## Subject index

Individual compounds or groups of compounds are mentioned in this Index only if some features of their behaviour have received special mention in the text. Individual compounds are listed in the following Compound Index. The letter *A* indicates that a topic is referred to in the Appendix.

- acetic anhydride, reaction with nitric acid, 76–7, 79–82; solvent in nitration, 1, 2, 76
- acetoxylation, accompanying nitration, 77, 82, 87, 88–9, 90, 104–5, *A*
- acetyl nitrate, 1, 76, 80; addition to olefins, 83; protonated, 94, 103–4
- acidity functions, and mechanism of nitration, 21–5, 28; and nitration of bases, 147–53, 158–9, 191
- activity coefficients, of aromatic compounds in strong acids, 17–20, 24–5; of transition states, 17
- additivity principle, 27, 184–8, 189
- alkyl groups, activating effect, 163–5, 184–6
- aromatic compounds, activity coefficients in strong acids, 17–20; solubilities in sulphuric acid, 18
- aromatic hydrocarbons, basicities of, 113–14
- aromatic reactivity, and molecular orbital theory, 129–35; definition of, 122–5; electrostatic theories, 135–6; indices of in M.O. theory, 130–5; nitration and, 123–5
- Arrhenius parameters, and nitration of bases, 155–9; for nitration of azanaphthalenes, 209–11
- bases, nitration of, 16, 25, 146–61; criteria for determining reacting species, 146–61
- benzoyl nitrate, 77–9
- charge density,  $\pi$ -electronic, 130–1
- competition method, in nitrations with acetyl nitrate in acetic anhydride, 76, 82; in nitrations with nitronium salts, 62–72; in nitrations with 1-nitropyridinium salts, 73; mixing and, 62–72
- complexes, in nitration,  $\pi$ , 117–20, *A*;  $\sigma$ , 112–14, 131
- dinitrogen pentoxide, nitration with, 51–4, 78, 101–2; solution in acetic acid, 79; solution in carbon tetrachloride, 51 52; solution in nitromethane, 52; solution in sulphuric acid, 51; state in sulphuric acid, 13, 51
- dinitrogen tetroxide, and nitrosation, 97; and nitrous acid, 55, 56; complexes with Lewis acids, 50; in sulphuric acid, 50, 59
- dinitrogen trioxide, 50, 56
- electromeric effect, 127
- electronic theory of organic chemistry, 125–9; nitration and, 3–4
- electrostatic theories, of aromatic reactivity, 135–6
- encounter pair, 119–20
- encounter rate, reaction at, and aromatic reactivity, 124–5
- encounter rate, nitration at, and aromatic reactivity, 124–5, 191; and intramolecular selectivity, 119–20; and nitration of bases, 154, 215; and nitrosation, 60, 204; in acetic anhydride, 86; in organic solvents, 46–8; in perchloric acid, 27–9; in sulphuric acid, 27–9, 69
- field effect, 125, 126–7, *A*; and nitration of positive poles, 168–76
- Hammett's equation, and substituent effects, 137–43
- heteromolecules, 130
- Holleman's product rule, 3
- hyperconjugation, in nitration of alkylbenzenes, 165–7; in nitration of positive poles, 169
- inductive effect, 125–6, 135, *A*; and nitration of positive poles, 168–76, *A*
- inductomeric effect, 127–8
- isolated molecule theory, 127–9, 129–31
- isomer proportions, and nitration at the encounter rate, 119–20; in nitration of acetanilide, 96, 97; in nitration of alkylbenzenes, 64, 164; in nitration of

isomer proportions, *Cont.*

anilinium ion, 170, 174–6; in nitration of anisole, 57, 94–6; in nitration of azanaphthalenes, 209–11; in nitration of benzamide, 177, 178; in nitration of benzoic acid, 177, 178; in nitration of benzonitrile, 177, 178; in nitration of benzyl chloride, 100, 166; in nitration of benzyl cyanide, 100, 166; in nitration of benzylic compounds, 166; in nitration of benzylidene trifluoride, 68, 166; in nitration of benzyl methyl ether, 100–3, 166; in nitration of biphenyl, 200; in nitration of compounds with dipolar substituents, 178–9; in nitration of ethyl benzoate, 177, 178; in nitration of ethyl phenylacetate, 100, 166; in nitration of halogenobenzenes, 64, 181; in nitration of methyl 2-phenethyl ether, 99–103; in nitration of methyl 3-phenpropyl ether, 100–3; in nitration of naphthalene, 204–5; in nitration of nitrobenzene, 68, 177, 178; in nitration of phenethynyl compounds, 183; in nitration of phenol, 57, 96–8; in nitration of phenylboronic acid, 98–9; in nitration of phenylnitromethane, 100, 166; in nitration of positive poles, 167, 170–1; in nitration of quinolinium ion, 209, 212; in nitration of styryl compounds, 183; in nitration of substituted-alkylbenzenes, 166; in nitration of toluene, 64, 73, 100

isotope effects, hydrogen, 16, 94, 109–12, 114–16; and reactivity of electrophiles, 142–3

linear free energy relationships, 138–43; and selectivity, 140–3;  $\rho^+\sigma^+$  equation, 138–43, 194–6

localisation energies, 132–5; and nitration of azanaphthalenes, 213–14; and nitration of benzimidazole, 218

mercuration, and reactivity, 142–3

mesomeric effect, 125, 127

mixing, and the competition method, 62–72

molecular orbital theory, and ammonio group, 174–6; and aromatic reactivity, 129–35, 174–6, *A*; and azoles, 194; and benzimidazole, 218; and methyl group, 165, 188; and pyridine, 193; and pyridine 1-oxide, 193; and quinoline, 212–14; and quinoline 1-oxide, 217

nitrate ion, anticycatalyst for nitration, 8, 41, 42–6, 56, 89; ultraviolet spectrum of, 20–1

nitration, and aromatic reactivity, 123–5; and Friedel–Crafts reaction, 2; and  $\rho^+\sigma^+$  correlations, 194–5; and theoretical organic chemistry, 3; anticycatalysis by nitrate ion, 8, 41, 42–6; anticycatalysis by nitrous acid, 12, 54–7, *A*; nitration, at encounter rate, 27–9, 46–8, 68, 69; history of, 1; kinetics of, 8–12, 15–26, 27–9, 32–48; of alkylbenzenes, 163–7; of azanaphthalenes, 207–17; of azoles, 193–4, 217–18; of bases, 16, 146–61; of benzylic compounds, 165–7; of bicyclic compounds, 199–206; of biphenyls, 199–203; of compounds containing boron, 182; of compounds containing silicon, 182–3; of compounds with dipolar substituents, 176–80; of di-substituted benzenes, 183–8; of halogenobenzenes, 180–2; of heterocyclic compounds, 190–4, 206–18; of monosubstituted benzenes, 163–83; of naphthalenes, 203–6; of phenethynyl compounds, 183; of polychlorobenzenes, 189; of polycyclic hydrocarbons, 2, 82, 114, 133–5, 206; of polymethylbenzenes, 189; of poly-substituted benzenes, 183–4, 189–90; of positive poles, 167–76; of pyridine 1-oxides, 192–4; of pyridines, 190–3, 206–7; of quinolines, 207–17; of styryl compounds, 183; reagents for, 1–3; *via* nitrosation, 2, 50, 57–60, 96–8

nitration, by nitronium ions, intermediates in, 112–14; isotope effects, 109–12; mechanism, 108–16;  $\pi$ -complexes in, 117–20;  $\sigma$ -complexes in, 112–14; solvent effects, 108–9; steric effects in, 114–15

nitration with acetyl nitrate, 85

nitration with acetyl nitrate in acetic anhydride, 1, 2, 76, 78, 79–105, *A*; and high *o:p* ratios, 76, 93–103; kinetics, 85–92, *A*; mechanism, 103–5

nitration with benzoyl nitrate, 77–9, 94, 101, 116

nitration with dinitrogen pentoxide, 51–4, 78, 96, 116–17; and high *o:p* ratios, 76

nitration with dinitrogen tetroxide in sulphuric acid, 50

nitration with nitric acid, 6–12, 56

nitration with nitric acid in acetic acid, 32–48, 55–6

[More information](#)*Subject index*

- nitration with nitric acid in carbon tetrachloride, 32–8, 46, 87, 88; at encounter rate, 46
- nitration with nitric acid in nitromethane, 32–48, 55–6, 87, 88; at encounter rate, 46–8, 60
- nitration with nitric acid in perchloric acid, 25, 27–9, 47; at encounter rate, 27–9, 47, 48
- nitration with nitric acid in sulpholan, 32–48, 87, 88; at encounter rate, 46–8, 60
- nitration with nitric acid in sulphuric acid, 13–25, 27–9, 123; and  $\sigma^+$  constants, 140; aromatic reactivity and, 123–4; at encounter rate, 27–9, 47, 48; effect of additives on, 18–19; effect of water on, 15, 21–5; of bases, 146–61; rate profiles for, 17, 20, 23, 24, 123, 124
- nitration with *p*-nitrobenzoyl nitrate, 101
- nitration with nitronium salts in organic solvents, 61–72, 118–20
- nitration with 1-nitropyridinium salts, 72–3
- nitric acid, electrical conductivity, 6; freezing point, 6; infra-red spectrum, 7; monohydrate, 21; nitration in, 6–12; Raman spectrum, 7; reaction with acetic anhydride, 76–7, 79–82; state of, 6–7; state of, in inert organic solvents, 32; ultra-violet spectrum, 13–14
- nitric acid, solution in acetic acid, electrical conductivity of, 32; freezing point of, 32; infra-red spectrum of, 32; nitration with, 32–46; Raman spectrum of, 32
- nitric acid, solution in carbon tetrachloride, infra-red spectrum of, 32; nitration with, 32–46
- nitric acid, solution in chloroform, infra-red spectrum of, 32; Raman spectrum of, 32
- nitric acid, solution in dioxan, freezing point of, 32; infra-red spectrum of, 32
- nitric acid, solution in ether, freezing point of, 32; infra-red spectrum of, 32
- nitric acid, solution in nitromethane, nitration with, 32–48; Raman spectrum of, 32
- nitric acid, solution in perchloric acid, 14–15, 27–9
- nitric acid, solution in sulpholan, nitration with, 32–48
- nitric acid, solution in sulphuric acid, 13–15, 20–1; electrical conductivity of, 14; freezing point of, 14; infra-red spectrum of, 13; nitration with, 13–29; Raman spectrum of, 13, 19, 21; ultra-violet spectrum of, 13–14, 20–1; vapour pressure, 21
- nitric acidium ion, 7, 10, 12, 21, 43–5, 56
- nitric oxide, 50
- nitrite ion, anticycatalysis of nitration by, 56
- nitronium ion, from dinitrogen pentoxide, 51, 53–4; in nitration, 6, 108–16; in nitric acid solutions, 6–12; in organic solvents, 39, 48, 69–70; in solutions of sulphuric acid in nitric acid, 13–25, 48; infra-red spectrum of, 13; Raman spectrum, 7, 13; ultraviolet spectrum of, 20–1
- nitronium salts, 2, 14–15, 61; from dinitrogen pentoxide, 51, 61; from dinitrogen tetroxide, 50; nitration with, 61–72
- 1-nitropyridinium salts, 61; nitration with, 72–3
- nitrosation, nitration through, 2, 50, 57–60, 82, 91–2, 96–8, 135; nitration through, and M.O. theories of reactivity, 135; with dinitrogen trioxide, 50
- nitrosonium ion, 50, 54–5, 56, 59, 97
- nitrous acid, anticycatalysis of nitration by, 12, 54–7, *A*; catalysis of nitration by, 57; in mixture of nitric acid and acetic anhydride, 81–2; state in solvents, 54–5
- nitrous acidium ion, 55
- nitrous oxide, 50
- non-alternant hydrocarbons, 130
- orientation of substitution, and nitration of bases, 159–61
- ortho:para* ratio, in nitration, effect of dipolar substituents, 177; of anisole, 94–6; of benzamide, 177; of benzoic acid, 177; of benzonitrile, 177; of benzyl chloride, 100; of benzyl cyanide, 100; of benzyl methyl ether, 100; of biphenyl, 200, 202; of dialkylnitrobenzenes, 189–90; of 2,5-dihalogenonitrobenzenes, 190; of ethyl benzoate; 177; of ethyl phenylacetate, 100; of methyl 2-phenethyl ether, 99–103; of methyl 3-phenpropyl ether, 100; of nitrobenzene, 177; of phenol, 57, 96–8; of phenylboronic acid, 98–9; of phenylnitromethane, 100; of toluene, 100; with acetyl nitrate in acetic anhydride, 93–103; with benzoyl nitrate, 93, 94; with dinitrogen pentoxide, 93

- oxygen exchange, between nitric acid and water, 10, 11
- oxynitration, 3
- partial rate factors, 4; and reactivity numbers, 132; for nitration of alkylbenzenes, 64, 164; for nitration of anilinium ion, 170, 174–6; for nitration of benzylic compounds, 166; for nitration of biphenyl, 202; for nitration of compounds with dipolar substituents, 178–9; for nitration of halogenobenzenes, 181; for nitration of 1-hydroxy-2-phenylpyridinium ion, 207; for nitration of 4-hydroxyquinoline, 216; for nitration of naphthalene, 204; for nitration of nitrobiphenyls, 202; for nitration of 2-phenylpyridinium ion, 207; for nitration of polycyclic hydrocarbons, 206; for nitration of positive poles, 170–1; for nitration of quinolinium ion, 212; for nitration of substituted-alkylbenzenes, 166; for nitration of toluene, 64, 73, 124; for reactions of toluene, 124
- positive poles, nitration of, 16, 167–76, *A*
- quaternary salts, and nitration of bases, 153–4
- rate of nitration, of anilinium ion, 170, 174–6; of azanaphthalenes, 209–11; of compounds with dipolar substituents, 178–9; of halogenobenzenes, 181; of positive poles, 170–1
- rate of nitration, relative, of alkylbenzenes, 63; of biphenyl, 202; of compounds with dipolar substituents, 178–9; of halogenobenzenes, 67–181; of nitrobiphenyls, 202; of polyphenyls, 203; of positive poles, 172–4; of toluene, 62, 63, 73
- rate profiles, for nitration in perchloric acid, 25
- rate profiles, for nitration in sulphuric acid, 17, 20, 23, 24, 26, 28; of bases, 147–53
- reactivities, relative, determination by competition, 62–72; of alkylbenzenes, 62–6, 164; of benzylic compounds, 166; of halogenobenzenes, 63; of positive poles, 172–4; of substituted-alkylbenzenes, 165–6; of toluene, 62–6; of toluene, and selectivity, 140–3
- reactivity numbers, 132–5; and partial rate factors, 132
- resonance theory, 126–9
- salts, effect on nitration rate, 41
- selectivity, and linear free energy relationships, 140–3; and reactivity, 140–3; inter-molecular, 62–72, 119–20; intramolecular, 62–72, 119–20
- self-atom polarizabilities, 130, 182
- steric effects, in nitration of alkylbenzenes, 165
- substituent effects, and Hammett's equation, 137–43; and linear free energy relationships, 138–43; and  $\rho^+\sigma^+$  equation, 138–43; quantitative correlations of, 136–43
- substitution, mechanism of, 107–8
- sulphuric acid, catalyst for nitration, 8, 40, 43–6, 89
- theoretical organic chemistry, and nitration, 3
- transition state, Wheland model, 131–3
- transition state theory, 22; of aromatic substitution, 127, 128–9, 131–5
- urea, effect on nitration rate, 41; suppression of nitrosation, 60
- water, effect on nitration kinetics, 42, 44–6; effect on nitronium ion concentration, 19–26; retardation of nitration by, 9, 15, 19–26
- Wheland intermediate, 129
- zeroth order nitration, and relative reactivities, 46; effect of nitrate on, 41, 42, 43–6; effect of sulphuric acid on, 40–1, 43–6; effect of urea on, 41; effect of water on, 42, 44–6; in acetic acid, 32–9, 40, 55–6; in acetic anhydride, 86–8; in aqueous nitric acid, 11–12; in carbon tetrachloride, 32–9, 87, 88; in nitromethane, 32–9, 40, 41, 55–6, 87, 88; in sulpholan, 32–9, 87, 88
