, 44, 95–130, 137, 139, 140  
 isotopes 3, 4, 5, 7, 149, 158  
  
 kaons 5, 150, 152  
 kinetic spectroscopy 52, 53, 55  
 kinetic theories 98–105  
 Knight shifts 50, 161  
  
 Lamb shift 163  
 Larmor precession 16, 22, 24  
 laser stimulation 30  
 LEPS model 103  
 lepton family I, 149  
 lifetime histograms 3, 21, 22, 23, 27, 37, 51, 111  
 ligand field strengths 121–4, 129–130  
 line broadening 136, 145  
 linear energy transfer (LET) 56, 78, 79, 85, 89, 164  
 longitudinal field studies 16, 17, 30–4, 46, 96–8, 123  
 lost polarization 45, 89–92  
 low spin complexes 121–4  
 Lyman series 153  
  
 magnetic field inhomogeneities 46  
 magnetic moments 10, 135–47  
 maximum asymmetry 44, 45  
 mechanism of Mu formation 77–89  
 mechanism of reaction 113–15  
 mesic atoms 5, 6, 158  
 meson factory's efficiency 157  
 micelles 127–9  
 MINUIT 25  
 missing fraction 45, 58, 77, 84, 89–92, 109, 144, 145  
 mobility of electrons 74–5, 89, 118–19  
 mobility of positrons 89  
 moderating medium 97, 109  
 molecular excitations 59, 78, 88, 152  
 moment of inertia 44, 139  
 monomers 125–7, 137, 141, 142, 145  
 muonium 5  
 muium 5  
 multichannel analyser 21  
 multichannel transient digitizers 29  
 mumuonium 5  
 muon nuclear capture 150–7  
 muon production 1, 2, 17–20, 152  
  
 muon spin polarization 3, 10, 58  
 muon spin relaxation 16, 30–4, 96  
 muon spin resonance 16, 34, 96  
 muon spin rotation 12, 16, 20–2, 37–8, 96, 157, 164  
 muon thermalization 2, 59–92  
 muon tracks 59, 62, 74, 89–91  
 muonic atoms 5, 6, 17, 149–58  
 muonic hydrogen 5, 6, 149–58  
 muonic molecules 153, 154  
 muonium electron orbitals 3  
 muonium formation 58–92  
 muonium free radicals (Mu-radicals) 12, 26–30, 38, 43–4, 66, 71, 76, 125, 126, 133–47, 170–2  
 muonium, fundamental properties 3–4, 10, 12, 20, 24  
 muonium on surfaces 163  
 muonium spin rotation (MSR) 23–6, 38–40  
 muons, fundamental properties 1–3, 10–14, 19, 22  
  
 negative muons 12, 17, 34, 149–58  
 neutrality of Mu 110–13  
 neutrinos 10  
 neutron-like atoms 149, 158  
 NMR 50  
 noble gases 61, 63, 72–3, 77, 78, 84, 92, 162, 163  
 non-homogeneous reactions 47, 89–92  
 nuclear fusion 156, 157  
 nuclear moment of the muon 10, 19, 133–47  
 nuclear probes 133, 150, 157, 161–3  
 nuclear Zeeman effect 146  
  
 observational time-window 36–8  
 Onsager critical escape radius 75  
 on-line fitting 34  
 ORE gap model 60, 87–8  
 organic materials 124–30, 137–47  
 orientational factors 8, 95, 120  
 origin of optical activity 162, 164  
*ortho/meta/para/ipso* addition 141, 172  
*ortho*-positronium 6, 52  
 oxygen effect 47, 109, 115, 136, 158  
  
 paramagnetic solutions 37, 121–4, 137  
*para*-positronium 6, 51  
 parity-invariance principle 3, 10  
 partition coefficients 119–20  
 Paschen Bach limit 134  
 penetration by surface muons 18–19  
 phase angle 24  
 phase effects 63, 64, 72, 76, 77, 91–2, 162  
 photomultiplier saturation 29  
 pick-off reactions of Ps 7  
 pick-up reactions 59, 60

178 *Index*

- pionic hydrogen 5, 6, 158  
 pionium 5  
 pions, 1, 17, 18, 150, 152, 158  
 polymerization 125, 127, 142  
 porphyrins 129, 130  
 positron annihilation 6–8, 50–6, 75  
 positron telescope 11, 20, 21, 34  
 positronium 4, 5, 6–7, 8, 50–6, 75, 78, 85,  
 86, 87–9, 113–15, 118  
 potential surfaces 103–4  
 precession of muon spin 11, 22, 26, 36, 37,  
 39  
 precession frequency 3, 20, 22, 24, 111,  
 135  
 protection 68–70  
 protium 3–5, 8, 9, 12, 50–6, 60, 61  
 proton transfer 61, 79, 84, 114  
 pseudo-first order rates 26, 38, 55, 96, 109  
 pulse radiolysis 50–6, 83  
 pulsed mode 16, 29–30, 38, 46, 47, 164
- quantum chromodynamics 6  
 quantum mechanical tunnelling 8, 89, 95,  
 96, 99, 101–5, 118–21, 130, 143, 157,  
 161  
 quantum resonance approach 104  
 quarks 3, 4, 5, 12  
 quantum electrodynamics 163  
 quarkonium 6  
 quartz 162
- radiation chemical yields in  $\mu$ SR 47, 55, 56  
 radiation tracks 59, 62, 66, 74, 87–91  
 radical cations or anions 137, 143  
 radiochromatography 55  
 radiolysis effects 55, 56, 59, 66, 69, 74, 75,  
 78–91  
 random phase approximation 105  
 randomizing of spins 41  
 reaction rate constants 38, 52, 95–130,  
 169–70  
 recoil tritium 50–6, 141  
 reduced masses 3, 4, 95–6, 102, 149, 150  
 reduced moment of inertia 139  
 reduction potential 114, 163  
 reduction reactions 8, 113–30  
 references 9–10, 14–15, 34–5, 47–9, 56–7,  
 92–4, 106–7, 131–2, 147–8, 159–60,  
 164–5, 173–4  
 related techniques 50–6  
 residual polarization 11, 12, 41, 43, 109,  
 134  
 response-time of detectors 143, 144, 163  
 rest mass of pion 1  
 Rydberg states 110, 152
- saddle points 101, 102  
 salt effect, primary kinetic 110–13
- saturated hydrogenated compounds 64,  
 72–5, 78, 90  
 scintillation counters, 20, 21  
 secondary electrons 78, 87–8  
 selectivity in radical formation 137, 138,  
 140–5  
 single crystals 135, 147  
 single photon spectroscopy 7  
 solid state physics, 7, 31, 34, 50, 157,  
 161–3  
 solution kinetics 108–30  
 solvated electrons 50–6, 110, 113–15, 118  
 solvating power effects 64, 73–5  
 solvation time 60, 79  
 spin Hamiltonian 43, 134  
 spin state 98, 121–4  
 spin-lattice relaxation 31, 46, 162, 163  
 spur effects 47, 55  
 spur model 62, 74, 78–92  
 steady-state approximation 115  
 Stokes–Einstein relationship 118  
 stopping region 96–7  
 stroboscopic interregative method 53  
 stroboscopic  $\mu$ SR 164  
 strong interaction 6  
 substitution reactions 9, 98  
 surface beams, 18, 56, 58, 97, 109, 136  
 surfactants 127–9
- techniques of  $\mu$ SR 16–34  
 terminal spurs 62, 78–89  
 tetrachlorides 64, 65  
 theory 98–105, 161  
 thermalization 60, 64, 90, 96  
 third body effects 64, 96, 98  
 time-dependence of polarization 22, 24, 39,  
 40  
 time-dependent rate constants 117  
 time resolution of equipment 143, 144, 163  
 time reversal 10  
 titration curves 41, 42  
 total cross-sections 60  
 transition metal ions 121–4, 129–30  
 transition state theory 7, 99–105, 119–20  
 transverse versus longitudinal fields 45–6  
 triple bonds 65, 66  
 triplet splitting 25  
 tritium 4, 8, 50–6, 141  
 TRIUMF cyclotron 33, 34  
 two-frequency precession 39, 47, 96
- unsaturation 65, 66, 72, 76, 125–7, 136
- velocity, mean relative 95, 108, 118  
 vibrating adiabatic model 103, 119  
 vibrational and rotation energy 7, 95, 120,  
 139–40  
 vinyl monomers 125–7, 137, 141, 142, 145

viscosity effect 108, 117, 130  
volume fractions 68–70

weak interaction 10, 21

X-ray emission 150, 153–6

yields of muon states 3, 26, 44–5, 58–92,  
143–5, 166–8

zero-field studies 30, 31, 43, 145  
zero-point vibrational energy 7, 8, 44, 96,  
99, 101, 102, 119–20, 139–40

$\delta$ -rays 78, 88

$\pi$ -bonding and delocalization 65, 66, 72, 76,  
125–7, 136, 141
